Final Report
on the RTS on the European Single Electronic Format

Table of Contents

1 Executive Summary

Reasons for publication

Based on article 4(7) of the Transparency Directive 2004/109/EC (TD) as last amended by Directive 2013/50/EU, the European Securities and Markets Authority (ESMA) is required to develop a draft Regulatory Technical Standard (RTS) specifying the electronic reporting format in which issuers should prepare their annual financial reports (AFRs) from 1 January 2020.

Contents

Section 2 of this final report summarises the ESMA legal mandate, the steps taken in the consultation and its outcome. The consultation process and its outcome are set out in more detail in the Feedback Statement[1] on the consultation on the RTS on ESEF, which was already published on 21 December 2016. This report should be read in conjunction with the Feedback Statement.

Furthermore, this report explains in Section 3 the steps followed to develop the detailed technical specifications necessary for the implementation of the European Single Electronic Format (ESEF).

Section 4 briefly summarises the field tests conducted for the purpose of testing the technical solution proposed in the draft RTS. Annex II contains the full text of the draft RTS.

Next Steps

ESMA has submitted this Final Report to the European Commission (EC). The EC has three months to decide whether to endorse the technical standard.

2 Background

1. Article 4(7) of the TD as last amended on 6 November 2013 assigns ESMA with the responsibility to draft an RTS specifying a European Single electronic format (ESEF) in which all annual financial reports of issuers with securities listed on regulated markets shall be prepared. The RTS shall apply to annual financial reports containing financial statements for financial years beginning on or after 1 January 2020.

2. According to the TD ESMA is required to:

    i. make due reference to current and future technological options;

    ii. carry out an adequate assessment of possible electronic reporting formats;

    iii. conduct appropriate field tests.

3. Article 10 of the ESMA Regulation[2] requires ESMA, where appropriate, to conduct public consultations on draft technical standards, analyse the potential related costs and benefits, and request the opinion of the SMSG.

4. ESMA has published a Consultation Paper (CP) on the draft RTS on ESEF on 25 September 2015[3]. The feedback received on the CP was analysed and summarised in a Feedback Statement published on 21 December 2016. Based on the outcome of the consultation, the Feedback Statement set out the cornerstones of the draft RTS, which are as follows:

    i. All annual financial reports shall be prepared in XHTML.

    ii. Where the annual financial report contains IFRS consolidated financial statements, these shall be labelled with XBRL tags, which shall be embedded in the XHTML document using the Inline XBRL technology.

    iii. For the first two years, only the primary financial statements shall be mandatorily marked up; afterwards the entire set of IFRS consolidated financial statements shall be marked with XBRL tags.

    iv. The IFRS Taxonomy, issued by the IFRS Foundation has been specifically developed to mark-up IFRS financial statements in a structured electronic format. It is therefore appropriate to use the IFRS Taxonomy to mark up the IFRS consolidated financial statements.

5. This report should be read in conjunction with the Feedback Statement. The Feedback Statement includes also a position paper by the Securities Markets Stakeholder Group (SMSG), which is the key ESMA stakeholder consultative body composed of 30 individuals from 17 Member States representing academics, consumers, financial institution employees, financial market participants, small and medium sized enterprises as well as users of financial information. According to Article 37(1) of the ESMA Regulation, ESMA shall require the SMSG to give its advice on any consultation related to RTS. Furthermore, the Feedback Statement also contains a Cost-Benefit Analysis (CBA) of the draft RTS.

6. According to Article 4(7) of the TD, ESMA should submit its draft regulatory technical standard to the Commission at the latest by 31 December 2016. However, due to significant budgetary restrictions, ESMA's Board of Supervisors decided in January 2015 to postpone the IT projects related to the requirements in the amended TD, including the work on the RTS on ESEF, beyond 31 December 2016. ESMA informed[4] the European Commission that the submission of the RTS would be delayed.

3 Implementing technical specifications

Assessment of implementation options

7. In addition to the cornerstones of the RTS that were already set out in the Feedback Statement, further detailed implementing technical specifications had to be developed to ensure consistency, accuracy, completeness, comparability and further usability of the data in ESEF. In the course of this work, the following matters had to be considered:

    i. Whether the IFRS Taxonomy should be extended with a regulatory extension taxonomy – and if so whether it should be an extensive taxonomy (business extension) or a very limited and simple extension taxonomy (technical extension);

    ii. Whether issuers should be allowed to extend the taxonomy by themselves and if so, whether they should have absolute liberty to do so or whether a framework should be developed to guide this activity (controlled extensions);

    iii. Whether all information in the financial statements should be marked up in detail or whether entire sections in the financial statements should be marked up with one markup (block tagging) only.

8. To develop the implementing technical specifications, ESMA commissioned a study to assess different implementation approaches for ESEF based on a scoring model (the study is included in this Final Report as Annex III). In the first step, assessment criteria

[4] Letter to the European Commission from 21 December 2016, ESMA/2016/1621 https://www.esma.europa.eu/sites/default/files/library/2016-esma-1621_letter_to_ec_regarding_postponement_of_esef_rts.pdf

were defined and afterwards it was assessed to which extent the different implementation options would fulfil the defined criteria. The criteria had different weights to reflect their relative importance and are presented in Table 1 below.

	Criteria		Weight
1	Availability of data for automated processing		1.00
2	Data comparability and analytical possibilities		1.00
3a	Effort on filers side	one-off	0.50
3b		ongoing	0.50
4a	ESMA effort	to define	0.50
4b		to maintain	0.25
5	Effort required to validate for correctness and completeness		0.25
6	Definition and execution of data quality checks		0.25
7	Risk of untagged but possible to tag or wrongly tagged data		0.25
8	Common practice compatibility		0.25

Table 1 'Criteria used in the scoring model'

9. The outcome of this scoring model can be summarised as follows:

   i. A limited and simple technical regulatory extension taxonomy should be prepared.

   ii. When preparing taxonomies, it is very difficult to foresee all the possible ways in which issuers might present their financial statements. Therefore, issuers should be allowed to extend the IFRS Taxonomy if necessary. However, there should be guidance as to how issuers create extensions to the applicable taxonomy (controlled extensions), otherwise the data risks becoming difficult to be consumed.

   iii. In the primary financial statements (statement of financial position, statement of profit or loss and other comprehensive income, statement of changes in equity and the statement of cash flows) each number should be separately 'tagged' (i.e. marked up with machine-readable XBRL meta-data). Thus, the primary financial statements are marked up in detail. In the notes to the financial statements, entire sections could be marked up with one single tag (block tagging).

Development of the implementing technical specifications

10. Based on the outcome of the study assessing different implementation options, ESMA developed the implementing technical specifications. This includes the development of the regulatory extension taxonomy, of guidance how to create extensions to the applicable taxonomy and detailed guidance which disclosures in the financial statements should be marked up and with which level of granularity.

11. In addition to that, in order to ensure metadata and data consistency, accuracy, completeness, stability, comparability and further usability of the data in the European Single Electronic Format, ESMA developed rules regarding the expected syntax and structure of Inline XBRL reports (filing rules).

12. To develop the implementing technical specifications, ESMA undertook the following activities:

    i. As the regulatory extension taxonomy would extend the IFRS Taxonomy prepared by the IFRS Foundation, ESMA carried out on 16 March 2017 a workshop with the IFRS Foundation's taxonomy team to discuss scope and design of the regulatory extension taxonomy;

    ii. As the implementing technical specifications may impact how the annual financial reports are processed by the Officially Appointed Mechanisms, their input was gathered in two workshops on ESMA's premises (21 September 2016 and 18 May 2017);

    iii. Public working drafts of the implementing technical specifications were published on the Eurofiling website[5] on 25 May 2017 and discussed in a public workshop in the margins of the Eurofiling XBRL Week conference on 6 June 2017.

13. The key messages received as part of these activities were as follows:

    i. It would be highly beneficial if the regulatory extension taxonomy included labels in all official EU languages and – if at a future point in time necessary - took into account deviations of IFRS as applicable in the EU from IFRS as issued by the IASB;

    ii. Initially, ESMA considered to develop technical specifications based on the Global Filing Manual (GFM) which was prepared in 2011 as a joint effort of the the IFRS Foundation, U.S. Securities and Exchange Commission and the Japan Financial Supervision Authority to harmonise rules for XBRL filings to regulators. However, ESMA received the feedback that while the GFM has its merits, it has not been maintained. Since its publication, the XBRL community has produced guidance documents that define best practices on a number of topics covered by the GFM through working groups of XBRL International. In the course of this work, a number of the filing rules contained in the GFM have been deemed unnecessary or a need was identified to simplify them to increase their understandability. Furthermore, it was recommended to consider which rules primarily address issuers and therefore business topics such as the selection of appropriate taxonomy elements to mark up the financial statements and which rules are of a more

---

[5] Under the following link: http://standards.eurofiling.info/

technical nature and are more relevant for software vendors. Finally, it was recommended to limit the number of the filing rules as much as possible, as filing rules add burden to implementers;

iii. It would be beneficial to use the Legal Entity Identifier (LEI) to identify the issuer and to include the LEI taxonomy in the regulatory extension taxonomy;

iv. It was recommended to include in the draft RTS a requirement to anchor extension elements created by issuers to the IFRS Taxonomy.

14. All these points described above were taken into account in the finalisation of the draft RTS. In addition to that, ESMA prepared an ESEF Reporting Manual[6] in which it provides guidance on common issues encountered when generating Inline XBRL instance documents and explains how to resolve them. The purpose of this document is to promote a harmonised and consistent approach for the preparation of annual financial reports in ESEF.

4 Field tests

15. According to Article 4(7) of the TD, before the adoption of the draft regulatory technical standards, ESMA shall conduct appropriate field tests of the ESEF specifications. ESMA carried out these field tests from June to September 2017. The purpose of the field tests was to assess whether the considered draft rules were practicable and to determine if and to what extent they have to be improved in order to increase the usefulness of the data in the ESEF and to reduce the burden on preparers.

16. The field tests were designed as a hands-on exercise in which IFRS consolidated financial statements of 25 European volunteer issuers were transformed into Inline XBRL according to ESMA's draft ESEF specifications. For this purpose, ESMA organised six on-site workshops that lasted 1.5 days each where XBRL experts provided by ESMA supported the participating issuers to create IFRS consolidated financial statements in Inline XBRL format.

17. In order to transform the annual financial reports to the Inline XBRL format, software tools were used. To select the software tools on a non-discriminatory and non-preferential basis, ESMA issued a public call for software vendors to participate in the field-tests.

18. A survey launched after the completion of the exercise revealed that participants were highly satisfied with the field tests and the overall complexity of the tagging effort was

---

considered moderate to low. Furthermore, the participants deemed the core taxonomy satisfactorily complete although some of them found it not easy to browse and search it.

19. The results of the workshop and of the survey launched afterwards allowed ESMA to conclude that the effort to prepare AFRs in Inline XBRL can be considered to be moderate, especially considering that most participants had limited or no knowledge of XBRL and that the effort to prepare the first filing is significantly higher than the effort necessary in the following years.

20. The conclusions of the field tests were used to further improve the draft specifications. For further details on design and outcome of the field tests refer to the report on the field tests in Annex IV.

5 Annexes

5.1 Annex I - Legislative mandate to develop a draft RTS on ESEF

1. Regulation (EU) No 1095/2010 (ESMA Regulation) establishing the European Securities and Markets Authority empowers ESMA to develop draft regulatory technical standards where the European Parliament and the Council delegate power to the Commission to adopt regulatory standards by means of delegated acts under Article 290 TFEU.

2. Directive 2013/50/EC of the European Parliament and of the Council of 22 October 2013 amending Directive 2004/109/EC (the Transparency Directive) of the European Parliament and of the Council on the harmonisation of transparency requirements in relation to information about issuers whose securities are admitted to trading on a regulated market, inserted the following paragraphs into Directive 2004/109/EC conferring powers on ESMA to draft an RTS regarding the format of annual financial reports:

3. Article 4.7

   'With effect from 1 January 2020 all annual financial reports shall be prepared in a single electronic reporting format provided that a cost-benefit analysis has been undertaken by the European Supervisory Authority (European Securities and Markets Authority) established by Regulation (EU) No 1095/2010 of the European Parliament and of the Council.

   ESMA shall develop draft regulatory technical standards to specify the electronic reporting format, with due reference to current and future technological options. Before the adoption of the draft regulatory technical standards, ESMA shall carry out an adequate assessment of possible electronic reporting formats and conduct appropriate field tests. ESMA shall submit those draft regulatory technical standards to the Commission at the latest by 31 December 2016'.

5.2 Annex II – Draft RTS on ESEF

Draft

COMMISSION DELEGATED REGULATION (EU) …/..

of […]

supplementing Directive 2004/109/EC of the European Parliament and of the Council with regard to regulatory technical standards on the specification of a single electronic reporting format

(Text with EEA relevance)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Directive 2004/109/EC of the European Parliament and of the Council of 15 December 2004 on the harmonisation of transparency requirements in relation to information about issuers whose securities are admitted to trading on a regulated market and amending Directive 2001/34/EC [7], and in particular Article 4(7) thereof,

Whereas:

(1)   Directive 2004/109/EC requires issuers whose securities are admitted to trading on a regulated market to make public their annual financial reports.

(2)   Issuers should prepare their entire annual financial reports in the Extensible Hypertext Markup Language (XHTML) format. As a non-proprietary electronic reporting format, XHTML is freely usable, and is human-readable without specialised software.

(3)   Regulation (EC) No 1606/2002 of the European Parliament and of the Council [8] requires companies governed by the law of a Member State whose securities are admitted to trading on a regulated market in any Member State to prepare their consolidated financial statements in accordance with International Accounting Standards which are commonly referred to as International Financial Reporting Standards ('IFRS') adopted pursuant to Regulation (EC) No 1606/2002. Commission Decision 2008/961/EC [9] provides that a third country issuer listed in the Union may also prepare its consolidated

[8]   Regulation (EC) No 1606/2002 of the European Parliament and of the Council of 19 July 2002 on the application of international accounting standards (OJ L 243, 11.9.2002, p. 1).

[9]   Commission Decision of 12 December 2008 on the use by third countries' issuers of securities of certain third country's national accounting standards and International Financial Reporting Standards to prepare their consolidated financial statements (OJ L 340, 19.12.2008, p. 112).

financial statements in accordance with IFRS as issued by the International Accounting Standards Board ('IASB').

(4)   The adoption and use of IFRS aims at ensuring a high level of transparency and comparability of financial statements. In order to further facilitate their accessibility, analysis and comparability, consolidated financial statements in annual financial reports prepared under IFRS adopted pursuant to Regulation (EC) No 1606/2002 and consolidated financial statements prepared under IFRS as issued by the IASB (both are in the following referred to as IFRS consolidated financial statements) should be marked up using eXtensible Business Reporting Language (XBRL) markups so as to be machine-readable. XBRL is well-established and in use in a number of jurisdictions and is currently the only appropriate markup language to mark up financial statements.

(5)   For the same reasons of improved transparency, accessibility, analysis and comparability, where the laws of Member States in which issuers are incorporated permit or require the marking up of parts of annual financial reports other than the IFRS consolidated financial statements, issuers should use XBRL for the marking up of those parts.

(6)   A cost-benefit analysis performed by European Securities and Markets Authority (ESMA) supported the use of Inline XBRL for embedding XBRL markups in XHTML documents. Accordingly, Inline XBRL technology should be used.

(7)   The use of XBRL markup language involves the application of a taxonomy to convert human-readable text to machine-readable information. The IFRS Taxonomy made available by the IFRS Foundation is a well established taxonomy developed to mark up IFRS disclosures. The use of the IFRS Taxonomy facilitates comparability of markups of financial statements drawn up in accordance with IFRS on a global level. Accordingly, the core taxonomy to be used for the European Single Electronic Format should be based on the IFRS Taxonomy and be an extension of it.

(8)   In order to take into account any future adoption of IFRS pursuant to Regulation (EC) No 1606/2002, changes to the XBRL specifications or other technical developments, or to extend the requirements to mark up information in the annual financial report, the provisions of this Regulation should be updated periodically on the basis of draft regulatory technical standards prepared by ESMA.

(9)   The taxonomy for the use of XBRL markup language is accessed in the form of a set of electronic XBRL files ('XBRL taxonomy files') which provide a structured representation of the elements that substantively constitute the core taxonomy. The hierarchy of elements and their appropriate data type should be made available to issuers in a simple human-readable form in this Regulation. In order to facilitate the accessibility, analysis and comparability of annual financial reports in practice, it is of high importance that issuers use XBRL taxonomy files that are compliant with all relevant technical and legal requirements. To help this objective, ESMA should publish the XBRL taxonomy files on its website in machine-readable and freely downloadable format.

(10)   Where the laws of Member States transposing Directive 2004/109/EC permit or require the marking up of any parts of annual financial reports other than the IFRS consolidated financial statements therein, those Member States should ensure that a suitable taxonomy is available and used by issuers for marking up those parts.

(11)   For the reasons of transparency, accessibility, analysis and comparability, issuers should be free to mark up disclosures in their IFRS consolidated financial statements in as much detail as may be technically possible. For the same reasons, compulsory standards for the minimum granularity of markups should also be laid down. With

regard to the primary financial statements in IFRS consolidated financial statements, a standard of detailed tagging should apply whereby those primary financial statements are fully marked up. With regard to the notes to IFRS consolidated financial statements, a standard of block tagging should apply where whole sections of those notes are each to be marked up using single taxonomy elements. The requirement for block tagging, however, should not limit the discretion of issuers to mark up notes to IFRS consolidated financial statements with a higher level of granularity.

(12)   In order to facilitate the effective implementation of a single electronic reporting format, detailed provisions on the use of Inline XBRL technology should be set out. To assist issuers and software firms developing software used for the preparation of annual financial reports in Inline XBRL, ESMA should provide guidance on common issues encountered when generating Inline XBRL instance documents.

(13)   As provided for in Article 4(7) of Directive 2004/109/EC, this Regulation should apply to annual financial reports containing financial statements for financial years beginning on or after 1 January 2020. However, in order to facilitate the smooth implementation of financial reporting in a machine readable format, and in particular to allow issuers reasonable time to adapt to the use of XBRL technology, the mandatory marking up of notes to financial statements should apply only in respect of annual financial statements for financial years beginning on or after 1 January 2022.

(14)   This Regulation is based on the draft regulatory technical standards submitted by ESMA to the Commission.

(15)   In developing the draft regulatory technical standards on which this Regulation is based, ESMA cooperated regularly and closely with the European Banking Authority and the European Insurance and Occupational Pensions Authority, in order to take into account the specific characteristics of the banking, financial intermediary and insurance sectors, so as to ensure cross-sectoral consistency of work and the reaching of joint positions.

(16)   ESMA has conducted open public consultations on the draft regulatory technical standards on which this Regulation is based, analysed the potential related costs and benefits, requested the opinion of the Securities and Markets Stakeholder Group established by Article 37 of Regulation (EU) No 1095/2010 of the European Parliament and of the Council[10] and carried out field tests,

HAS ADOPTED THIS REGULATION:

Article 1

The European Single Electronic Format

---

[10]   Regulation (EU) No 1095/2010 of the European Parliament and of the Council of 24 November 2010 establishing a European Supervisory Authority (European Securities and Markets Authority), amending Decision No 716/2009/EC and repealing Commission Decision 2009/77/EC (OJ L 331, 15.12.2010, p. 84).

The European Securities and Markets Authority (ESMA) shall specify the single electronic reporting format, the European Single Electronic Format (ESEF), to be used for the preparation of annual financial reports by issuers.

Article 2

Definitions

For the purposes of this Regulation, the following definitions shall apply:

1. 'core taxonomy' means the combined set of the taxonomy elements set out in Annex VI and the following collection of links:
   a. presentation linkbase, which groups the taxonomy elements;
   b. calculation linkbase, which expresses arithmetic relationships between taxonomy elements;
   c. label linkbase, which describes the meaning of each taxonomy element;
   d. definition linkbase, which reflects dimensional relationships of the core taxonomy elements;
2. 'extension taxonomy' means the combined set of taxonomy elements and the following collection of links both created by the issuer:
   a. presentation linkbase, which groups the taxonomy elements;
   b. calculation linkbase, which expresses arithmetic relationships between taxonomy elements;
   c. label linkbase, which describes the meaning of each taxonomy element;
   d. definition linkbase, which ensures dimensional validity of the resulting XBRL instance document against the extension taxonomy;
3. 'IFRS consolidated financial statements' means consolidated financial statements prepared in accordance with either IFRS adopted pursuant to Regulation (EC) No 1606/2002 or IFRS as referred to in point (a) of the first subparagraph of Article 1 of Decision 2008/961/EC.

Article 3

Single electronic reporting format

Issuers shall prepare their entire annual financial reports in XHTML format.

Article 4

Marking up IFRS consolidated financial statements

1. Where annual financial reports include IFRS consolidated financial statements, issuers shall mark up those consolidated financial statements.
2. Issuers shall, as a minimum, mark up the disclosures specified in Annex II where those disclosures are present in those IFRS consolidated financial statements.
3. Issuers may mark up disclosures presented in IFRS consolidated financial statements other than those set out in paragraph 2.
4. For markups set out in paragraph 1, 2 and 3, issuers shall use the XBRL markup language and shall use a taxonomy in which the elements shall be those set out in the core taxonomy. Where, in accordance with point 4 in Annex IV, it is not appropriate to use elements in the core taxonomy, issuers shall create extension taxonomy elements as provided for in Annex IV.

Article 5

Marking up other parts of the annual financial reports

1. Issuers incorporated in Member States may mark up all parts of their annual financial reports other than those set out in Article 4 if they use the XBRL markup language and a taxonomy specific to these parts and that taxonomy is provided by the Member State in which they are incorporated.
2. Issuers incorporated in third countries shall not mark up any parts of their annual financial reports other than IFRS consolidated financial statements.

Article 6

Common rules on markups

For markups made in accordance with Articles 4 and 5, issuers shall comply with the following:

a) embedding of markups in the issuers' annual financial reports in XHTML format using the Inline XBRL specifications set out in Annex III;

b) requirements on marking up and filing rules set out in Annex IV.

Article 7

XBRL taxonomy files

ESMA may publish machine-readable and downloadable XBRL taxonomy files based on the core taxonomy. Those files shall comply with the criteria set out in Annex V.

Article 8

Entry into force and application

This Regulation shall enter into force on the twentieth day following that of its publication in the *Official Journal of the European Union*.

It shall apply to annual financial reports containing financial statements for financial years beginning on or after 1 January 2020.

This Regulation shall be binding in its entirety and directly applicable in all Member States.

Legend for Tables 1 and 2 of Annex II, Table 1 of Annex IV and Table 1 of Annex VI

DATA/ATTRIBUTE TYPE/PREFIX	DEFINITION
text block	denotes that the element type is a block of text; it is used to mark up larger pieces of information, such as notes, accounting policies or tables; text blocks are non-numeric line items
text	denotes that the element type is text (a sequence of alphanumeric characters); it is used to mark up short pieces of narrative information; text elements are non-numeric line items
yyyy-mm-dd	denotes that the element type is a date; these elements are line items and non-numeric
X	denotes that the element type is monetary (a number in a declared currency); these elements are numeric line items
X.XX	denotes that the element type is a decimalised value (such as a percentage or a 'per share' value); these elements are numeric line items
shares	denotes that the element type is a number of shares; these elements are numeric line items
table	denotes the beginning of a structure represented by a table where rows and columns contribute to definition of an financial concept on their intersection
axis	denotes a dimensional property in a tabular structure
member	denotes a member of a dimension on an axis
guidance	denotes an element that supports browsing of taxonomy content
role	denotes an element representing a section of a taxonomy, e.g. statement of financial position, income statement, each individual note, etc.
abstract	denotes a grouping element or a header

instant or duration	denotes that the monetary value represents a stock (if instant) or a flow (if duration)
credit or debit	denotes the 'natural' balance of the disclosure

Mandatory markups

1. Issuers shall mark up all numbers in a declared currency disclosed in the statement of financial position, the statement of profit or loss and other comprehensive income, the statement of changes in equity and the statement of cash flows in IFRS consolidated financial statements.

2. Issuers shall mark up all disclosures made in IFRS consolidated financial statements or made by cross-reference therein to other parts of the annual financial reports for financial years beginning on or after 1 January 2020 that correspond to the elements in Table 1 of this Annex.

3. Issuers shall mark up all disclosures made in IFRS consolidated financial statements or made by cross-reference therein to other parts of the annual financial reports for financial years beginning on or after 1 January 2022 that correspond to the elements in Table 2 of this Annex.

ANNEX III

Applicable Inline XBRL specifications

1. Issuers shall ensure that the Inline XBRL instance document is valid with respect to the Inline XBRL 1.1 specification and is conform to the XBRL Units Registry.

2. Issuers shall ensure that the issuer's XBRL extension taxonomy files are valid with respect to the XBRL 2.1 and the XBRL Dimensions 1.0 specifications.

3. Issuers shall submit the Inline XBRL instance document and the issuer's XBRL extension taxonomy files as a single reporting package where XBRL taxonomy files are packaged according to the Taxonomy Packages specifications.

4. Issuers shall ensure that both the Inline XBRL instance document and the issuer's extension taxonomy respects requirements of the mark up and filing rules set out in Annex IV.

ANNEX IV

Marking up and filing rules

1. Issuers shall ensure that the Inline XBRL instance document contains data of a single issuer, so that all entity identifiers in contexts shall have identical content.

2. Issuers shall identify themselves in the Inline XBRL instance document using ISO 17442 legal entity identifiers on the XBRL context entity identifiers and schemes.

3. When marking up disclosures, issuers shall use the core taxonomy element with the closest accounting meaning to the disclosure being marked up. Where there appears to

be a choice of core taxonomy elements, issuers should select the element with the narrowest accounting meaning and/or scope.

4. If the closest core taxonomy element would misrepresent the accounting meaning of the disclosure being marked up as required by point 3, issuers shall create an extension taxonomy element and use that to mark up the disclosure concerned. All extension taxonomy elements created shall

   a) not duplicate the meaning and scope of any core taxonomy element;
   b) identify the creator of the element;
   c) be assigned with an appropriate balance attribute;
   d) have standard labels in the language corresponding to the language of the annual financial report. Labels in additional languages are recommended to be added. All labels shall correspond to the accounting meaning and scope of the described underlying business concepts.

5. Issuers shall ensure that each extension taxonomy element used to mark up a disclosure in the annual financial report is included in at least one hierarchy of the presentation linkbase and of the definition linkbase of the extension taxonomy.

6. Issuers shall use the calculation linkbases of their extension taxonomies to document arithmetical relationships between numeric core and/or extension taxonomy elements, in particular for arithmetic relationships between core and/or extension taxonomy elements from the statement of financial position, statement of profit or loss and other comprehensive income, statement of changes in equity and statement of cash flows.

7. To identify to which part of the financial statements the markups relate, issuers shall use dedicated root taxonomy elements as starting points for the respective parts of the financial statements in their extension taxonomy's presentation linkbases. The element names, labels and prefixes of these root taxonomy elements shall be as set out in the Table 1.

Table 1

Element names, labels and prefixes of the root elements

Prefix	Element name	Label
ifrs-full	StatementOfFinancial PositionAbstract	Statement of financial position placeholder - this item MUST be used as a starting point for the statement of financial position
ifrs-full	IncomeStatement Abstract	Profit or loss placeholder - this item MUST be used as a starting point for the statement of profit or loss if the statement of profit or loss is disclosed separately
ifrs-full	StatementOfCompre hensiveIncomeAbstract	Statement of comprehensive income placeholder - this item MUST be used as a starting point for the statement of comprehensive income if it is disclosed separately or when the statement of profit or loss and other comprehensive income statement are combined in a single statement
ifrs-full	StatementOfCash FlowsAbstract	Statement of cash flows placeholder - this item MUST be used as a starting point for the statement of cash flows

ifrs-full	StatementOfChangesIn EquityAbstract	Statement of changes in equity placeholder - this item MUST be used as a starting point for the statement of changes in equity
esef_cor	NotesAccountingPolicies AndMandatoryTags	Notes, accounting policies and mandatory core taxonomy elements placeholder – this item MUST be used as a starting point for markups of disclosures in the notes to the financial statements

The dedicated root taxonomy elements shall also be included in the XBRL taxonomy files prepared by ESMA.

8. In their extension taxonomies, issuers shall not replace the labels or references of core taxonomy elements. Issuer specific labels may be added to the core taxonomy elements.

9. Issuers shall ensure that the issuer's extension taxonomy elements marking up the IFRS consolidated financial statements' statement of financial position, statement of profit or loss and other comprehensive income, statement of changes in equity and statement of cash flows are anchored to one or more core taxonomy elements. In particular:

   a) the issuer shall anchor its extension taxonomy element to the core taxonomy element having the closest wider accounting meaning and/or scope to that extension taxonomy element of the issuer. The issuer shall identify the relationship of the extension taxonomy element concerned with the core taxonomy element concerned in the issuer's extension taxonomy's definition linkbase. The extension taxonomy element shall appear as the target of the relationship;

   b) the issuer may anchor the extension taxonomy element to the core taxonomy element or elements having the closest narrower accounting meaning and/or scope to that extension taxonomy element concerned. The issuer shall identify the relationship of the extension taxonomy element concerned with the core taxonomy element or elements concerned in the issuer's extension taxonomy's definition linkbase. The extension taxonomy element shall appear as the source of the relationship or relationships. Where the extension taxonomy element combines a number of core taxonomy elements, the issuer shall anchor that extension taxonomy element to each of those core taxonomy elements except any such core taxonomy element or elements, which are reasonably deemed to be insignificant.

10. Notwithstanding point 9, issuers do not need to anchor to another core taxonomy element an extension taxonomy element that is used to mark up a disclosure in the statement of financial position, statement of profit or loss and other comprehensive income, statement of changes in equity or the statement of cash flows that is a subtotal of other disclosures in the same statement.

11. Issuers shall ensure that the data type and period type of a taxonomy element used to mark up a disclosure reflects the accounting meaning of the marked up disclosure. Issuers shall not define and apply a custom type for a taxonomy element, if a suitable type is already defined by the XBRL specifications or in the XBRL Data Types Registry.

12.   When marking up disclosures, issuers shall not use numeric taxonomy elements to mark up different values for a given context (entity, period and dimensional breakdowns) unless the difference is a result of rounding related to presentation of the same information with different scale in more than one place in the same annual financial report.

13.   When marking up disclosures, issuers shall use non-numeric taxonomy elements in a way that it marks up all disclosures that match the definition of the respective element. Issuers shall not apply the markups only partially or selectively.

14.   Issuers shall ensure that the Inline XBRL instance document does not contain executable code.

Annex V

XBRL taxonomy files

XBRL taxonomy files published by ESMA shall:

(a) identify, as XBRL elements, all core taxonomy elements;
(b) set attributes of core taxonomy elements following their type as prescribed in Annex I;
(c) provide the human readable labels, as set out in Table 1 of Annex VI, documenting the meaning of the core taxonomy elements as well as references;
(d) define structures facilitating browsing of taxonomy content and understanding of the definition of a core taxonomy element in the context of other core taxonomy elements;
(e) define relationships that allow issuers to anchor extension taxonomy elements to core taxonomy elements;
(f) be valid according to XBRL 2.1. specifications, XBRL Dimensions 1.0 specifications and be packaged according to the Taxonomy Packages specifications as set out in Annex III;
(g) contain the technical information necessary for developing IT solutions supporting the production of harmonised annual financial reports;
(h) identify to which periods they refer.

Annex VI

ifrs-full	FinancialLiabilities	X instant credit	Financial liabilities	The amount of liabilities that are: (a) a contractual obligation: (i) to deliver cash or another financial asset to another entity; or (ii) to exchange financial assets or financial liabilities with another entity under conditions that are potentially unfavourable to the entity; or (b) a contract that will, or may be, settled in the entity's own equity instruments and is: (i) a non-derivative for which the entity is, or may be, obliged to deliver a variable number of the entity's own equity instruments; or (ii) a derivative that will, or may be, settled other than by the exchange of a fixed amount of cash or another financial asset for a fixed number of the entity's own equity instruments. For this purpose, rights, options or warrants to acquire a fixed number of the entity's own equity instruments for a fixed amount of any currency are equity instruments if the entity offers the rights, options or warrants pro rata to all of its existing owners of the same class of its own non-derivative equity instruments. Also, for those purposes the entity's own equity instruments do not include puttable financial instruments that are classified as equity instruments in accordance with paragraphs 16A-16B of IAS 32, instruments that impose on the entity an obligation to deliver to another party a pro rata share of the net assets of the entity only on liquidation and are classified as equity instruments in accordance with paragraphs 16C-16D of IAS 32, or instruments that are contracts for the future receipt or delivery of the entity's own equity instruments. As an exception, an instrument that meets the definition of a financial liability is classified as an equity instrument if it has all the features and meets the conditions in paragraphs 16A-16B or paragraphs 16C-16D of IAS 32. ifrs-full	HedgingInstrumentsMember	member	Hedging instruments [member]	This member stands for hedging instruments. A hedging instrument can be a designated: (a) derivative measured at fair value through profit or loss, except for some written options (see paragraph B6.2.4 of IFRS 9); (b) non-derivative financial asset or non-derivative financial liability measured at fair value through profit or loss, unless it is a financial liability designated as at fair value through profit or loss for which the amount of its change in fair value that is attributable to changes in the credit risk of that liability is presented in other comprehensive income in accordance with paragraph 5.7.7 of IFRS 9. For a hedge of foreign currency risk, the foreign currency risk component of a non-derivative financial asset or a non-derivative financial liability may be designated as a hedging instrument provided that it is not an investment in an equity instrument for which an entity has elected to present changes in fair value in other comprehensive income in accordance with paragraph 5.7.5 of IFRS 9. This member also represents the standard value for the 'Hedging instruments' axis if no other member is used.	diclosure: IFRS 7 23A - Effective 2018-01-01, diclosure: IFRS 7 24A - Effective 2018-01-01

ifrs-full	HeldtomaturityInvestments	X instant debit	Held-to-maturity investments	The amount of non-derivative financial assets with fixed or determinable payments and fixed maturity that an entity has the positive intention and ability to hold to maturity other than: (a) those that the entity upon initial recognition designates as at fair value through profit or loss; (b) those that the entity designates as available for sale; and (c) those that meet the definition of loans and receivables. An entity shall not classify any financial assets as held to maturity if the entity has, during the current financial year or during the two preceding financial years, sold or reclassified more than an insignificant amount of held-to-maturity investments before maturity (more than insignificant in relation to the total amount of held-to-maturity investments) other than sales or reclassifications that: (i) are so close to maturity or the financial asset's call date (for example, less than three months before maturity) that changes in the market rate of interest would not have a significant effect on the financial asset's fair value; (ii) occur after the entity has collected substantially all of the financial asset's original principal through scheduled payments or prepayments; or (iii) are attributable to an isolated event that is beyond the entity's control, is non-recurring and could not have been reasonably anticipated by the entity. 5.3 Annex III – Study 'Qualitative, Quantitative and Technological Assessment of the Appropriateness of the iXBRL Technology for the ESEF – Assessment of Implementation Approaches

The study was carried out for ESMA by Business Reporting – Advisory Group

Qualitative, quantitative and technological assessment of the appropriateness of the iXBRL technology for the ESEF

Assessment of implementation approaches

Index

1 Introduction

The European Securities and Markets Authority [ESMA] was empowered by Article 4(7) of the Amended Transparency Directive to draft a regulatory technical standard [RTS] specifying the European Single Electronic Format [ESEF] in which the annual financial reports of listed companies will have to be prepared and implemented across the EU.

Initially considered reporting formats were the Portable Document Format [PDF], Extensible Markup Language [XML], Extensible Business Reporting Language [XBRL] and Extensible HyperText Markup Language [XHTML] or HyperText Markup Language [HTML].

This document aims to describe and assess the approaches for implementation of the XBRL in form of Inline-XBRL [iXBRL] which enables embedding XBRL tags in XHTML.

1.1 Methodology

The process applied in selection of implementation approaches, definition of criteria for their evaluation and subsequent assessment is presented on Figure 1.
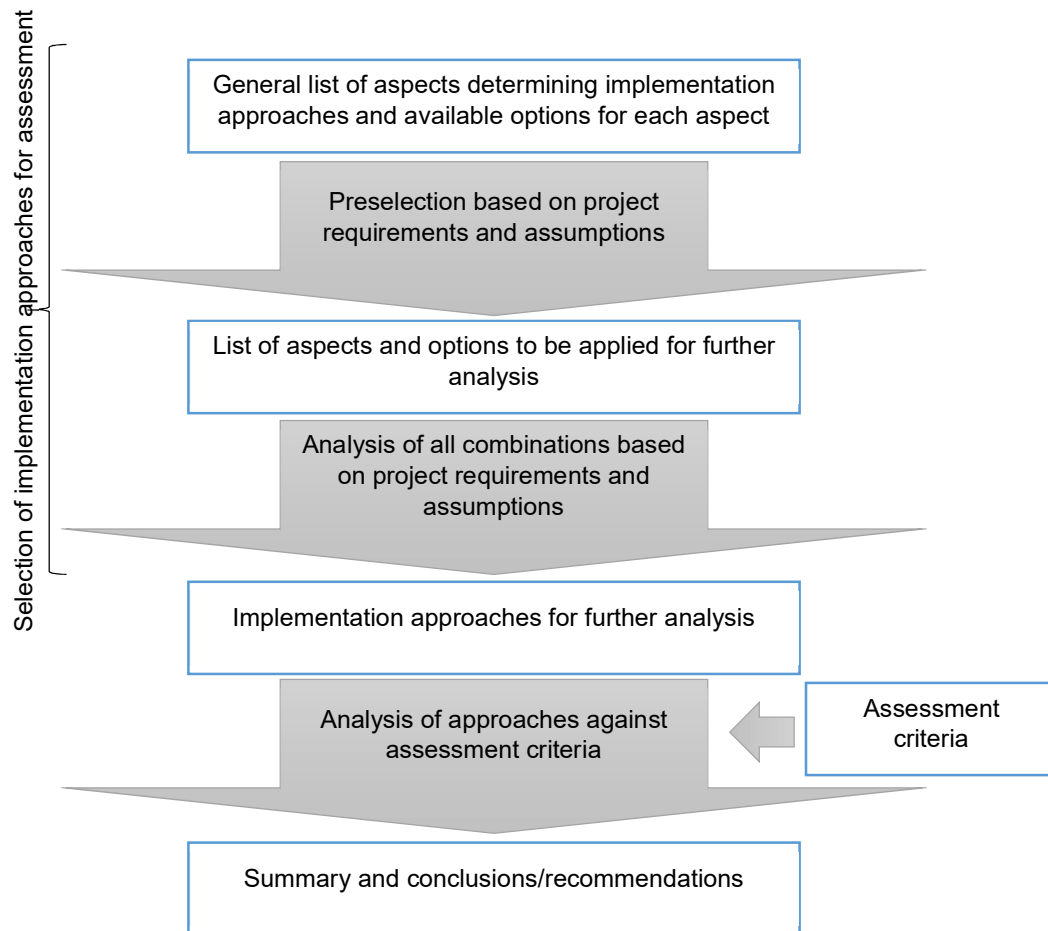

FIGURE 1. ASSESSMENT METHODOLOGY.

The process of selection of implementation approaches starts with identification of various aspects that are in general considered in similar projects as having impact on the architectural decisions. These are subsequently investigated against the assumptions and requirements of the ESEF project and removed if they do not apply in the given implementation context. The remaining aspects combined identify the potential implementation approaches.

Separately, a set of criteria is defined according to the assumptions and requirements, in order to be applied in assessment of identified approaches.

The result is a quantitative analysis allowing to limit the number of approaches to be taken into consideration.

These selected approaches are subsequently described as part of the qualitative assessment of the recommendation.

1.2 Assumptions and requirements

According to the Recital 26 of the Transparency Directive amending Directive 2013/50/EU[11]:
"A harmonised electronic format for reporting would be very beneficial for issuers, investors and competent authorities, since it would make reporting easier and facilitate accessibility, analysis and comparability of annual financial reports."

Based on that, the following are the base assumptions and requirements for the ESEF technical standard considered in this document:
A. Exchanged information shall be structured in order to enable its automated extraction and processing (e.g. transformation and loading for analytical purposes),
B. Definitions of data items shall be precise and accurate, enabling identification of their meaning and relations within the exchanged data,
C. Structured data shall cover information useful for analysis (i.e. it shall be comparable, stable in time and providing the level or granularity expected by the current and potential future users),
D. Ease of use by data producers and consumers.

Moreover, the following are the conclusions of the Feedback Statement to the Consultation Paper on the Regulatory Technical Standard on ESEF issued on 25 September 2015, which shall drive definition of criteria and selection of the approaches:
- issuers shall prepare annual financial reports [AFRs] in XHTML format which can be displayed in standard Internet browsers,
- where AFR contains consolidated financial statements drawn up in accordance with the International Financial Reporting Standards [IFRS], the issuers shall tag the information contained in these consolidated financial statements using concepts defined in the IFRS XBRL taxonomy in inline-XBRL format,
- ESMA, at least in a first step, does not intend, to require issuers to mark-up the individual financial statements, the management report and the other parts of the AFR also the third country issuers with securities listed on a regulated market in the EEA drawing up their financial statements according to GAAPs deemed equivalent to

---

[11] http://eur-lex.europa.eu/legal-content/EN/TXT/?uri=celex:32013L0050

IFRS should not be required to prepare their AFR in structured electronic format. However, Member States shall be able to permit or require to mark-up individual financial statements and management reports of the issuers in a structured electronic format, if a taxonomy for the respective reporting framework exists.

2 Aspects determining implementation approaches

As described in Annex A – XBRL/iXBRL are technical standards for metadata description and data exchange that may be flexibly applied in various scenarios.

This section of the document tries to identify the aspects that determine the manner of application of XBRL/iXBRL, analyses them in context of ESMA ESEF project requirements/assumptions and provides a list of approaches for further examination.

2.1 Identified aspects

The following aspects typically determine the approaches for implementation of iXBRL:

- type and scope of information requirements,
- underlying regulations,
- availability of existing taxonomies,
- taxonomy development or extension by the implementing regulator,
- taxonomy extension by reporting entities,
- level of tagging,
- tagging requirement from the taxonomy perspective and from the report perspective,
- types of reports,
- types of reporting entities,
- reporting frequency.

Type and scope of information requirements determines the first and major division to be applied in further analysis and definition of implementation approaches. It focuses on analysing the size and character of exchanged data. In case of ESEF these are financial statements that are typically split in:

- the primary financial statements [PFSs], typically including the face of balance sheet, income statement, cash flow statement, statement of retained earnings/changes in equity,
- the set of notes and disclosures [NaDs], containing all other information not included in the PFSs,
- other content (additional graphics such as photos, logotypes, etc.) used for increasing the attractiveness and readability of the report.

PFSs are usually represented in tabular format as a set of numeric facts which can be mapped relatively easy against the set of tags predefined in taxonomies. The set of items appearing in the PFSs is to a high extent shared and common between various companies. However, there may be significant differences by sectors (e.g. structure and elements of an income statement or a balance sheet of a bank or an insurance company).

NaDs contain descriptive data for qualitative disclosures but also information represented in tabular format, lists, etc. Their content is usually much larger than the PFSs and may differ significantly from entity to entity, regardless of the industry the entity operates in. Nevertheless, accounting regulations usually define, with various levels of granularity, the names and

400

expected content of notes and disclosures to be represented in a financial statement. Tagging of this information is however significantly more difficult due to size, variety of information and its representation.

Underlying regulations are basically the source documents or models describing the information requirements. In case of ESMA ESEF project these are:
- the International Financial Reporting Standards [IFRSs] which companies listed in the EU have to apply mandatorily since 2005 for the consolidated financial statements. In addition to that, in some Member States also the individual financial statements (in a few EU member states or filers from outside of EU) can or have to be prepared under IFRS.
- national accounting regulations, commonly referred to as Generally Accepted Accounting Principles [GAAPs] of any of the EU countries, which can or have to be used for reporting of individual financial statements by EU companies,
- other GAAP deemed equivalent to IFRSs that may be applied by companies from third countries listed in the EU.

Although national GAAPs of the EU member countries are harmonised through the Accounting Directive, there still are significant differences in terms of measurement and presentation of financial condition of companies.

Availability of existing taxonomies aspect is tightly coupled with the underlying regulations topic described above. There are XBRL taxonomies already created for various GAAPs that could be potentially reused by ESMA for the ESEF project as the base. These are for example the IFRS Taxonomy[12] and a few national GAAP taxonomies for some EU Member States (e.g. Denmark, Spain, Germany, UK, etc.) and non-EU countries (e.g. US, China, Japan, etc.). However, there is still a number of GAAPs that do not have their XBRL representation yet. Initiatives such as xEBR Working Group of the XBRL Europe[13] try to develop the core dictionary covering various European GAAPs but the works are still ongoing.

Taxonomy development or extension by the implementing regulator covers the scope and approach for centralized definition of taxonomy tags to be used by reporting entities to describe their data. This topic shall be analysed in context of availability of existing taxonomies explained above. In case of ESMA ESEF project, the options considered for this aspect include:
- no development or extension of an existing taxonomy by ESMA (meaning that ESMA will designate other existing taxonomy or taxonomies to be applied by reporting entities),
- development of a taxonomy to be applied by the reporting entities (the scope and architecture of which needs to be determined), by ESMA;
- extension by ESMA of any of the existing taxonomies.

In case of the latter, the work on the extension taxonomy depends on the architecture, scope and applicability of the base taxonomy to be extended and they may:

---

[12] See Annex B – IFRS Taxonomy.
[13] http://www.xbrleurope.org/working-groups/xebr-wg

- be purely technical, aiming at preparation of the base taxonomy for reporting in case it is not already designed in this manner by its authors (which is a common situation when taxonomies are meant to be extended by reporting entities and therefore do not contain tags for company specific data such as types of operating segments or financial assets and liabilities),
- involve business analysis of the base taxonomy and potentially reportable information in order to extend the number of predefined tags (e.g. include industry extensions and common practice concepts).

Taxonomy extension by reporting entities represents different approaches, in which the filers define their specific tags in case they are not able to find corresponding concepts in the taxonomies enabled to be used in reporting. With regard to this topic, the following options may be considered:

- no extension by the reporting entities, meaning that filers must apply only the tags from the original taxonomy,
- extension of the base taxonomy with the company specific concepts and definition of company specific relations from scratch (in this scenario, filers reuse the base taxonomy concepts definitions while the structures are flexibly modelled with no relation to the relationships provided in the base taxonomy),
- guided/controlled extension of the base taxonomy, where filers may define company specific concepts and relations but are obliged to follow certain rules (for example anchor the extension concepts in the base taxonomy relations).

Allowing filers to extend the taxonomy provides more tagging possibilities. These extension tags may be analysed by the regulator and, if similar items appear in multiple statements over time, they may be included in the base taxonomy in order to increase data comparability and lower the extension rate.

In case extensions are not allowed, regulators may use one of the expandable constructs available in XBRL (tuples, typed dimensions, etc.) to enable wider tagging coverage.

Level of tagging determines the coverage and granularity of tagged data in a report. This aspect may be approached in three ways:

- to require detailed tagging of each individual piece of information (every number, description, date, etc. must be tagged separately),
- to allow block tagging of entire sections of report as one piece (in addition to that, their individual components may be optionally tagged separately as in detailed tagging); granularity of block tagging may vary from the level of the entire note/disclosure to their pieces like tables or smaller sections with quantitative information,
- no tagging where parts of the report may be exempted from tagging requirements.

Tagging requirement can be analysed from the taxonomy perspective and from the report perspective. In case of the first, this aspect relates to the creation of subsets of tags for which there are different requirements for their application in the reports. In general, a taxonomy defines concepts to cover a variety of data that may be potentially reported. If a report contains a value for any of the taxonomy concepts, then this value must be tagged. But the fact that a concept exists in the taxonomy, does not mean that every report must have a value for it.

Moreover, if a report does not contain a value for a concept defined in a taxonomy then it is simply not applied without any explanation.

The number of concepts defined in the different taxonomies varies. In some cases, it may potentially be quite high (thousands or tens of thousands). According to the above explanation, all of them shall be assessed by filers with regards to the information included in their reports and applied if corresponding values are found. A regulator may however define a subset of tags and impose different requirements related to their application, for example identify concepts that are:

a. used for representation of components of a report that do not need to be tagged
b. mandatory and must be present in a report.

In case of point a) above, filers may be provided with a subset of tags that are requested be used in the first-time submission or by the smaller entities in order to delay application of the extensive full list of all taxonomy tags. This approach is referred to in this document as the Limited Tagging Requirement [LTR] and is essentially the same as the "no" option of the level of tagging aspect discussed above (i.e. parts of the report are exempted from tagging requirement).

Point b) above represents another implementation option called 'Mandatory Tagging Requirement' [MTR] where the subsets are used to impose stronger requirement of reporting in which tags from a list become mandatory and must always be provided with values in the reports.

For purpose of this document, the case where no LTR is defined by a regulator is referred to as the Full Tagging Requirement (FTR) and it represents the situation where filers are in general obliged to apply all base taxonomy concepts for which the corresponding data in their reports maps to concepts' definitions, but they do not need to explain if a tag existing in the taxonomy is not applied.

In order to address this topic of "explanation of omission" and lower the risk of data in the reports being not tagged, a regulator may impose a Comply or Explain [CoE] rule, according to which a filer must justify omission of any tag defined in the taxonomy. In case filers are allowed to extend, CoE helps to prevent situations where filers, instead of using the base taxonomy tags, create their own corresponding entity-specific extensions. Moreover, in this scenario, filers may be required to explain which extension tags were used instead of any of the tags available in the base taxonomy.

CoE is usually combined with MTR, in particular when the base taxonomy contains thousands of tags as otherwise explaining each omission of an element available in the base taxonomy may be burdensome for filers.

The list of tags, where upon omission the CoE rule would have to be applied, can be the same as the list defined for MTR, or a subset of it. Feedback from filers (explanations for non-compliance) may be subsequently analysed and tags commonly identified as missing, may be included in the base taxonomy provided by the regulator. The lists of tags for MTR and CoE may differ between industries, types of filers or reports.

The example presented on Figure 2 shall elucidate these above-mentioned options for tagging requirements.
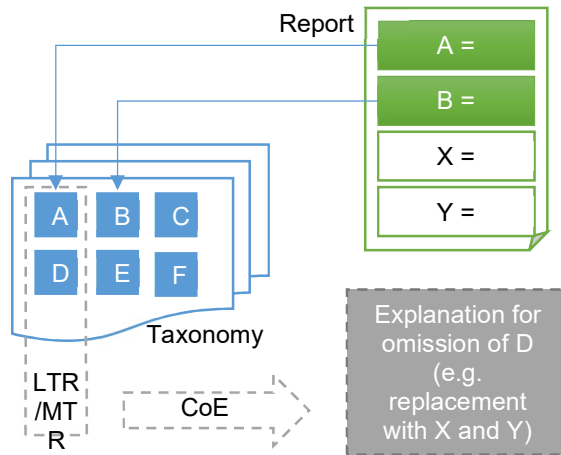

FIGURE 2. EXAMPLE FOR EXPLANATION OF TAGGING REQUIREMENT ASPECT.

The example taxonomy defines six tags: A, B, C, D, E and F. These tag must be applied if a report contains data corresponding to their definitions. In the example, the report contains values for tags A and B and these are tagged. It also contains information about X and Y for which there are no corresponding tags in the provided taxonomy. Taxonomy tags C, D, E and F have not be applied in the report with no justification on their omission.

Optionally (marked in grey colour) a regulator may impose mandatory tagging requirement. In the example it is limited to tags A and D. Depending on the definition the tagging requirement by the regulator:

- it may be limited (LTR) only to these two tags (meaning that reports may contain data for tags B, C, E and F but no tag would be applied) for first reports or a group of filers (which is similar to detailed level of tagging for A and D and no tagging for the other items), or
- tags A and D become mandatory (MTR) and every report must contain a value for these two tags.

In the latter case, a regulator may apply the CoE and allow filers to omit the mandatory tags, provided that they explain the reasons. CoE may also be applied to all items, but it is impractical in case the number of tags in the taxonomy is high. The format of the CoE is not standardised.

If a filer is allowed to extend the taxonomy, values for X and Y would be tagged. If they are related to any of the MTR tags, such information could be included in the explanation.

The tagging requirements may also be analysed from the report perspective. A regulator may impose that certain parts of the report must be tagged (individually or in blocks as explained in the level of tagging aspect). The decision where to apply mandatory tagging is usually related

to subsequent data usage where certain level of data availability is needed to perform analysis. For example, in order to provide investors with a minimum set of tagged data for automated processing in analytical tools, a regulator may require the PFSs and a few notes to be tagged in detail (meaning that every single fact in these sections of a report must be tagged individually) an in complete (as oppose to the "regular" tagging where filers are expected to use only the tags available in the taxonomy and hence part of the data may remain untagged). As every tagged value requires a corresponding concept in the taxonomy, this can be achieved if at least one of the following is fulfilled:

- the taxonomy provided by a regulator is very large and covers all potential concept (which may be impossible to define and impractical to use),
- the taxonomy provided by a regulator contains "expandable" constructs or technical elements with broad meaning allowing the filers to detail the definition and tag values,
- filers are allowed to extend the taxonomy provided by a regulator and define their company specific tags.

Types of reporting entities are different institutions that are obliged to submit their reports. In case of ESMA this population are listed companies subject to the Transparency Directive.

Types of reports are determined by the envisaged reporting scenarios. In case of projects like ESMA's ESEF they may be limited to the consolidation scope distinguishing the type of a financial statement into group and solo. Technically, this division may be approached by means of separate sets of tags, dedicated dimensions or entry points to the taxonomy.

Reporting frequency intervals includes yearly, half yearly and quarterly data.

2.2 Selection of aspects and options for aspects

The number of potential scenarios for implementation based on all possible combinations of options for aspects listed in the previous section is significant (it runs in thousands). Moreover, in a few cases, the options for various aspects described in the section above, are interconnected and should be considered jointly while in other cases they may be mutually exclusive. Therefore, this section provides the initial preselection of aspects and options for aspects to be used for further analysis. Each elimination of an aspect or its option is justified with a short description. The elimination of options is carried out based on the most efficient implementation scenarios, given ESMA ESEF project requirements and assumptions.

2.2.1 Scope of information requirements

In case of type and scope of information requirements, which as described in the previous section represents the major division, the analysis is performed separately for the PFSs and NaDs.

This means that, for example, some of the identified implementation approaches may assume different level of tagging to be applied for the PFSs and NaDs (i.e. the latter being requested to be tagged with lower granularity - as blocks, or even not at all) or that the taxonomy extension created by ESMA or provided by filers are constructed in a different way or requested only for the one or the other.

Other content of a report (e.g. photos, logotypes, etc.) is not planned to be tagged but it shall be technically possible to embed it the reporting format (see Annex A – XBRL/iXBRL).

2.2.2 Accounting regulation

Regarding accounting regulations, the analysis is performed only for the IFRSs which are obligatory for a large part of the reporting population (group reports of listed companies) and can be transformed in a structured format making use of the IFRS Foundation's IFRS Taxonomy (see Annex B – IFRS Taxonomy). National GAAPs were excluded from the analysis due to limited availability of XBRL representations (i.e. taxonomies) and if they exist, due to the diversity of architectural approaches for XBRL taxonomies.

2.2.3 Taxonomy development or extension by ESMA

For taxonomy works to be performed by ESMA, the analysed options result from the above decisions on the supported accounting regulations and include:
- no extension, or
- "technical" extension or
- "business" extension

of the IFRS Taxonomy.

"Technical" extension of the IFRS Taxonomy by ESMA is understood in this analysis as explained in details in Annex B – IFRS Taxonomy. It assumes attachment, where applicable, the breakdowns which according to the IFRSs could be used in various places (for example "Retrospective application and retrospective restatement", "Departure from requirement of IFRS", "Continuing and discontinued operations" or "Consolidated and separate financial statements"), completing the breakdowns (for example "Operating segments" which are not predefined in the IFRS Taxonomy) and adding new line items using the mentioned in the Annex B – IFRS Taxonomy "extensible" XBRL syntax constructs or "technical" concepts (i.e. providing mechanisms to tag information for which there is no exact corresponding concept defined in the IFRS taxonomy).

"Business" extension, in addition to the above, assumes inclusion of new concepts to the taxonomy, in particular covering in more detail different sectors or replacing "technical" concepts with concrete financial terms as explained in the Annex B – IFRS Taxonomy.

The option of ESMA developing a pan-European alignment taxonomy for all national GAAPs (either alone or in cooperation with institutions already involved in such attempts such as XBRL Europe) has not been taken account in this analysis, due to the significant number of factors and unknowns in case of such scenario (architectural decisions, relations to other existing taxonomies, organisation of works, approach for maintenance and updates, etc.).

2.2.4 Taxonomy extension by filers

From the reporting entity standpoint, the analysis and assessment is performed for all options discussed for this aspect in the previous section, i.e. disallowing extensions, allowing controlled (guided) and uncontrolled (any) extensions. There is however an important dependency between the selection of an option for this aspect and the scope of taxonomy works assumed to be performed by ESMA. On the other hand, decision on the approach towards the entity specific extensions impacts the next two analysed topics, i.e.: level of tagging (allowing some data not to be tagged or requiring a higher or lower level of granularity of tagging) and tagging requirement (LTR/FTR with or without MTR and CoE)..

2.2.5 Level of tagging

As explained in section 2.2.1, level of tagging is analysed separately for the PFSs and NaDs where the following options could apply: detailed, block and no tagging.

2.2.6 Tagging requirements

Regarding the tagging requirements aspect, ESMA probably would not be able to prepare a list of mandatory tags for MTR. This is due to the nature of the IFRSs, which in general expect filers to report any material information and give the preparers considerable leeway when it comes to the presentation of the information.

Similarly, it also seems not feasible for ESMA to impose the Comply or Explain rule, introduction of which could be perceived by the filers as additional reporting requirement out of scope of the data requirements for a financial statement set by the IFRSs.

Application of the LTR to stage the implementation by expecting only a subset of tags to be used in the first submissions is addressed by option "no" for the level of tagging which currently applies separately to PFSs and NaDs.

The topic of Limited Tagging Requirement (i.e. identification of only a subset of tags to be applied in the first submissions) is already covered in the analysis as the option "no" for the level of tagging (where some sections of a report may remain untagged and hence it limits the number of applicable tags).

Regarding the tagging requirement aspect from the report perspective, ESMA may consider to require complete (and detailed) tagging of PFSs and selected notes in order to provide a certain level of tagged data to be subsequently used for analysis. This requires at least technical extension of the IFRS Taxonomy or allowing filers to create extensions. A possible alternative approach to be considered in case no IFRS Taxonomy extensions are provided, is to not require complete tagging of any sections of a report which as described in section 2.1 discussing the tagging requirement from the report perspective is referred to in this document as the regular tagging.

2.2.7 Other aspects

For other aspects, the options are already determined by the decisions taken above.

The options in the aspect of consolidation scope follows the approach taken by the IFRS taxonomy where the distinction between data on group and individual level is made using defined specifically for this purpose dimension members (see Annex B – IFRS Taxonomy).

Nevertheless, in order to limit the number of final scenarios for examination and taking into account that the Europe-wide application of IFRSs is mandatory only for the consolidated financial statements, the analysis was limited to consolidated financial statements only.

Similar reasoning applies to the reporting entity types where only listed companies are currently requested to file their IFRS statements in the ESEF. Furthermore, the Transparency Directive only requires annual financial reports to be prepared in the ESEF. There is currently no requirement to prepare half-yearly or quarterly reports in the ESEF.

2.3 Selected aspects

The preselected aspects and available options for definition of implementation approaches are summarised in Figure 3.

Accounting	Consolidation	Reporting entities	Reporting
IFRSs	Group reports	Listed companies	Yearly

IFRS Taxonomy extension by ESMA	• No extension provided • Technical extension • Business extension
Taxonomy extension by reporting entities	• No extensions allowed • Controlled/Guided • Uncontrolled/Any
Tagging requirement from report perspective	• Complete tagging • Regular tagging
Level of tagging	• Detailed tagging • Block tagging • No tagging

FIGURE 3. ASPECTS AND THEIR OPTIONS FOR DETERMINING IMPLEMENTATION APPROACHES.

As explained above, the options identified on Figure 3 are planned to be assessed separately with regards to the PFSs and the NaDs as the policy of allowing extensions or requiring minimum tagging may differ for various sections of a report and be graded/phased.

3 Implementation approaches

As a result of the initial preselection of aspects (or specific options for aspects) explained above, the number of implementation approaches was limited to the combinations presented in Table 2.

TABLE 2. SELECTED APPROACHES.

IFRS taxonomy extension by ESMA	Taxonomy extension by reporting entities	Tagging requirement from report perspective		Reporting scope

Block tagging assumes additional optional detailed tagging of all or some information in the block. Complete and regular tagging requirement does not apply where the level of tagging is "no" hence the cells are merged.

Table 2 presents in rows the options for the IFRS Taxonomy extension by ESMA, the options for extensions of the base taxonomy by reporting entities and the options related to the tagging requirement. Columns identify the three options relating to the available levels of tagging separately for PFSs and NaDs.

3.1 Preselection of approaches

The approaches presented in Table 2 as cells with dark background were already eliminated in the first step of the analysis. This reduction was based on the assumptions and requirements for the ESEF project described in the following section.

3.1.1 Assumptions for the preselection of approaches for PFSs

Firstly, in order to achieve the minimum level of structured data in a report, at least the PFSs shall be tagged. Additionally, only detailed tagging of PFSs is considered for further analysis (this eliminates columns B and C) as block tagging would not provide the expected level of granularity and coverage for structured data. .

Moreover, in case ESMA extends the IFRS taxonomy at least technically or allows filers to extend (in controlled or uncontrolled manner), the complete tagging of PFSs should be expected (this eliminates A3, A5, A7, A9, A11, A13, A15 and A17). Otherwise only regular tagging is possible (results in eliminating A2).

Furthermore, the aim of a "technical" extension of the IFRS Taxonomy by ESMA is to provide filers with a taxonomy that would not need to be further extended by filers in order to be used (especially when completed detailed tagging would be required). This would eliminate rows 9 to 12. Nevertheless, the scenario that controlled extensions by filers could in addition to the technical extensions by ESMA be simultaneously applied (rows 9 and 10) was not removed from analysis. Giving filers the option to provide more detailed information by extending the base taxonomy in a controlled way, might provide users with even more meaningful information than could be conveyed with the technical extensions by ESMA only.

3.1.2 Preselection of approaches for NaDs

For NaDs, the mandatory detailed tagging option is considered reasonable only in case the reporting company is allowed to extend the base taxonomy in uncontrolled manner as even if ESMA provides extensive extensions to the IFRSs, the limited number of predefined tags or extensible constructs applied may still be insufficient to cope with this requirement (eliminates D1-D4, D7-D9 and D13-D16)[14]. Nevertheless, as explained above, filers may optionally tag in detail certain information in notes in regular manner (i.e. based on tags or expandable constructs available in the base taxonomy), especially in cases D9, D10, D15 and D16. Detailed tagging may be also applied partially on mandatory basis, only to limited number of selected notes (with high information value for investors)[15].

It would only be reasonable to require complete tagging of NaDs if detailed tagging of the NaDs would be required (this eliminates E2, E4, E6, E8, E10, E12, E14, E16 and E18).

No tagging of notes is assumed only when ESMA does not provide extensions to the IFRS Taxonomy or filers are not allowed to extend at all (this eliminates all in column F apart from F1/F2).

3.2 Selection of approaches for PFSs and NaDs

Further selection of approaches to be used in assessment was conducted for reasonable combinations of options applicable separately for PFSs and NaDs based on the assumptions presented in Table 3.

---

[14] Theoretically, D15 and D16 may be possible but difficult to achieve in reality due to flexibility and complexity of notes.
[15] This shall be made on the basis "if a note is reported, then it must be tagged in details".

#	Assumption	Reasoning
R1	If ESMA does not extend the PFSs then it does not extend NaDs as well	It is more reasonable (due to the effort required and the benefits it brings) to extend the PFSs before extending the NaDs.
R2	If ESMA extends PFSs technically, then it extends the NaDs technically too (and only technically) and requires at least block tagging of NaDs	If ESMA decides to make the effort and extend technically the PFSs then the additional effort to extend technically the NaDs is relatively low. Moreover, if ESMA extends the NaDs then shall require at least their block tagging.
R3	If ESMA extends the PFSs from the business perspective then it extends the NaDs too (at least technically) and requires at least block tagging of NaDs	See reasoning for R2.
R4	If filers are not allowed to extend the PFSs then they do not extend the notes either	See reasoning for R1.
R5	If filers extend the PFSs in controlled manner than the uncontrolled extension of NaDs does not make sense	From a technical standpoint, partial uncontrolled extension may difficult to impose and regulate.
R6	If filers extend the PFSs in uncontrolled manner then controlled and no extension of NaDs does not make sense	See reasoning for R5.

TABLE 4. SELECTED APPROACHES.

As presented in Table 4, there are usually several options for tagging of NaDs for each approach for tagging of PFSs, resulting in total in 20 approaches. These approaches are evaluated in the next section against the assessment criteria.

4 Assessment

In order to identify the approach or approaches to be implemented in ESEF project, a set of criteria was identified. These are explained in more detail in the following section.

4.1 Criteria and weights

The following criteria were identified as important. They were used to evaluate the approaches that were preselected in section 3.2 of this report in order to identify the most beneficial approaches:

1. **Availability of data for automated processing**: This criterion is related to the number of tags applied in a report and their granularity (availability of data for automated processing is higher if more individual facts, i.e. numbers, textual descriptions, etc. are tagged in each report).

2. **Data comparability and analytical possibilities**: This criterion relates to the application of standard tags (i.e. defined in the IFRS Taxonomy or in ESMA extension) across reports. Filers' extension concepts enable comparison of filers' reports in time, but may require additional effort to compare the data between different entities' reports.

3. **Effort from filers side**: Defined in terms of man-days and expenses required for preparation of a report (including licenses, hardware and all other related services such as quality assurance or audit/review by external party) divided by:
   a. one-off (for first filings) and
   b. ongoing (for subsequent filings).

4. **ESMA effort:** In terms of cost, resources, time constraints, etc. related to
   a. definition and
   b. maintenance

   of the taxonomy (ESMA extension of the IFRS Taxonomy) and additional filing rules (related to filers' extensions and tagging).

5. **Effort required to validate the structured data:** Related to preparation of infrastructure for checking the reported data for proper representation on XBRL format and correctness/completeness of tagging.

6. **Definition and execution of data quality checks:** Relates to possibilities of ensuring the correctness of tagging by applying checks by means of XBRL Formula specification or other external solutions.

7. **Risk of data not being tagged or being tagged wrongly** relates to probability that filers would intentionally or unintentionally misuse the concepts defined in the base taxonomy or don't tag (potentially significant) information in their report.

8. **Compatibility with common/international practices** identifies the level of alignment with existing implementations of XBRL in order to determine if for a given option there is market experience, toolkits or other data available tagged in a similar manner.

The first two criteria described above are closely related to the requirements of the Transparency Directive to facilitate accessibility, analysis and comparability of date for the benefit of data users (investors, NCAs, other market participants).

Criterion number three also represents the Transparency Directive requirement of making the reporting easier for the issuers.

Criterion number four aims on measuring the effort of ESMA in order to prepare the definition of concepts in the structured format. It is important to take this into account to limit the risk of selecting an approach which may not be feasible to implement given the time and budget constraints.

Criteria five, six and seven measure the effort and opportunities to ensure quality of reported data.

The aim of the last criterion number eight is to evaluate the options in context of other projects and their experiences.

Each criterion was assigned a weight in scale from 0 to 1 as presented in Table 5.

	Criteria		Weight	Summary weight
1	Availability of data for automated processing		1.00	2.00
2	Data comparability and analytical possibilities		1.00	
3a	Effort on filers side	one-off	0.50	1.00
3b		ongoing	0.50	
4a	ESMA effort	to define	0.50	0.75
4b		to maintain	0.25	
5	Effort required to validate for correctness and completeness		0.25	
6	Definition and execution of data quality checks		0.25	0.75
7	Risk of untagged but possible to tag or wrongly tagged data		0.25	
8	Common practice compatibility		0.25	0.25

TABLE 5. CRITERIA AND WEIGHTS.

Criteria which result directly from the Transparency Directive received the highest weights, with stress on the main objective of the Directive which is to provide better access to the data and increase analytical possibilities (the summary weight for criteria one and two is 2). Second in the rank is the effort on filers' side also stemming from the Transparency Directive. Lower weights were assigned to ESMA effort (0.75 to address the issue of feasibility of implementation), validation and data quality (0.75) and comparability with other implementation (0.25).

These assessment criteria may be applied in general to the identified aspects and their options (see the next section), combinations of aspects (see section 4.3) and subsequently to implementation approaches individually (see section 4.4.

4.2 General assessment against the aspects and their options

The assessment was measured using a scale from -3 to 3 with minimum steps of 0.5. For criteria one to five -3 represents the highest negative impact and 3 the highest positive impact. Scale for criterion six measures possibility and for criterion seven the risk where -3 is the highest decrease in possibility or increase of risk whereas 3 represents the highest increase in possibility/decrease of risk. In case of criterion eight, 3 identifies the highest alignment with common practices while -3 a bad practice. In all cases 0 shall be understood as no impact or not applicable.

The scores for assessment of criteria against the IFRS taxonomy extension by ESMA, taxonomy extension by filers and level of tagging aspects are presented together with reasoning in Table 6, Table 7 and Table 8 respectively.

4.2.1 Assessment of criteria against the IFRS taxonomy extension by ESMA aspect

Criteria	No	Technical	Business	Reasoning for applied scores
1	1	2,5	3	Without being extended the IFRS taxonomy offers around a few thousand tags that may be applied in a report. Technical extension would make it possible to tag more data. Further business extension (sectoral and commonly used concepts missing in the IFRS taxonomy) provides additional tags that can be automatically processed. This reduces the effort of users required to prepare data for analysis by converting it to a single format that may be processed by computer applications.
2	1	2,5	3	As explained above, the number of standard tags defined in a taxonomy increases with technical and even more with business extension of the IFRS taxonomy.
3a	-1	-1,5	-3	In case of business extension filers have to investigate the highest number of taxonomy concepts to tag their reports which is most costly in terms of effort. Effort is lower in case of technical extension and lowest when only standard IFRS taxonomy tags are to be used for tagging.
3b	-0,5	-1	-2,5	No or technical extension limits the ongoing effort to tracking changes in the IFRS taxonomy. ESMA business extension may be providing new concepts in each version which requires significantly higher effort on filers' side.
4a	0	-1	-3	It is definitely more challenging and involving highest effort for ESMA to define business extension (it includes detailed analysis of the IFRS taxonomy content and adjusting it to cover common structures and items used by the companies but reflected in the original IFRS taxonomy). Creation of the technical extension is relatively easy (it shall be sufficient to assign the "to application" breakdowns to respective statements and provide artefacts to enable reporting of breakdowns that are company specific and need to be adjusted).
4b	0	-0,5	-2,5	Maintaining the technical extension requires merely applying the same constructs every year in the updated IFRS taxonomy. Moreover, in this approach the repeatable process to adjust the IFRS taxonomy each

416

Criteria	No	Technical	Business	Reasoning for applied scores
				year with the same set of steps and artefacts may be potentially automated. When applying the business extension, a set of extension concepts and relationships must be analysed in context of the IFRS taxonomy updates each year. This involves, amongst other, investigating deprecated items, replacing extension items with newly added IFRS items, etc.
5	-1,5	-1,5	-1,5	In either case there is a negative impact on OAMs requiring them to adapt their solutions to receiving and publishing the data in a structured format.
6	0,5	3	1,5	Possibility of defining business checks is highest in case of technical extension where the structure of tagged data is predefined in the taxonomy. It is lower in case of business extension and lowest in case of no extension (due to limited number of concepts in the taxonomy).
7	0	-1	-2	The highest risk of existing data being untagged or tagged wrongly is when ESMA creates the business extension of the IFRS taxonomy (due to the number of tags, complexity of structures, etc. where filers may get lost). At the same time the risk is slightly lowered by availability of tags that exactly match the data in reports (as otherwise, filers would use closest match which may have slightly different meaning). The risk is also present in case of a technical extension where filers may use the technical tags despite existence of a business tag.
8	-1,5	2	3	It is uncommon that IFRS taxonomy is used not extended. Business extension is most common approach of application.

TABLE 6. ASSESSMENT OF CRITERIA AGAINST THE IFRS TAXONOMY EXTENSION BY ESMA ASPECT.

4.2.2 Assessment of criteria against the taxonomy extension by filers aspect

Criteria	No	Controlled	Any	Reasoning for applied scores
1	0	3	3	When filers are not allowed to extend, they can only use the limited number of tags from the taxonomy provided by a regulator. Extension (controlled or any) provides the possibility for tagging any section of a report and hence more structure data for automated processing.
2	0	3	1,5	Controlled extension provides highest possibility to reconcile to standard concepts and compare data. Any extension enables it to the lower extent, nevertheless it provides an option to match tagged data between reports based on label text.
3a	0	-3	-1,5	Controlled extensions require filers to deeply investigate the structures and content of the base taxonomy in order to anchor their specific concepts which results in highest effort. This is less costly in case of uncontrolled extensions. No impact in this regard is assumed when no extensions are requested.

Criteria	No	Controlled	Any	Reasoning for applied scores
3b	0	-2	-1	After first filing is produced, lower effort is assumed to be required to update the extension for each filing. Nevertheless, the effort is expected to be higher if controlled extensions are expected.
4a	0	-2	-1	Preparation of a filing manual and tagging rules is more challenging and involves higher effort in case of controlled extension when rules for defining extensions need to be established. This is less difficult in case of uncontrolled extensions.
4b	0	-1	-0,5	Updates to the filing rules shall be relatively small.
5	0	-3	-2	In case OAMs check correctness of extension, it is most challenging in case it is controlled and guided by the filing rules.
6	1	3	-2	Controlled extension provides high possibility of defining business checks as filers need to fit in structures for which the rules can be predefined. Similarly in case of no extension (provided that ESMA prepares at least technical extension). Uncontrolled extension hinders possibility of defining such checks.
7	0	3	-3	Controlled extensions require from filers to anchor their specific tags in existing structures which may help in preventing of duplicating existing tags. The risk of such behaviour appears in case of uncontrolled extensions filers.
8	1	2	2	In general all options are applied in various implementations but any or controlled extensions are more often used.

TABLE 7. ASSESSMENT OF CRITERIA AGAINST THE TAXONOMY EXTENSION BY FILERS ASPECT.

4.2.3 Assessment of criteria against the level of tagging aspect

Criteria	Detailed, complete	Detailed, regular	Block	No	Reasoning for applied scores
1	3	1,5	0,5	0	Complete tagging results in the highest number of tags in a report. Block tagging only identifies that a section is present in a report which is less helping in automated processing.
2	3	2	0,5	0	Regular tagging offers higher analytical possibilities than block tagging where users are able to see that the same information is included in different reports but need to read the note and extract comparable data from it. In case of complete tagging, additional comparison is possible based on text matching of labels of tags.
3a	-3	-2	-0,5	0	Complete detailed tagging requires highest effort from filers (each position in the financial statement must be classified according to the base taxonomy concepts or a new concept and structure must be created or anchored in the base taxonomy based on the approach to the taxonomy extension by filers), followed by regular detailed tagging and block tagging.

Criteria	Detailed, complete	Detailed, regular	Block	No	Reasoning for applied scores
3b	-1,5	-1	0	0	As above, however the impact is lower as ongoing effort is in general lower than one-off.
4a	-3	-2	-1	0	Definition of detailed tags is most challenging (equally for complete and regular tagging as this distinction does not apply in this case of ESMA level extension).
4b	-1,5	-1	-0,5	0	As above, however the impact is lower as ongoing effort is in general lower than one-off.
5	-3	-2	-0,5	0	In case OAMs check correctness of tagging, it is most challenging in case it is detailed and complete.
6	3	-2	1	0	Complete tagging positively impacts the possibility of defining business checks. The situation is opposite in case of regular tagging where some data may remain untagged. Block tagging may enable introduction of some existence checks.
7	-1	-2	0	0	Complete detailed tagging provides the highest probability that data is tagged wrongly but at the same time it reduces the risk of important data being untagged (which is not the case in regular tagging).
8	3	1,5	2	0	Complete detailed tagging and block tagging are most commonly applied. No tagging is not evaluated and ranked 0.

TABLE 9. SCORES FOR ASPECTS.

As presented in Table 9, the highest scores in general assessment are assigned to technical extension of the IFRS taxonomy by ESMA, controlled extension by filers and detailed and completed tagging.

4.3 Assessment against combination of aspects

In general, the scores for combinations of aspects are the sum of scores of individual aspects. However, in case of certain combinations, the numbers may not represent the actual impact. This is the situation of block tagging where the positive or negative impact resulting from ESMA extension of the IFRS taxonomy or filers' extensions is lower than in case of detailed tagging. Therefore, in such case the sum of scores for these two criteria was divided by two and added to the score of the block tagging aspect. The summary of scores is identified in Table 10.

TABLE 11. RANKED APPROACHES.

According to the quantitative results presented in Table 11, the highest score is assigned to an approach where ESMA provides a technical extension to the IFRS Taxonomy, filers are allowed to extend the taxonomy in controlled manner, PFSs are tagged in detail and in complete using "technical" constructs or controlled extension concepts while NaDs are tagged in blocks (in general) and optionally in detail on regular basis (using "technical" constructs or controlled extension concepts).

A similar scenario, in which filers are not expected to extend the NaDs, received the second highest score.

The approach with the third highest score is an approach in which ESMA provides business extension to the IFRS Taxonomy, filers are allowed to extend the PFSs (tagged in detail and

in complete) in a controlled manner, while NaDs are tagged in blocks (in general) and optionally in detail on regular basis.

The highest score (8th in the rank) in case ESMA decides not to extend the IFRS Taxonomy was assigned to approach 5.

5 Qualitative assessment of selected approaches and recommendation

As described in the previous section, the highest score according to the rank was assigned to Approach 11, followed by Approach 10 and 15.

The first two approaches represent a situation where ESMA extends the IFRS Taxonomy technically, which is reasonable given that having no extension of the IFRS Taxonomy might impair the filers' ability to tag all information in the report, while the development of a properly defined business extension is very demanding. Such a business extension may be difficult to be implemented given the time and budgetary constraints. In both cases filers are allowed to extend the taxonomy in a controlled manner instead of or in addition to using the regular and technical tags available in the taxonomy provided by ESMA. Nevertheless, extension of notes may be too demanding for filers especially in case of the first submissions when they are not yet familiar with the technology and tools. Therefore, it may be decided to phase the implementation by applying an approach with lower rank but having less impact on the filers and extend the scope and granularity of tagging over time. This is in line with the conclusions of the Feedback Statement to the Consultation Paper on the Regulatory Technical Standard on ESEF:

"To facilitate the implementation of structured electronic reporting, the draft RTS will foresee a two-year implementation phase during which the marking-up would only be required for the primary financial statements, however voluntary marking-up of the notes to the consolidated financial statements shall be allowed; after these two years the entire consolidated financial statements drawn up in accordance with IFRS will have to be marked-up."

It is also recommended that with time ESMA would require detailed and complete tagging of at least some important and commonly disclosed notes (such as for example Operating segments) that are necessary to understand the figures from the PFSs. With market getting more experienced in producing and consuming the data, detailed tagging of the ESMA business extensions will cause less challenges and provide the most benefits.

Although ranked lower than the technical extension, it may be also considered by ESMA to provide a business extension to the IFRS Taxonomy in the future (preferably in collaboration with the IFRS Foundation, so that the extension concepts can be used also in other implementation). In the longer term, when filers feel more comfortable with the technology, they may be more confident in using the provided taxonomy and tag more facts in detail and with higher granularity when these business extension concepts are available. Moreover, a technical and controlled extension approach applied in the first step might provide ESMA with information about what concepts are most commonly not found among the set of predefined tags and can be included in subsequent versions as business extension.

Annex A – XBRL/iXBRL

XBRL (eXtensible Business Reporting Language) is a technical standard for description of metadata and exchange of data. It enables defining information requirements in so-called taxonomies and further exchange of data (referring to definitions from taxonomies) in reports called instance documents.

The underlying technology is XML (eXtensible Mark-up Language) and derived specifications, in particular XLink which enables replacing nested structures commonly applied in classic XML schemas and instances with more flexible linking mechanism which in addition enables conveying various semantics.

Application of XBRL is very wide and its scope is not explicitly defined hence it can be used for remittance of various types of data. Moreover, taxonomy authors as well are creators of instance documents are equipped with a large number of customization options defined as part of the extensibility of the standard.

There are however a few fundamental constructs of XBRL applied in any reporting scenario appearing in both, the XBRL taxonomy and the XBRL instance documents.

In general, a XBRL taxonomy contains definitions of concepts that describe the exchanged data. Definition of a concept must at least contain its unique identifier (name), determine the expected type/format of reported value and provide the time context for which the value of a concept is expressed or measured (either at a point of time or in a duration of time). For documentation purposes, as well as to bring forward more semantics, concepts may be associated with human readable labels, reference to source materials (e.g. legal acts or standards) or be linked with one another in various types of relations.

XBRL instance document contain facts. Fact carries a value for a concept defined in a taxonomy. It refers to a context identifying an entity and period for which it is reported. Numeric facts refer also to a unit of measure and contain information on precision of value (data accuracy).

XBRL instance document may contain many facts for a single taxonomy concept (for example values for different periods or in different units such as currencies, etc.). Also not all taxonomy concepts need to be represented by facts in an instance document (reporting entities may not conduct all of the business activities that are addressed by taxonomies).

Implementations of XBRL may also include the dimensions add-on. Is such a case an XBRL taxonomy apart from concepts (that are later represented by facts in instance documents as described above) may also define artefacts serving as properties detailing or further describing the concepts. These take form of dimensions which may be one of the two kinds: explicit and typed. Explicit dimensions have their values (so called domain members) defined in the taxonomy while typed dimensions are restricted by expected format of allowed values. Taxonomy may clearly define which concepts are associated with dimensions and their values using hypercubes. In XBRL instance documents, dimensional properties (i.e. dimensions and

their values, that are either domain members or following the defined format) describing a fact are included in the definition of a context to which it refers.

iXBRL provides a mechanism for embedding XBRL tags in XHTML documents. This allows the XBRL benefits of tagged data to be combined with a human-readable presentation of a report, which is under the control of the preparer.

iXBRL enables decoupling of taxonomy metadata definition from data presentation in reports. This allows avoiding problems of XBRL implementations where taxonomy linkbases (other than Table Linkbase) which are meant to document the metadata are misused for data presentation. It is also more reasonable to combine iXBRL with guided/controlled extensions requiring to anchor company specific concepts in predefined structures that enables tracking relations of extension concepts to the tags defined in the base taxonomy.

XML, XHTML, XBRL and Inline XBRL are freely licensed and open standards developed and maintained by the non-profit organisations (World Wide Web Consortium [W3C] and XBRL International Incorporated [XII]).

X in XBRL stands for extensibility. This means extensibility of syntax to cover new semantics (e.g. types of relationships between concepts, other than those defined in the XBRL specification) and extensibility of taxonomies by other taxonomies. In case of the later, it is common that a taxonomy defined for certain information requirements is further adjusted for specific needs of a particular use. For example, the IFRS Taxonomy defined by the IFRS Foundation (see Annex B – IFRS Taxonomy) may be extended by a reporting entity with concepts that are company specific (such as operating segments or areas) or represent particularities of a sector (e.g. oil and mining industry, financial institutions, insurers, etc.). This extension may be applied in so called controlled and uncontrolled manner. The first assumes anchoring of specific concepts in the structures provided by the base taxonomy while the latter reuses the base taxonomy concepts only (while structures are created from scratch). An example of this difference is presented on Figure 4.
FIGURE 4. CONTROLLED AND UNCONTROLLED EXTENSION

The base taxonomy (in blue) defines concepts A, B, C, D, E and F and provides information about relationships between them, i.e. that A is composed of B, C and D while D is a parent of E and F. This could represent for example the structure of the balance sheet (where "Assets" can be broken down in "Property, plant and equipment", "Receivables", "Cash", etc.). As described above, in case of uncontrolled extension, reporting entity creates the structure from scratch using the base taxonomy concepts and extension concepts (if apply). In the example, the filer (in orange) defines three new concepts (X, Y and Z) and creates the structure to reflect their report which in this case is C, E, F, X, Y and Z as subcomponents of A. When defining the controlled extension, filer reuses the structure of the base taxonomy and anchors the extension elements. In this example, elements X and Y are categories of B (which may remain unreported, similarly to D), relationship from A to C is removed while relationship from A to Z is added (which provides a hint that these two concepts may be somehow related). As a result, it shall be in general possible to reconcile the extension concepts to the base taxonomy concepts in case of the controlled extensions, which is more complicated when extension is uncontrolled.

Annex B – IFRS Taxonomy

The IFRS Taxonomy is created by the IFRS Foundation. It is released at minimum each year as a new version and is updated to reflect the current set of standards published in the IFRS Bound Volume[16] with potentially a few interim versions published during the year.

It consists[17] of four files defining financial concepts for:
- the full IFRS application,
- application of the IFRSs by Small and Medium Enterprises [SMEs],
- the Management Commentary [MC] and
- deprecated (i.e. no longer applicable in the most current version) elements.

Each of these components provides a number of relationships for labels, references, presentation purposes and dimensional breakdowns, split by standard/statement (in folders and files structure as well as by means of extended link roles [ELRs]).

Taxonomy can be accessed for preview via entry point files. There is an entry point for each of the components as well as the combined ones.

Although the IFRS Taxonomy Regulators Guide[18] describes the possibility of applying the IFRS taxonomy as is, i.e. without any extension/customisation, such approach results in narrow tagging possibilities (due to, amongst other, limited number of tags in the IFRS Taxonomy) and therefore is in general discouraged. Moreover, neither the relationships nor the entry points of the IFRS Taxonomy are designed with the aim to be used in the actual reporting process. Instead, they serve merely the documentation purposes.

Filers shall therefore extend or define their own relations and potentially also create a set of extension concepts in order to resemble the content and structure of their financial statements. At minimum, such extension shall include:
- completion of breakdowns that are intentionally left open due to their industry/company specific nature (e.g. operating segments, classes of ordinary shares, typed of financial liabilities, counterparties, …), and
- attachment of, where applicable, breakdowns which theoretically could be used in various places if needed (e.g. solo/consolidated, continued/discontinued operations, retrospective application/restatement).

Regarding the first point, the author of an extension taxonomy may apply "expandable" constructs available in XBRL syntax (such as typed dimensions) or define "technical" concepts (e.g. "Subelement 1 Name", "Subelement 1 Value", "Subelement 2 Name", "Subelement 2 Value") to be used by filers to tag data and provide description of a tag as well (which normally

would be part of the taxonomy rather than a filing). An example of such technical extension is presented on Figure 5.
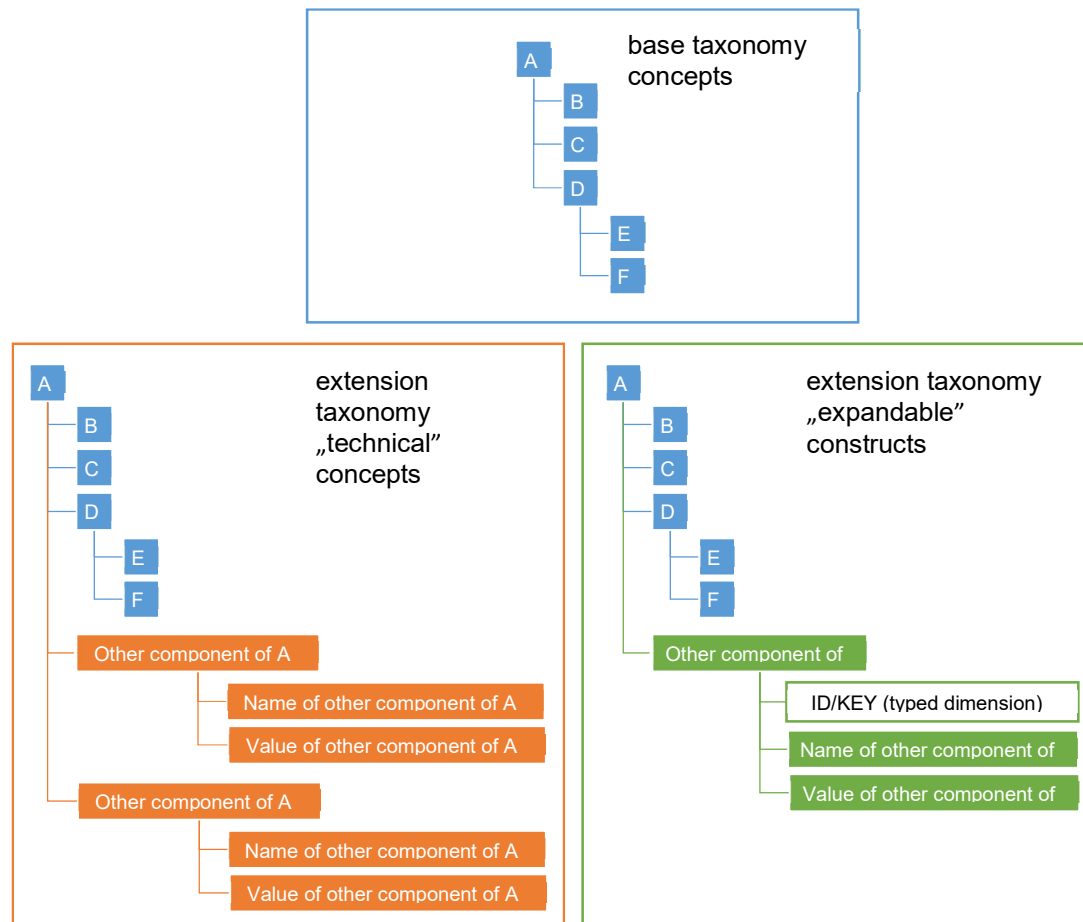

FIGURE 5. EXAMPLE OF TECHNICAL EXTENSION.

Base taxonomy presented in blue colour on Figure 5 defines six concepts A, B, C, D, E and F. For simplicity of this example, these are identified by letters, but in a real taxonomy each concept is identified by a unique and comprehensive label representing its business meaning (e.g. "Assets", "Liabilities", etc.). Moreover, the concepts are arranged in relationships for further documentation of their semantics. In the discussed example, concepts B, C and D are subcategories of A while concepts E and F are subelements of D. Such concepts for which there is a clear and precise definition provided in the taxonomy are called business concepts. IFRS Taxonomy contains a number of such concepts representing financial terms defined in the text of the IFRSs. These should be further extended by regulators or filers with sectoral or company specific business concepts respectively, especially when tagging is supposed to cover each and every individual data in a report. In order to avoid company specific extensions but enable filers to tag their statements completely, taxonomy extension provided by a regulator may define "technical" concepts and apply "expandable" constructs.

The orange rectangle on the bottom-left hand side corner of Figure 5 exemplifies the use of "technical" concepts to enable tagging of facts for which there is no matching business tag in the taxonomy. In this case, taxonomy authors define a set of "other component" tags, consisting of "name" and "value" where filers tag the title ("name") and the number ("value"). It is up to the taxonomy authors to decide how many "other components" provide but in general the number should be sufficient to cover the longest possible list that may be applied by a filer (e.g. if the most extensive balance sheet is expected to contain 100 lines then this number of "other components" shall be defined to enable filers to tag such statements completely in the unlikely case when they don't find any matching business concept in the base taxonomy. An alternative to defining multiple "other components" is to apply "expandable" constructs as exemplified in the green rectangle on the bottom-right hand side corner of Figure 5. In this case, filers provide an identifier for each name and value which enables tagging as many positions as necessary. The "technical" concepts and "expandable" constructs may be applied for any of taxonomy business concepts to enable detailing their representation in a report. In the provided example, these constructs are defined only for concept A. As a result, if a report of a filer contains a fact that is a component of any of the subcategories of A (i.e. B, C, D, E or F) its name and value would be tagged as an "other component of A" which is true but not exactly precise and results in an loss of the information about nesting and relationships. Definition of technical constructs for each business concept is however impractical and therefore such structures are usually applied only under the major categories. When preparing a report, a filer shall apply the business tags (A, B, C, D, E, F) unless they are not matching the meaning of facts in their reports, in which case they shall use the "technical" concepts or the "expandable" constructs (depending on which are provided in the base taxonomy) as presented on an example in Figure 6.

FIGURE 6. EXAMPLE OF A FINANCIAL STATEMENT TO DEMONSTRATE "TECHNICAL" EXTENSION

According to the simplified exemplary financial statement presented in Figure 6, a filer is able to tag A, B and E using the base taxonomy tags. X, Y and Z are the extension concepts. In case of the base taxonomy extension using the "technical" concepts, a filer would tag:

- "X" as "Name of other component of A (1)" and "10" as "Value of other component of A (1)",

- "Y" as "Name of other component of A (2)" and "20" as "Value of other component of A (2)",
- "Z" as "Name of other component of A (3)" and "10" as "Value of other component of A (3)"

in this or different order (i.e. X could be first, second or third component of A). In case of a technical extension using an "expandable" construct, the results is similar but the key uniquely distinguishing each pair of name and value is provided by a filer (usually as a sequential number), for example the tagging could look as follows:

- "X" as "Name of other component of A", "10" as "Value of other component of A" for key value "1",
- "Y" as "Name of other component of A", "20" as "Value of other component of A" for key value "2",
- "Z" as "Name of other component of A", "10" as "Value of other component of A" for key value "3".

Alternatively, the key, instead of being an artificial unique number, could be the actual name of the other component.

The advantage of the "expandable" construct over the repeated name and value subelements is smaller, easier to define, maintain and read taxonomy. Moreover, in case of the latter, there is a risk that the number of repeated name and value subelements provided in the taxonomy may be insufficient to cover some extreme cases while most of the reports would use only a small subset of it. From the technical perspective however, application of the "expandable" constructs may be perceived as more difficult for implementation in solutions, as less commonly applied approach (yet still part of the XBRL standard and a valid approach).

In addition or as a replacement of the technical constructs, extension of the IFRS taxonomy may also define business concepts commonly applied in reports but missing in the IFRS taxonomy. For example, as presented on Figure 7, a regulator extending the IFRS taxonomy may decide that concepts X and Y are commonly represented in reports and therefore should be included in the taxonomy provided by filers.

5.4 Annex IV – ESMA Field Test Report

Table of Contents

Appendix 1 Report of the service provider on the ESEF Field Tests

1 Executive Summary

This report summarises the work undertaken by ESMA in order to fulfil the requirements of the mandate received under the Transparency Directive (TD) to perform field tests on the technical solution proposed to become a European Single Electronic Format (ESEF).

The ESEF field tests were designed to assess whether the proposed rules in the Regulatory Technical Standard (RTS) on ESEF are practicable and to determine if and to what extent they had to be improved in order to increase comparability and reduce the burden on preparers. Furthermore, they allowed ESMA to assess the effort necessary to comply with the proposed requirements.

In the field tests, ESMA provided support to 25 volunteer issuers from 13 different countries and 19 different industries to transform their IFRS consolidated financial statements to the machine-readable Inline XBRL format that is proposed to be used for ESEF. Issuers remotely attended a brief webinar education session and then mapped their IFRS consolidated financial statements to the core taxonomy. Then, during 1.5 days-long on-site workshops at ESMA's premises, the marking up of the IFRS consolidated financial statements was carried out using software tools made available by volunteer software providers.

After the completion of the transformation of the participating issuers' financial statements to Inline XBRL, a survey was launched to collect their feedback. Participants expressed a high degree of satisfaction with the field tests and the overall complexity of the tagging effort was considered moderate to low. The measured effort to transform the IFRS consolidated financial statements was in line with ESMA's expectations. Furthermore, the participants deemed the core taxonomy to be used for ESEF satisfactorily complete, although some of them found it not easy to browse and search it.

A number of observations made in the course of the field tests were taken into account in the development and preparation of RTS and guidance.

2 Reasons for publication

1. ESMA was empowered by Article 4(7) of the Transparency Directive 2004/109/EC (TD) as last amended by Directive 2013/50/EU to draft an RTS specifying an electronic reporting format in which annual financial reports will have to be prepared from 2020. After consulting stakeholders and the ESMA Securities and Markets Stakeholder Group (SMSG), ESMA concluded in its Feedback Statement[1] on the consultation that:

   a) all annual financial reports should be prepared in XHTML;
   b) where they contain IFRS consolidated financial statements, these should be marked-up with XBRL tags using the IFRS Taxonomy;
   c) the XBRL tags should be embedded in the XHTML document through the Inline XBRL technology.

2. After the publication of the Feedback Statement, ESMA developed in the first half of 2017 further proposals of detailed technical specifications.

3. Article 4(7) of the TD contains a requirement for ESMA to conduct appropriate field tests. These field tests were carried out from June to August 2017 to assess whether the considered detailed technical specifications are practicable and to determine if and to what extent they have to be improved in order to increase comparability of annual financial reports and to reduce the burden on preparers.

4. This report provides an overview of the ESEF field tests, detailing the structure, content, lessons-learnt and feedback received from issuers and software vendors.

3 Objectives and structure of the field tests

5. In the field tests, the IFRS consolidated financial statements of a number of volunteer issuers were transformed to Inline XBRL. In doing so it was possible to:

   a) Test the core taxonomy files prepared by ESMA that extend the IFRS Taxonomy through a hands-on exercise of mapping financial statements of a variety of issuers from a range of jurisdictions and industries;
   b) Test a number of software tools currently available on the market to mark up financial statements;
   c) Test whether the draft specifications developed by ESMA are practicable.

6. To carry out the field tests, ESMA sought participation from:

   a) Volunteer issuers from a wide variety of industries on European regulated markets preparing IFRS consolidated financial statements;

b) Software vendors.

7. In the field tests, ESMA focused on the preparation of the reports and not on their consumption. However, ESMA will publish a number of the reports created in the course of the field tests to allow market participants to familiarise themselves with the Inline XBRL technology.

8. ESMA was supported in the field tests by BR-AG, a service provider having the expertise in the Inline XBRL technology necessary to conduct the field tests. BR-AG is in the following of the report referred to as 'the service provider'. The service provider prepared a report on the field tests, which constitutes the basis for this report and is attached to this report as Appendix 1. The field tests consisted of the following stages:

   a) Publication of a call for volunteer issuers and software vendors. The software vendors were requested to provide software tools adapted to the draft ESEF specifications and to the core taxonomy;
   b) Selection of participating issuers and software tools;
   c) Workshops in which the IFRS consolidated financial statements were transformed to Inline XBRL by participating issuers;
   d) A survey of participating issuers on the field tests;
   e) Analysis of the lessons learned.

4.1 Issuers

9. ESMA published its call for volunteers on 28 June 2017. Forty-four issuers from 14 different countries expressed interest to participate in the field tests, of which 25 participants were selected. ESMA strove to ensure a wide variety in terms of country of origin and industries represented. Furthermore, ESMA ensured also that a number of small and medium-sized issuers were included in the field tests. Priority was given to issuers that preliminarily agreed that the Inline XBRL reports created in the course of the field tests can be published on ESMA's website.

10. The following graphic provides an overview of the geographical origin of the participating issuers.

4.2 Software vendors

13. In order to select software products to transform the IFRS consolidated financial statements of the participating issuers to Inline XBRL, a call for software volunteers was

438

published at the same time as the call for issuer volunteers. ESMA defined a number of requirements that a tool should fulfil in order to be selected.

14. The software vendors were requested to submit a self-assessment of the level of compliance of their tools with these requirements and in case of non-compliance with one or more of the requirements, the software vendor was required to suggest alternative solutions or mitigating actions. The service provider evaluated those self-assessments and eventually ESMA selected five different software products for use in the field tests.

15. Further details on the requirements and the selection of software tools deployed in the field tests can be found in Appendix I.

5 Transformation of IFRS consolidated financial statements to Inline XBRL by participating issuers

16. In order to enable participants to transform their IFRS consolidated financial statements to Inline XBRL, the service provider started with organising a short online preparatory webinar in which the structure of the core taxonomy was explained. Furthermore, issuers received instructions on how to map the disclosures in their IFRS consolidated financial statements to the core taxonomy, and further supportive literature.

17. Following that, the participating issuers were requested to map themselves the disclosures in their IFRS consolidated financial statements to the core taxonomy. To support the participants in this task, the service provider set up a helpdesk.

18. Finally, the participants were split in six groups and for every group a workshop lasting 1.5 days was held at ESMA's premises. During these workshops, the participants marked up their IFRS consolidated financial statements with XBRL tags using the selected software tools. These workshops were held in July and August 2017. Participating issuers were supported in this exercise by ESMA staff, by representatives of the IFRS Foundations' taxonomy team and by the service provider.

19. The preparation of the Inline XBRL documents was based on draft specifications that were published[2] ahead of a public workshop that was held on 6 June 2017 at the margins of the Eurofiling/XBRL Europe week. As set out in these draft specifications and eventually in the draft RTS, the primary financial statements were marked up in detail, whereas the notes were marked up with labels for entire sections (block tagging).

6 Survey of participants

20. After the completion of the transformation of the participating issuers' financial statements to Inline XBRL, a survey was launched to collect the feedback of the participants. As shown in graphic 2 below, overall, the respondents showed a high satisfaction with the field tests (3.9 on a scale of 1-5 with 5 being very satisfied).

21. According to the participants, the field tests helped them to significantly increase their understanding of the ESEF requirements (the average score of their self-assessed understanding increased from 2.85 to 4.0 on a scale of 1-5).

22. The participants assessed the complexity of the overall tagging effort to be moderate to low (2.7 on a scale of 1-5, with 1 being very low and 5 being very high). However, they perceived some of the detailed requirements to be slightly more complex, most notably the creation of extension elements (the complexity being assessed on average at 3.2) and the definition of calculation relationships (the complexity being assessed on average at 3.1). The participants' complexity assessment of the different tagging requirements is depicted below in graphic 4.

Average assessment of complexity of tagging requirements
(1 being very low and 5 being very high)

23. According to the survey, the median time spent by participating issuers to prepare for the field tests was 7.5 hours. The median time spent on mapping the disclosures in the IFRS consolidated financial statements to the core taxonomy was 18 hours. Together with the 1.5 days spent in the workshops and the time that was in some cases necessary to finalise the Inline XBRL reports, the overall effort does not seem to exceed the effort and costs expected according to the Cost-Benefit Analysis (CBA) on ESEF that was published together with the Feedback Statement. According to the CBA, the costs for the first time preparation of an Inline XBRL report was estimated to be between 8,200 EUR and 13,000 EUR.

24. The participants to the field tests considered the coverage of the taxonomy (i.e. the degree to which the taxonomy provides a sufficient number of elements to allow tagging of the disclosures in the IFRS consolidated financial statements) to be moderate to high (3.15 on a scale of 1-5 with 1 being totally incomplete and 5 being totally complete). The ease of searching and browsing the taxonomy is considered to be moderate (2.9 on a scale of 1-5 with 1 being very difficult to 5 being very easy).

25. The reliability of the software tools was considered to be relatively high (3.15 on a scale of 1-5) whereas their user friendliness could be improved (2.8 on a scale of 1 to 5).

26. For further details on the survey, refer to Appendix I.

27. In summary, the survey showed a rather high degree of satisfaction of the participants with the field tests. The participants to the survey perceived the complexity of the tagging effort to be moderate and considered the taxonomy satisfactorily complete. However, some of them found the taxonomy not easy to browse and search. The software tools were considered reliable but somewhat lacking user friendliness.

7 Lessons learned in the field tests and impact on the ESEF specifications

28. The field tests were carried out based on the draft ESEF specifications, in particular the draft of the core taxonomy and the draft filing rules that were published ahead of a public workshop in June 2017.

29. In general, no major problems occurred in the transformation of the IFRS consolidated financial statements to Inline XBRL according to ESMA's draft specifications. The median time and effort spent by issuers is in line with the expected effort according to the CBA that was published together with the Feedback Statement. The software tools generally supported the preparation of the Inline XBRL documents. Moreover, the core taxonomy together with the other specifications enabled the transformation of the disclosures in the IFRS consolidated financial statements to machine-readable data.

30. However, some problems with the software tools were observed, e.g. the inclusion of entity information in the extension taxonomy that is required for filings to the US-SEC but not required under ESEF, output files not forming a taxonomy package, or technically invalid extension taxonomies. However, it has to be considered that there was only very limited time for software vendors to adapt their tools to the ESEF specifications and that it can be expected that the software tools will significantly improve by 2020.

31. A number of observations made in the course of the field tests challenged some of the assumptions that had been made before were taken into account in the development of the ESEF specifications. The main changes to the ESEF specifications are listed below:

   a) Some issuers tended to create an extension to mark up a disclosure in their IFRS consolidated financial statements if the label of the element contained in the core taxonomy did not match the label of the corresponding line item, even though the element's definition matched the accounting meaning of the line item. To avoid this, ESMA concluded that issuers should be allowed to add company specific labels to the elements in the applicable taxonomy.

   b) As set out in the draft ESEF specifications, extension elements created by issuers were anchored to the elements in the applicable taxonomy that are closest in accounting meaning and/or scope. For this purpose, two relationships were used: one indicating that the extension element would be identical to the element in the core taxonomy and the other indicating that the extension element would have a wider or narrower accounting meaning and/or scope than the closest element in the core taxonomy. In the field tests it became clear that there are only very few cases in which the relationship indicating identity between the extension element and the element in the core taxonomy could be used. Furthermore, it was observed that there was no need for anchoring of extension elements that are used to mark up subtotals in the primary financial statements. Enough information regarding these elements

was already provided through the calculation linkbase. Therefore, ESMA did not include in the RTS requirements to anchor (1) extension elements, which are identical to the element in the taxonomy or (2) extension elements that are used to mark-up subtotals in the primary financial statements.

    c) Several guidance concepts included in the core taxonomy were removed as they were confusing for the participants.

32. The draft RTS on ESEF, the ESEF Reporting Manual and the taxonomy files were amended correspondingly to take these lessons-learned from the field tests into account.

2 Introduction

2.1 Context

Amendments to the Transparency Directive (2004/109/EC) [TD] on the harmonization of the transparency requirements in relation to information about issuers whose securities are admitted to trading on a regulated market were published in the Official Journal of the European Union (2013/50/EU) on 6 November 2013. The requirements for the disclosure of annual financial reports were revised in order to foster transparency and comparability of financial information, by requiring from 1 January 2020 issuers to prepare their annual financial reports [AFRs] in a European single electronic reporting format [ESEF] which has to be defined. The responsibility to develop draft regulatory technical standards [RTS] to specify the ESEF has been delegated to the European Securities and Markets Authority [ESMA]. In order to elaborate this RTS, the TD requires ESMA to make due reference to current and future technological options, assess possible electronic reporting formats and conduct field tests.

2.2 RTS and ESEF specifications

ESMA has carried out a public consultation on the RTS and complemented it with a qualitative, quantitative and technological assessment of the appropriateness of the inline XBRL [iXBRL] technology for the ESEF. One part of the resulting report was devoted to the assessment of iXBRL implementation approaches.

As the result of this assessment, ESMA has decided to develop an ESEF XBRL taxonomy, based on the IFRS XBRL Taxonomy, together with corresponding filing rules that will become part of the proposed RTS. Draft versions of these artefacts were published on the following website: http://standards.eurofiling.info/.

Under article 4 paragraph 7 of the Transparency Directive ESMA is also requested to *"conduct appropriate field tests"*.

This document describes the purpose, scope, process and results of the conducted field tests.

3 Field tests description

3.1 Purpose and scope

The purpose of these field tests was to assess whether the approach considered by ESMA for the ESEF Taxonomy content and structure as well as the set of draft filing rules described in RTS and ESEF specifications are practicable and to determine if and to which extent they may need to be modified in order to increase comparability, and reduce the burden on preparers.

In order to verify the draft ESEF assumptions, the consolidated financial statements of selected issuers were planned to be transformed to iXBRL instance documents according to ESMA's draft ESEF specifications. This should allow to prove applicability of ESEF assumptions in

practice. Moreover, experience gathered during conduction of this task should help in improving these assumptions by indicating where the draft ESEF taxonomy or initial filing rules need changes.

Confirmation of tagged data usefulness for analysis was out of scope of the field test. The reasons for excluding this area from testing were the time constraints for the completion of the field tests and the fact that the variety of data users and data use scenarios does not allow the definition of measures and criteria to be applied in such assessment. Similarly, the process of submission, collection and publication of a report through the Officially Appointed Mechanisms [OAMs] was not included in the field test assessment. However, it is assumed that the iXBRL reports and extension taxonomies created as part of the field test will be published in order to allow interested stakeholders to conduct analysis and test data transmission.

3.2 Assumptions and limitation

Although the purpose of the field test is concrete, the measures and criteria that may be applied to assess its fulfilment are difficult to define and their definition may be subjective. Therefore, the stress and focus was set on overall feasibility of fulfilling the requirements set out by the draft filing rules and the usability of the draft ESEF taxonomy from the standpoint of users and the technical perspective. This includes in particular the possibility of creating issuer extension taxonomies based on the draft ESEF taxonomy and complying with all draft rules regarding the definition of issuer extension elements, taxonomy relationships and tagging of AFRs.

As the plan to develop the RTS assumes its finalisation in 2017, the time to conduct the field test was limited to two/three months. Nevertheless, the planned number of participants and sufficient diversity of represented industries and jurisdictions was achieved.

One of the key risks identified before the field test commenced related to availability of software applications enabling definition of issuers' extension taxonomies, tagging of reports and generation of iXBRL reports. This risks included:
- willingness of software vendors to provide their tools for free of charge use,
- potential issues with setup and lack of proper support during and after workshop due to the short time for preparation of the reporting solutions, summer holiday period or location of a selected vendor in a different time zone,
- coverage of the required functionalities by tools, i.e. creation of extension taxonomy and tagging of a report according to the draft ESEF specifications published externally shortly before the field test.

As described in the next sections of this document, the field test attracted the required number of software vendors. However, the other two risks i.e. setup problems, longer support waiting times and incomplete coverage of required functionalities caused delays in the project timeline and postponed finalisation.

3.3 Timeline

The intention to conduct the field test was publicly announced during the ESMA Meet-The-Market event held on June 5th 2017 as part of the Eurofiling XBRL week in Frankfurt[1]. This was followed by a call for volunteers[2] published on June 28th on ESMA's website[3] and further distributed using channels such as mailing lists, national regulators, stock exchanges, associations of listed companies, etc.

The field tests started in early July 2017 with preparatory tasks such as creation of application forms, coordination of requests for participation, arrangement of facilities for workshops and other organisational matters. Field test webinars and workshops (discussed in details in the next sections of this document) were held between mid-July and throughout August up to the first week of September as described in detail in Annex 1 – Schedule of sessions and workshops. September was devoted to the finalisation of the reports such as completion of tagging, confirmation of extension concepts and their anchoring, correction of reports layouts, etc.

3.4 Approach

Participating issuers were distributed in six groups. The exercise was identical for each group and consisted of 6 main phases as described on Figure 8.

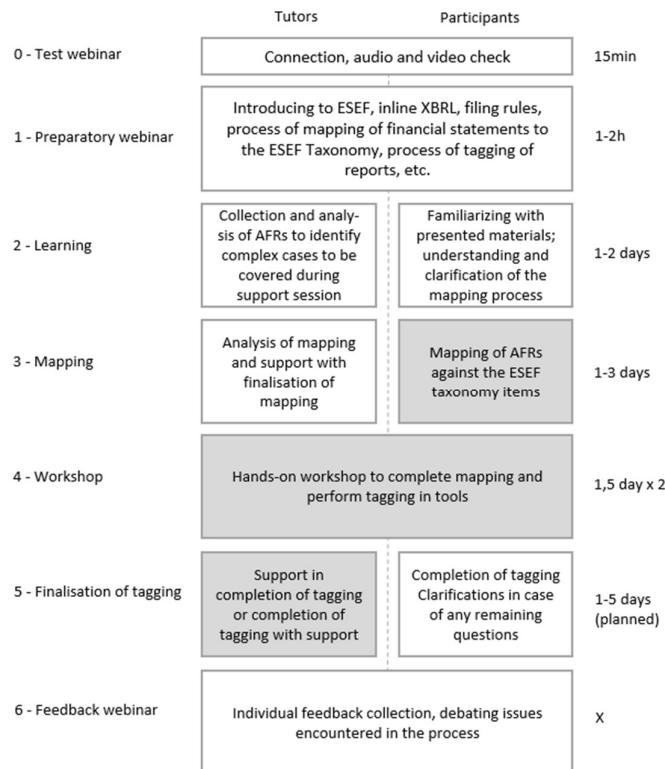

FIGURE 8. PHASES OF THE FIELD TEST EXERCISE.

The first phase was an informational and educational session conducted in form of a webinar. Preparatory webinars were held on July 18th , August 1st and August 18th.

The duration of a preparatory webinar was around one hour including questions from the audience.

All webinars were recorded and shared with participants for further reference or distribution in case of technical issues or sudden change of plans disallowing issuers to attend the session. Participants were also provided a set of links as listed in Annex 3 – Useful resources to documents explaining in more details topics related to XBRL, IFRS, etc. as well as instructions on how to run the ESEF taxonomy in tools in order to browse its content and search for terms matching disclosures from their financial statements.

The webinars aimed to provide participants with answers to the following questions:
- What is ESEF and why are field tests needed?
- What is XBRL and iXBRL?
- What are the IFRS and ESEF XBRL Taxonomies?
- What are the ESEF Filing Rules and Tagging Rules?
- How may the mapping and tagging process look like?
- What is required from the field test participants?

Answer to the last question included description of the next phases of the exercise, in particular explanation of the mapping task to be completed before the workshop. In order to perform this

task, participants were provided with the draft ESEF taxonomy whose content could be previewed in MS Excel, PDF or dedicated tools and a set of useful hints and tips helping in the mapping process. The participants were requested to compare the content of their consolidated financial statements according to IFRS with the terms defined in the ESEF Taxonomy and search for taxonomy elements that match the meaning and scope of data to be tagged. In case where text search or browsing of taxonomy content resulted in a match found, issuers were requested to add a comment (in Word, Excel, PDFs version of the AFR) identifying the matching ESEF taxonomy concept. An example of such comment is presented on Figure 9.

FIGURE 9. EXAMPLE OF LINES IN REPORT TAGGED WITH MATCHING ESEF TAXONOMY CONCEPTS.

When no matching concept was available, issuers were asked to use different colour and identify concepts from the ESEF taxonomy with wider and narrower meaning/scope as exemplified on Figure 10.

FIGURE 10. EXAMPLE OF LINES IN REPORT TAGGED WITH WIDER/NARROWER ESEF TAXONOMY CONCEPTS.

The time between the preparatory webinar and the workshop was spent on the preparation of the initial mapping as explained above. Tutors facilitated this process by providing technical and content-related support. In the meantime, tutors were also involved in the process of selection of tools to be used for the workshops. This included monitoring of a functional mailbox set up for inquiries on this topic, analysis of replies to the requirements form, confirmation of provided answers via teleconferences and webinars and proposing alternative options to participants and ESMA for final selection. For practical reasons only one tool was to be used in each of the six workshops. Selection was limited also by technical factors such as possibility

to install external applications on laptops of participants or requirements regarding internet connection. When possible, participants were provided with the choice between two tools and the decision which tool should be used was taken by the majority of participants in the respective workshop. Upon acceptance, selected software vendors were provided with the consolidated financial statements of participants in order to preload them in their solutions and configure (e.g. create users) the tools for use during the workshop.

The following phase was an on-site workshop conducted in Paris and hosted by ESMA in its premises. Six workshops were held in total (one for each group of participants) and were arranged in three sessions:
- groups 1 and 2 – July 26-29,
- groups 3 and 4 – August 09-11,
- groups 5 and 6 – August 28-30.

The duration of each workshop for each group was estimated to be 12 hours (excluding breaks) with the following timing:
- day 1: 10:00 – 18:00,
- day 2: 09:00 – 13:00 / 14:00 – 18:00,
- day 3: 09:00 – 17:00,
where day 1 and morning of day 2 (until lunch) was dedicated to one participating group while afternoon of day 2 and day 3 to the other group.

Each workshop started with the presentation of the interface and functionalities of a selected tool. This was followed by a hands-on exercise where participants supported by tutors used the initial mapping created before the workshop to define their extension taxonomy structures and concepts and to tag their reports. In the course of this exercise, tutors and members of the IFRS Foundation's taxonomy team assisted the participating issuers with the identification of potentially applicable taxonomy elements. However, eventually it was the issuer's decision, which elements would best represent the accounting meanings of the items in the IFRS consolidated financial statements and which elements in the IFRS Taxonomy the extension taxonomy elements should be anchored to.

Several participants managed to fully complete the tagging during the workshop. However, a few of them did not finish the task. The level of completion achieved depended on:
- tools used during the workshop, in particular:
    o functionalities (e.g. number of steps required to define extension taxonomy structures, manner of creating calculations or tagging, etc.),
    o user friendliness of interface (e.g. meaningful error messaging, support for drag-and drop or copy-paste methods, etc.),
    o quality and format of reports provided by participants and preloaded by vendors (e.g. complex tables spanning across pages, images and charts, wrongly formatted numeric values, missing sections of a report, …),
    o reliability (e.g. responsiveness, restoring from backup after crashes, etc.),
    o availability of vendor support during the workshop and issue resolution time;
- size and complexity of the IFRS consolidated financial statements (e.g. number of lines in the PFSs, number of notes and accounting policies, number of questions regarding mappings resulting in number of extension concepts for anchoring, etc.),

-   individual skills of a participant (computer skills, familiarity with accounting and AFR, etc).

A few participants who did not complete the tagging and were able to use the tools outside of the workshop decided to finalise the task. Others asked the tutors to finalise the tagging.

As none of the tools supported definition of anchoring as described in the draft rules on ESEF, tutors collected information about wider and narrower ESEF taxonomy concepts for each issuer extension item in a form of an Excel worksheet. This file was distributed for internal review and subsequently to external review by issuers. After confirmation of choices, tutors included the anchoring relationships in the extension taxonomy output from the tools following the draft filing rules.

The final phase was collection of feedback from the participating issuers. The survey consisted of 16 questions aiming to measure the effort required to complete the task and assess perception of the participants regarding the reporting process and its artefacts (e.g. taxonomy, filing rules, tools, etc.). A Google Form version of the survey was distributed to the participants on October 25th. Participants who for any reasons were not able to access this version were sent questions in MS Word format. 22 replies from 20 issuers were collected. Summary of the results is presented in the findings sections of this document.

3.5 Participants

A call for volunteers was aimed at issuers willing to devote resources and tag their IFRS consolidated financial statements as well as software vendors ready to share their tools and provide support in order to enable tagging of these IFRS consolidated financial statements.

3.5.1   Issuers

Issuers were asked to express their interest in participation by sending an e-mail to esef@esma.europa.eu. Following this e-mail, they were provided a short questionnaire gathering information, among others, about the country of incorporation, number of employees and economy sector. This information was used to ensure a balanced selection of issuers with a wide variety regarding location, size and industry. Only issuers whose securities are traded on a stock exchange in one of the EU Member States were eligible to participate. For practical reasons only issuers with an English version of the AFR could participate in the field test. Furthermore, only volunteers that preliminarily consented with publication of the iXBRL reports created during the field test exercise were selected. Volunteers were also asked to indicate their availability and preference for the workshop dates. As mentioned above, six workshop were planned for the field test. Due to logistics about four issuers were expected for a workshops with maximum two participants per issuer.

Based on the above assumptions, 25 issuers took part in the field test as listed in Table 12. They were selected from over 40 applications with an attempt to achieve maximum variety in terms of size, sector and location.

TABLE 12. ISSUERS PARTICIPATING IN THE FIELD TEST INDUSTRY THEY OPERATE

As presented in Table 12, selected issuers identified themselves as representatives of one of 19 sectors, where most of the sectors were represented by one or two companies. Due to the high importance of the banking industry, five representatives of this sector were invited to participate.

In terms of diversity in size measured by revenues, 18 participants disclosed revenues over 1 billion EUR, three between 50 million and 1 billion EUR and four below 50 million EUR. In terms of value of assets, five companies hold over 100 billion EUR and another 14 over 1 billion EUR. Other measures such as year-end results are presented in Table 13 below.

Issuers were represented typically by one person with accounting or investors' relations background or two where both were accountants or one was from IT.

3.5.2 Software vendors

An iXBRL report is a essentially an HTML website with additional tags that annotate numbers or fragments of texts and identify their accounting meaning so that this information can be automatically extracted and consumed by tools performing comparison, analysis, etc. A software tool is needed to transform the IFRS consolidated financial statements to the iXBRL format. To cope with this requirement, software vendors were invited to participate in the field test by allowing the free-of-charge use of their applications for the purposes of the exercise and by adapting their solutions to enable preparation of IFRS consolidated financial statements according to the draft ESEF specifications. As described in the next paragraphs of this section, the process of selection of the software to be used was non-discriminatory and non-preferential.

Software vendors that expressed their willingness to make available their tools were informed that tools would be primarily operated by the participating issuers who were to try to create iXBRL reports during one-and-a-half-day-long workshops, preceded by a mapping exercise when issuers preliminarily matched items from their reports against the ESEF taxonomy. Completion of tagging was planned to be concluded after the workshop by tutors or participants, depending on availability of time and possibility of off-site use of the tools by the latter.

In order to participate in the field test exercise the solution to be used during and after the workshop ideally should fulfil all or at least most of the following requirements:
1. enable loading/opening, editing and tagging in iXBRL of an existing financial statement provided in MS Word/PDF/HTML format;
2. enable previewing and search (based on labels, references, etc.) of draft ESEF taxonomy content[4] (concepts and relationships);
3. enable creation of issuer extension taxonomy containing definitions of issuer specific concepts and relations in presentation, calculation and definition linkbases [5] and outputting valid[6] XBRL taxonomy files;
4. enable creation of draft anchoring relationships[7];
5. enable detail tagging in iXBRL of values in Primary Financial Statements (using ESEF taxonomy or issuer extension concepts, including dimensions);
6. enable block tagging in iXBRL of notes and disclosures to the financial statement (using ESEF taxonomy or issuer extension concepts);

[5] As described in http://standards.eurofiling.info/#extensions "Numeric facts shall also be utilized in calculation linkbase relationships where possible and applicable. This relates in particular to arithmetic relationships between line items from the primary financial statements, which must be included in the filer's extension taxonomy." Moreover filers shall correctly apply period end, period start and total label roles to enable deduction of cross period calculation based on the presentation linkbase content". These were some of the checks performed when assessing the tools.
[6] i.e. valid according to the XBRL 2.1, XBRL Dimensions 1.0 and other relevant XBRL specifications
[7] As described in http://standards.eurofiling.info/#extensions; please note that not all requirements must be fulfilled in case the missing feature can be replaced by the use of an open source/free XBRL tools which would be the case for this requirement.

7. create valid iXBRL report that can be opened in standard browsers and transformed to XBRL instance document;
8. perform validations of a report against the draft ESMA taxonomy and filing rules;
9. allow the free of charge use by ESMA, participating issuers and tutors during the entire field test period and confirms transfer of all IP rights to the produced XBRL files to ESMA/issuers;
10. provide helpdesk support for the software evaluation, workshops and post-workshop tagging completion period.

Almost 30 enquires were sent to the ESEF functional mailbox. Eight vendors provided a self-assessment of how their tools would fulfil the above mentioned requirements as presented in Table 15 below.

Requirement	Vendor 1	Vendor 2	Vendor 3	Vendor 4	Vendor 5	Vendor 6	Vendor 7	Vendor 8

TABLE 15. SUMMARY OF REPLIES TO THE REQUIREMENTS.

As requested in the form, most of the replies were associated with a comment explaining how the requirement is fulfilled. In several cases the software vendors provided comments that a functionality is not yet available but is planned to be implemented in the future. In this case, it was requested that a vendor suggests alternative means for replacing the missing process or feature. In case a workaround was not provided or offered as additional service that conflicted with the assumed plan for conduction of the field test, a solution was rejected from further evaluation. This concerned in particular tools that did not support creation of taxonomy extensions, which must be developed during the onsite workshop when initial mappings was clarified and tagging was supposed to be completed.

Having initially confirmed fulfilment of requirements, software vendors were asked to conduct short presentations of their solutions to prove that all functionalities are operational and instruct the tutors on the user interfaces and detailed features of tools. These sessions helped also to assess the technical requirements related to installation and use of tools. This was important to ensure that there would be computers available to be used during the workshops in case selected solutions would not run on laptops of participants due to lack of installation rights, impossibility to connect to virtual desktops or simply not meeting minimum requirements. Another constraint was related to Wifi Internet access, which for security reasons blocks selected ports or may not run properly on computers with certain proxy settings. These aspects limited the number of software options provided to participants for selection.

Another important aspect was related to the field test timeline. Most of the existing solutions required additional developments to ensure compliance with the ESEF specifications even at the minimum level of enabling creating extension taxonomies based on the draft ESEF taxonomy content. Moreover, the described above process of selection of tools resulted in only few days that software vendors were provided to load the IFRS consolidated financial statements in their solutions. This caused unexpected issues during the workshops where tables were not properly formatted or sections were missing which disallowed tagging. Another consequence of limited time devoted for loading of IFRS consolidated financial statements combined with variety of input formats in which they were provided (MS Word, Excel, PDF) is low quality of the final output in iXBRL in terms of the formatting and layout. Detailed description of issues related to tagging that impacted the output is described in the Feedback from participants section of this document.

Outcomes of the selection process combined with constraints described above resulted in five solutions being used for tagging of their AFRs, with one tool being used for both groups 4 and 6 whereas the other tools were only used for one group.

Two of the used tools were web-based solutions with internet browser as an interface. One tool was installed on virtual machines accessible via a remote desktop in order to avoid installation and setup. Two other tools required installation on computers of participants or provided by tutors.

3.5.3 Other request to participate

Requests for participation were received also from the national competent authorities, consulting companies, software vendors not having any solutions, academics and others. However, these requests were rejected in all cases as the inclusion of observers could distract the participants and reduce the chance of completion of the assignment in time.

4 Outcomes and findings

Outcomes and findings from the field test relate primarily to verification of initial assumptions towards the ESEF taxonomy and filing rules/guidelines.

When published, tagged reports may be used for other tests, for example by OAMs to prepare their collection and publication systems or by tools enabling analysis of structured data in XBRL. In case of the latter, one particularly interesting area of investigation is evaluation of usefulness of anchoring information provided in extension taxonomies for better understanding of meaning of extension items and potential application in analytical systems.

4.1 Use of ESEF taxonomy elements and extension concepts in tagging of reports

The field test exercise enabled to check in practice the coverage of the IFRS Taxonomy in relation to concepts disclosed by selected issuers as well as evaluate the scope of extensions and identify their origin.

Tagging reports of 25 participating issuers resulted in creation of almost 840 extension concepts. Chart 1 presents the number of extension concepts created by each issuer for each component of the IFRS consolidated financial statements.
CHART 1. NUMBER OF EXTENSION CONCEPTS BY ISSUERS AND COMPONENTS OF AFR.

As presented on Chart 1, the number of extensions varied from as low as three (in case of Nelja Energia) to more than 100 (Generali). These numbers were impacted by:

- the size of each section of the IFRS consolidated financial statements, where companies disclosing more information on the face of the financial statement typically included more positions that are not defined by the IFRS Taxonomy,
- application of specific accounting treatment not defined explicitly by the IFRSs, e.g. split of income and expenses in recurring and not-recurring, inclusion of fair value adjustments in profit or loss,
- disclosure of industry specific concepts, e.g. in case of insurance companies, airlines, banks, that are not defined by general purpose IFRSs and have not yet been included as common practice concepts.

Chart 2 presents the number and share of extension elements by component of the IFRS consolidated financial statements.
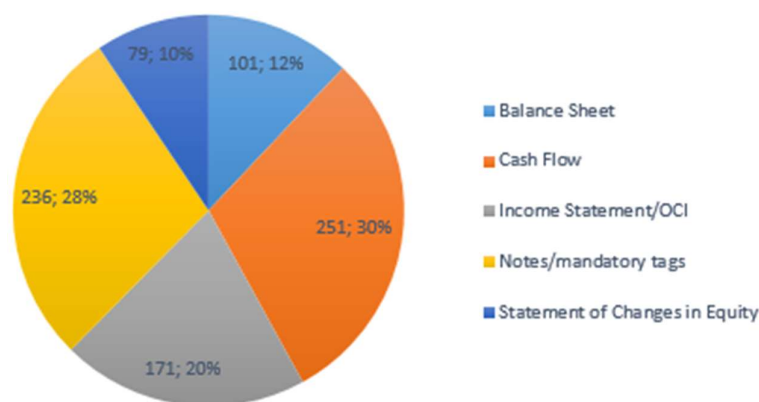

CHART 2. NUMBERS AND SHARE OF EXTENSION ELEMENTS BY COMPONENTS OF AFR.

The majority of extension items was defined to tag the cash flow statements. Interestingly, a high number of extension concepts was required to tag notes and accounting policies. This is related to extensions made in primary financial statements that are further detailed in notes. Each extension typically required an issuer specific element to tag the corresponding note. As expected, balance sheet and statement of changes in equity are mostly standardised and well defined by the IFRS taxonomy therefore required lower number of extension concepts.

Overall, the number of tags applied in components of the IFRS consolidated financial statements is presented in Chart 3.
CHART 3. NUMBER OF IFRS TAXONOMY AND EXTENSION ELEMENTS BY COMPONENT OF THE AFR.

The highest number of tagged entries was related to accounting policies and notes. This was expected as this part of the IFRS consolidated financial statements typically contains many sections detailing positions from all components of the primary financial statements. Additionally, the list of mandatory tags (i.e. those that must be applied if corresponding information is included in the IFRS consolidated financial statements) set out in the draft RTS includes all accounting policy items and text blocks for notes included in the IFRS Taxonomy. The second most numerous part of report is the balance sheet where over 1100 entries were tagged in total. The cash flow statement required most extension concepts compared to the number of items disclosed in this part of the IFRS consolidated financial statements.

The number of extension taxonomy elements used by each issuer to tag its IFRS consolidated financial statements is summarised in Chart 4.
CHART 4. NUMBER OF TAGS PER ISSUER

No issuer required more than 280 elements to tag their report with a few close to this number. The average oscillated around 200 elements. In the majority of cases, the extension concepts were only a small percentage of all items used. There were however a few IFRS consolidated financial statements where the share of extension concepts in overall number of concepts applied was substantial such as in case of Ferrovial where it amounted to one-third of all concepts used.

It was identified, that extension concepts can be divided in two categories:
- subtotals and combinations of two or more existing IFRS concepts,
- company or other specific concepts not covered by IFRSs.

Example of a combination is "Issued capital and share premium" which is not defined in the IFRS taxonomy but both components that contribute to its definition, i.e. "Issued capital" and "Share premium" exist in the IFRS taxonomy as individual concepts. Examples of the other type, i.e. company specific concepts, are for instance "Script dividend" or "Loans to bank ABC". Number and share of extension concepts by type is presented on Chart 5.
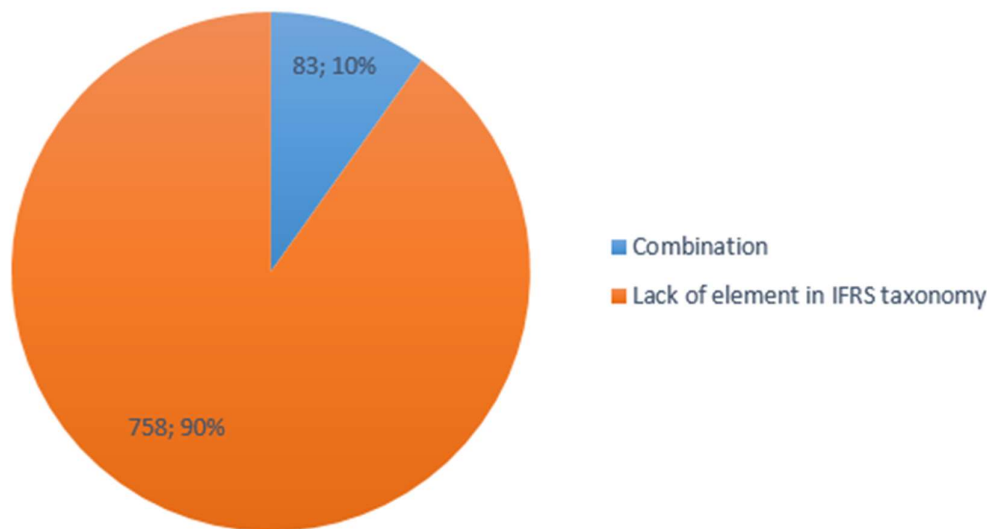

CHART 5. NUMBER AND SHARE OF EXTENSION CONCEPTS BY TYPE.

It was also noted, that the decision whether to define an extension item instead of applying an element already existing in the taxonomy may also depend on the attitude of a person making this choice. In some cases, even small possible subjective differences in the meaning led participants to create an extension concept while in other situations an existing item may be used to tag data that at first glance is only loosely related. As mentioned above, the selection of elements was carried out by the participants and neither ESMA nor the representatives of the IFRS Foundation's taxonomy team took this decision. However, it was identified that some guidance to issuers how to decide whether an extension would be necessary would be very beneficial.

4.2 Feedback from participants

As presented on Figure 8 and indicated in Annex 1 – Schedule of sessions and workshops, the feedback from participants was planned to be gathered during a series of short webinars conducted individually with each issuer to debate overall impression related to the process of tagging, discuss feasibility and correctness of assumptions of the ESEF project and review the outcome result in form of produced by tools iXBRL report. However, due to operational such as:

- longer than expected time to complete materials to be distributed for review, stemming from technical issues related to the use of tools by participants after the workshop,
- need to correct issues in the generated outputs (technical invalidity of extension taxonomies and badly formatted iXBRL reports),
- delayed feedback from issuers and more time consuming interval review,

the outcomes were not ready in time for the planned conduction of the webinars. Therefore, in order to complete the field test exercise, it was decided to replace the teleconference calls by a short survey distributed via Google Forms and MS Word questionnaire.

465

The aim of the survey was to:
- verify if the ESEF requirements are comprehensible/understandable by issuers,
- measure the effort required to comply with ESEF requirements and complexity of this task as perceived by participants,
- collect issuers' opinion on completeness of the ESEF taxonomy and correctness of other assumptions of ESEF project,
- identify fields for improvement.

The survey consisted of 16 questions as listed in Table 16.

Question	Accepted value
1. How satisfied were you with the field test exercise?	1 (Not very) - 5 (Very)
2. How would you rate your understanding of the ESEF requirements BEFORE the field test exercise?	1 (Low) - 5 (High)
3. How would you rate your understanding of the ESEF requirements AFTER the field test exercise?	1 (Low) - 5 (High)
4. How would you rate the level of complexity of the following tasks that were carried out in the course of the preparation of the XBRL instance document:	
a) Mapping of financial statement positions against ESEF taxonomy concepts	1 (Low) - 5 (High)
b) Identifying a closest match in the ESEF taxonomy in case no base taxonomy item directly corresponded to a tagged disclosure	1 (Low) - 5 (High)
c) Creation of issuer specific extension elements (including attributes such as instant/duration, credit/debit, etc)	1 (Low) - 5 (High)
d) Defining presentation relationships reflecting the structure of a financial statement	1 (Low) - 5 (High)
e) Creation of calculations to define arithmetical relationships	1 (Low) - 5 (High)
f) Tagging of financial statement by marking up numbers in primary financial statements or sections of notes with block tags	1 (Low) - 5 (High)
5. If you found the process complex, please briefly explain your judgement	Text
6. How much time (in hours) did you spend preparing (studying distributed materials, familiarizing with ESEF taxonomy) for the field test exercise?	Number
7. How much time did it take you to initially map your financial statements against the ESEF taxonomy?	Number
8. How much time did it take you on average to find and identify a closest match in the ESEF taxonomy in case no base taxonomy item directly corresponded to a tagged disclosure (please provide average time in minutes per disclosure)?	Number
9. How would you rate the effort required to map these components:	
a) Statement of financial position	1 (Low) - 5 (High)
b) Income statement / Statement of other comprehensive income	1 (Low) - 5 (High)

c) Cash flows statement	1 (Low) - 5 (High)
d) Statement of changes in equity	1 (Low) - 5 (High)
e) Block tagging of notes and tagging mandatory concepts if present in a report	1 (Low) - 5 (High)
10. How would you rate the organisation of the ESEF taxonomy in terms of ease of searching and browsing of its content?	1 (Difficult) - 5 (Easy)
11. What would you change/add to simplify browsing and searching in ESEF taxonomy easier?	Text
12. How would you rate ESEF taxonomy completeness in terms of coverage of standard tags to be applied in reports?	1 (Incomplete) - 5 (Complete)
13. How do you rate the software tool used for the workshops in terms of:	
a) User friendliness	1 (Low) - 5 (High)
b) Reliability	1 (Low) - 5 (High)
c) Facilitating the process of defining taxonomy extension and tagging	1 (Low) - 5 (High)
14. What would you improve in the tools provided?	Text
15. What were your key take aways from the test field exercise?	Text
16. Any additional feedback and comments?	Text

TABLE 16. SURVEY QUESTIONS AND ACCEPTED VALUES.

As presented in Table 16, the majority of questions required an answer using a scale from 1 to 5.

The summary of replies can be found in Annex 2 – Answers to survey.

The average overall satisfaction was rated as rather high (4) with six participants very satisfied and one unsatisfied.

Average understanding of ESEF requirements before field test exercise was assessed as medium (3) and increased to high (4) after the field test exercise.

The average level of complexity of the tasks that were carried out in the course of the preparation of the XBRL instance document was assessed as medium (3). The most complex task according to participants was to identify a closest match in the ESEF taxonomy in case no base taxonomy item directly corresponded to a tagged disclosure. The easiest task was to tag financial statement by marking up numbers in primary financial statements or sections of notes with block tags.

The average time spent on preparing (studying distributed materials, familiarizing with ESEF taxonomy) for the field test exercise was 14 hours and the median amounted to 7,5 hours (with minimum of 1 hour and maximum of 80 hours). The initially mapping of financial statements against the ESEF taxonomy took the participants 27 hours on average with median of 18 hours.

Here the shortest time was 3 hours while the longest 200 hours. Average and median time to find and identify a closest match in the ESEF taxonomy in case no base taxonomy item directly corresponded to a tagged disclosure was 10 minutes.

The average effort required to map various components of the financial statement varied from relatively low/medium (less than 3) for "Statement of financial position" and "Block tagging of notes and tagging mandatory concepts if present in a report" to medium/relatively high (around 3.5) for "Income statement / Statement of other comprehensive income", "Statement of changes in equity" and "Cash flows statement". The latter required significant effort according to seven participants.

Organisation of the ESEF taxonomy in terms of ease of searching and browsing of its content was assessed to be moderate. The same applies to the ESEF taxonomy completeness in terms of coverage of tags to be applied in reports.

The user friendliness of the tools was considered by participants to be rather low but mostly rather reliable. The tools are perceived to acceptably facilitate the process of defining taxonomy extension and tagging.

The main take-aways indicated by participants include better understanding of the ESEF requirements, which shall help in preparation for real reporting, familiarity with the ESEF taxonomy and possibility to learn the functionalities and support offered by software applications enabling to create iXBRL reports.

4.3 Readiness of software and encountered issues

In general, the software applications used during the field test allowed to perform the task i.e.:
- to create issuer specific taxonomy extension relationships by browsing the content of the ESEF taxonomy or adding extension concepts and
- to tag disclosures of the IFRS consolidated financial statement by applying these concept on numbers and narrative sections of a report.

As described in the previous sections of the report, the timeline and schedule of the field tests did not provide sufficient time for software vendors to fully prepare their tools for the exercise. Firstly, the detailed draft assumptions for ESEF specification were exposed publically only in June, i.e. one month before the field test started. Secondly, the period between the decision on the software to be used and date of the workshop was only few days. Therefore vendors were given very limited time to configure applications, i.e. to extract information from the IFRS consolidated financial statements provided by participating issuers in MS Word, Excel or PDF to a graphical user interface of tools where tagging is performed. Other modifications involved also adjustments to regional settings for numbers and date formats applied in provided financial statements.

Solutions used during the field test are applied in production environments and are mostly designed for filing to the US SEC. However, the ESEF taxonomy elements were loaded into the tools to enable issuers to select them. This impacted interfaces, which for example expected certain sections to be tagged as per the EDGAR rules and therefore presented non-

applicable errors. It also resulted in the produced output files (i.e. extension taxonomy and iXBRL report) being invalid according to the ESEF specification. In case of the latter, the commonly encountered issues included:

- reference to the US-GAAP taxonomy files,
- inclusion of US-GAAP mandatory Document and Entity Information taxonomy information in the extension,
- reference to IFRS Taxonomy directly rather than to the draft ESEF taxonomy,
- reference to an IFRS/ESEF taxonomy on a local drive,
- output files not forming a taxonomy package,
- repeating labels of ESEF taxonomy elements or requiring to label each applied ESEF taxonomy element,
- label linkbase language set up for "en-US",
- application of other than suggested L3C naming convention for extension elements or construction of extension taxonomy namespaces and prefixed based on dummy values,
- technically invalid extension taxonomy (various types of errors),
- XHTML output file being invalid iXBRL (e.g. with regard to use of ix:continuation tag),
- setup of "segment" rather than "scenario" as a container for dimensional information in both the extension taxonomy and iXBRL file,
- use for entity scheme and identifiers a dummy SEC CIC code rather than LEI,
- heavy use of locally defined CSS styles rather than defining central repository with global application.

Interfaces were also not prepared to create alternative calculations, they did not enable to follow the guidance on the construction of the presentation linkbase in order to be used for documenting arithmetic relationships and, as expected, did not enable definition of anchoring relationships. Therefore, this part of the extension taxonomy was missing in the output files.

The indicated above inefficiencies result from the design of tools which use was focused on a limited application for one or two reporting regimes. Therefore, many features were hard coded or embedded deeply in the softwares' architecture. Despite this fact, for those reports that are completed, the tools were able to create filings with enough quality to be manually fixed within a reasonable time. Each generated iXBRL report and extension taxonomy was corrected to ensure they are technically valid and to align the output to match the ESEF specification to the maximum possible extent. Having more time to prepare and adjust the solutions, it is expected that all deficiencies will be eliminated.

4.4 Impact on ESEF specifications

The field test was conducted using ESEF specifications, in particular the draft ESEF taxonomy and filing rules, distributed publically in the beginning of June. Since then, these artefacts were discussed internally but also extensive feedback from the market stakeholders was received. Experience gathered during the field test enabled verification of the initial assumptions and assessment of indicated by internal analysis as well as collected through external feedback directions for changes.

Below is the summary of modifications included in the ESEF taxonomy and filing rules as a result of the field test.

4.4.1 ESEF taxonomy

Modifications included in the draft version of ESEF taxonomy as a result of the field test outcomes and experience include, but are not limited to:

- Change in the approach for use of guidance concept in order to identify placeholders serving as starting points for extension taxonomy relationships. These guidance concepts defined in the draft ESEF taxonomy were commonly mistaken for the placeholder concepts they provided a guidance for. Therefore, it was decided to rename the placeholder concepts so that their label suggest their purpose. For example the draft ESEF taxonomy attached "This item MUST be used as a starting point for profit or loss statement" guidance concept under "Profit or loss" placeholder item. The updated version does not include definition of this guidance concept, instead it changes the label of the "Profit or loss" placeholder to "Profit or loss placeholder - this item MUST be used as a starting point for profit or loss statement". This has been applied to all placeholder items from the primary financial statements.
- Removal of guidance concepts identifying the intended use of dimensions for a given PFS as a result of detecting situations in a few IFRS consolidated financial statements which required dimensions in sections where they were initially not envisaged by the draft ESEF taxonomy.
- Change the wording of the comprehensive income placeholder to indicate its use when both, the income statement and comprehensive income statement are one section but also when comprehensive income is a separate section.
- Modification to the ESEF taxonomy structure, e.g. inclusion of dimension default members relationships in the referenced by extension taxonomy core part of ESEF taxonomy, addition of placeholders for dimensionally unqualified line items, etc.

4.4.2 Filing rules and guidelines

The experience gathered during the field test led also to changes in the filing rules. These modifications include deletion, addition and revision of rules. A brief summary of the impact resulting from the field test is described in the next paragraphs.

It was observed, that issuers feel more comfortable selecting ESEF taxonomy elements to tag data when they are allowed to provide additional labels which better reflect the title used in their report. Therefore, it was decided to remove the rule prohibiting adding labels to the ESEF taxonomy elements and allow including company specific labels for these items. This change lead also to further reconsideration of the anchoring rules, in particular the rule related to creation of an extension concept, which is very close in meaning and scope to an existing base taxonomy concept and shall be therefore anchored to it with a specified arcrole. It is considered that enabling issuers to add labels to IFRS taxonomy concepts and providing in such case additional documentation is a sufficient alternative for the anchoring of similar concepts. Moreover, it was noted that the "essence-alias" relationship that was initially planned to be used alongside a relationship that indicated that an extension element is wider or narrower in scope or meaning than an element in the ESEF taxonomy, was very rarely used. Therefore,

the use of the 'essence-alias' relationship or another similar relationship was deemed unnecessary. The anchoring is thus only carried out through the 'wider-narrower' relationship.

Other changes in rules on anchoring include specific treatment of subtotals, i.e. items included in the financial statements that sum up two or more items contained in the primary financial statement. Subtotals are not required to be anchored as the wider and narrower elements are already identified by means of the calculation linkbase.

Another recommendation to issuers that was formulated as a result of the field test was that issuers should tag a disclosure with an element from the IFRS Taxonomy that is wider in scope or meaning than the marked up information if the marked up report does not contain another disclosure that fully or partially corresponds to the respective taxonomy element. For example, an issuer which discloses in its statement of cash flows an item that represents cash outflows relating to the purchase of property, plant and equipment and intangibles other than goodwill can use the taxonomy element 'purchase of property, plant and equipment, intangible assets other than goodwill, investment property and other non-current assets' to mark up the disclosure, even though the cash outflows do not relate to investment property or other non-current assets. This however is only appropriate if the issuer does not disclose in a separate item in the statement of cash flows cash outflows relating to the purchase of investment property or other non-current assets.

As stated above, the field test exercise enabled the verification of feedback received from various parties. For instance, several stakeholders provided their feedback on the planned use of the calculation linkbase, where they negated the need for including this component in the extension taxonomy. From the field test experience it is evident that the use of the calculation linkbase brings enormous benefit for data comparability, forcing issuers to tag numbers with the appropriate sign as a positive or negative figure, based on the balance attribute value (credit/debit) declared on the item's definition.

Additionally, experience gathered through collaboration with issuers on practical tagging of their IFRS consolidated financial statements resulted in collection of a set of frequently asked questions and tips and hints, some of which will be documented and provided as another source of guidance. The following is a short extract from this list:

- The objective of finding the appropriate line item is to find the best fit that will allow readers of financial statements to find and compare appropriate information.
- The structure of taxonomy is organised in a way that should help entities to find items but it is not a required structure. Consequently, entities are required to look through the whole taxonomy to find the appropriate line item.
- When finding an appropriate line item, an entity should not look for the one that best matches the name in the financial statement but rather the one that best captures the accounting meaning of that line item. In order to do that, entities should read the documentation label that provides more detailed description of the line item and consider the references to the IFRSs. However, this has the limitation that common practise elements in the IFRS Taxonomy are line items not defined in IFRS, but rather are included in taxonomy as line items that often occurs in financial statements, therefore there normally the documentation label does not provide a detailed description.

- The taxonomy includes line items that reflect two possible ways of presentation of information in the statement of financial position: one is by liquidity, the other one is by current and non-current split. As a consequence, the line items in the latter one will often include items with information about whether this is current or non-current part, for example current inventories. Some items could be only current or non-current and those items will not include this specification, for example deferred tax. It might be simpler to find line items needed by looking through the appropriate structure in taxonomy.
- Filtering/searching for positions in the taxonomy comes in handy but when searching and filtering, the words that are assumed to be less frequently used in the taxonomy should be used (e.g. when searching for „biological assets", enter „biological" rather than „assets");
- If no exact match is found in the taxonomy, the nearest corresponding more generic item (e.g. „loans and advances" in case of „loans and advances to banks of one month or less") should be searched.

These guidance materials shall also include a section explaining double tagging of the same value in cases when certain classification does not apply, e.g. Profit (loss) = Profit (loss) from continuing operations in case Profit (loss) from discontinued operations does not exist.

5 Summary

The field test exercise has proven that it is possible to apply the proposed ESEF specification in practice to tag IFRS consolidated financial statements. This is despite the limited time that issuers and software vendors were provided to prepare for the exercise. The lessons learned during the tests allowed to include improvements in the ESEF taxonomy and filing rules in order to make them more comprehensive and comprehensible.

It is expected that the quality of tagging in terms of selection of ESEF taxonomy concepts or correctness of anchoring will improve when more time and guidance is allocated to perform this task. Similarly, the technical quality of extension taxonomies and more user friendly formatting of iXBRL reports are possible to be achieved provided that enough time is allocated for development of the software solutions compliant with ESEF specifications and preparing of reports layout in tools.

7 Annex 2 – Answers to survey

1. How satisfied were you with the field test exercise? *[(Not very) - 5 (Very)]*

2. How would you rate your understanding of the ESEF requirements BEFORE the field test exercise? *[1 (Low) - 5 (High)]*

3. How would you rate your understanding of the ESEF requirements AFTER the field test exercise? *[1 (Low) - 5 (High)]*

4. How would you rate the level of complexity of the following tasks that were carried out in the course of the preparation of the XBRL instance document:

a) Mapping of financial statement positions against ESEF taxonomy concepts *[1 (Low) - 5 (High)]*

b) Identifying a closest match in the ESEF taxonomy in case no base taxonomy item directly corresponded to a tagged disclosure *[1 (Low) - 5 (High)]*

c) Creation of issuer specific extension elements (including attributes such as instant/duration, credit/debit, etc) *[1 (Low) - 5 (High)]*

d) Defining presentation relationships reflecting the structure of a financial statement *[1 (Low) - 5 (High)]*

e) Creation of calculations to define arithmetical relationships *[1 (Low) - 5 (High)]*

f) Tagging of financial statement by marking up numbers in primary financial statements or sections of notes with block tags *[1 (Low) - 5 (High)]*

5. If you found the process complex, please briefly explain your judgement

- The complexity of tagging is highly dependent on the desired correctness of the outcome. It is highly complex to create a IXBRL-file which is correct and fulfills the requirements both in form and particularly in content. As you highlighted in your preparatory webinar "Mind that labels my match but not to the concept application" by noting that is necessary to consider the documentation label and disclosure references. In practice that is an important matter which makes correct tagging very

complex and also very time-consuming. Because that means on the one hand you have to analyze in detail the content and application of IFRS in connection with the company-specific financial statement. On the other hand you have to understand the content of the taxonomy. Documentation labels or references to IFRS here offer insufficient support, because these explanations are often poor or generic. It is predictable that the questions of correctness will raise further discussions with authorities and auditors. That the preparation of an iXBRL-file is complex was also quite evident from the workshop in Paris. Although the preparation of the IXBRL-file was supported by designated XBRL-experts, the preparation apparently could not be completed.

- More banking sector specific elements are needed in order to avoid the use of more generic elements or the creation of custom elements.
- The tool is not user-friendly. We had spent lot of time tagging manually financial statements that should be in a way automatized
- With a step-by-step manual with images or instruction video everyone should be able to handle it.
- The creation of some specific extension elements can be not easy, for example in our case, new columns for fair value adjustments in the statement of profit or loss.
- The biggest complexity is to align principle based taxonomy with concrete application from preparers side, which, in our case is additionally impacted by local regulator's mandatory schemes.

6. How much time (in hours) did you spend preparing (studying distributed materials, familiarizing with ESEF taxonomy) for the field test exercise?
7. How much time (in hours) did it take you to initially map your financial statements against the ESEF taxonomy?
477

8. How much time did it take you on average to find and identify a closest match in the ESEF taxonomy in case no base taxonomy item directly corresponded to a tagged disclosure (please provide average time in minutes per disclosure)?

- Answer related to question 7 and 8: Our study of XBRL and IFRS taxonomy started already in 2010, when we started to prepare for the SEC's XBRL requirements. We spend already several months on analysis, clarifications and mapping. It takes several hours to find and identify a closest match. Please see the response to question 5.
- sorry, I do not remember, it is almost 3 months, since I have done the exercise

9. How would you rate the effort required to map these components:

a) Statement of financial position *[1 (Low) - 5 (High)]*

b) Income statement / Statement of other comprehensive income *[1 (Low) - 5 (High)]*

c) Cash flows statement *[1 (Low) - 5 (High)]*
d) Statement of changes in equity *[1 (Low) - 5 (High)]*
e) Block tagging of notes and tagging mandatory concepts if present in a report *[1 (Low) - 5 (High)]*
10. How would you rate the organisation of the ESEF taxonomy in terms of ease of searching and browsing of its content? *[1 (Difficult) - 5 (Easy)]*

11. What would you change/add to simplify browsing and searching in ESEF taxonomy easier?

- I would add some small manual for better understanding of the logic
- Some very simple issues other more complicated.
- It is probably more a question of the XBRL software a company will use. Search functions should be as flexible as possible and allow users to look e.g. for terms in

standard-, documentation- or total-labels, IFRS standards, type of concept, mandatory concepts and changed or deleted concepts

- The analysis of primary financial statements is in at least two different section. This is time consuming since the preparer has to search the elements at least in two different sections. Additionally, the items should be classified in groups (like the US GAAP taxonomy).
- Data base is there and good. You should develop a tool with visualization improvment.
- I find it easy when browsed in excel so that I can sort data.
- It would be much easier if each element in taxonomy has the reference to the appropriate statement.
- Sometimes to find the right match is not easy, because you have to search in different places (statements, but also in the notes, etc).
- I would appreciate special ESEF taxonomy only for banks, as there are many items that differ from non-financial institutions. I would also lower the number of levels where the terms can be found (e.g. I was looking for the term at the level of Statement of financial position and also in the classification of the assets and the notes, i.e. at 3 different places.
- not sure, we guess with experience it gets easier, however it'd be challenging to document some mapping choices for future reviews and maintenance.
- Avoiding of (seemingly) multiple entries for one topic

12. How would you rate ESEF taxonomy completeness in terms of coverage of standard tags to be applied in reports? *[1 (Incomplete) - 5 (Complete)]*

13. How do you rate the software tool used for the workshops in terms of:

a) User friendliness *[1 (Low) - 5 (High)]*
b) Reliability *[1 (Low) - 5 (High)]*

c) Facilitating the process of defining taxonomy extension and tagging *[1 (Low) - 5 (High)]*

14. What would you improve in the tools provided?

- Very important is user friendly interface and very good software testing before end users are given access.
- Our testing group was able to see both software's that were proposed as working tools and my personal opinion is that the software that we were using was more user friendly.
- Yes, I think our tools was very faulty

482

- Tools should be self-explanatory. Software should be programmed in a form that requires users to understand or know as little as possible in terms of iXBRL technical aspects.
- The software should improve the search function. The search results should change from alphabetical order to relevance order. The creation of calculations are not user friendly since the user should recreate the structure again.
- Automation ==> The tool should scan the document and propose a prematch taxonomy to be confirmed by the user. Visualization ==> Limit the number of windows to fill in, facilitate the saving, give an output insight to the user.
- I would enhance intuitiveness of work by sorting the acts needed to do and placing corresponding buttons somewhere together. Without a manual nobody would develop logical steps how to proceed (turn xbrl on, click here, click there, activate this and that...), maybe colouring important icons with the same colour.
- It should be much faster with downloading data option (once entered).
- We had some errors in the process of recovering the previously saved information. The interface could be more user friendly.
- perhaps documentation and audit trial for future reviews
- Less manual input but upload possibilities instead
- I was pleasantly surprised about tool, compared to my previous experience with them. To the software provider I can strongly recommend in stronger customer support by consultants who have expertise in this type of XBRL requirements

15. What were your key take aways from the test field exercise?

- A very good understanding of the taxonomy prior to the mapping exercise is a must to avoid mapping errors. When I will have to perform the "real" mapping exercise in view of the first publication, I will first study the taxonomy itself to make sure I understand its structure and avoid mapping errors.
- The mapping exercise certainly represents an opportunity to move towards simpler financial statements, so as to make the mapping easier and avoid possible sources of confusion for final users. No decision was taken by the Group at this stage on this matter. However simplifying external financial statements will involve many stakeholders internally (consolidation department, financial communication) and externally (shareholders, analysts).
- Much better understanding of ESEF, its requirements, purpose and logic. Training and personal instruction.
- Compliance for MSR/MSSF.
- The obligation to report in a harmonized ESEF has been justified in recital (26) of the EU Transparency Directive, according to which it "would be very beneficial for issuers, investors and competent authorities, since it would make reporting easier and facilitate accessibility, analysis and comparability of annual financial reports". We strongly doubt that iXBRL reporting would meet these objectives, particularly regarding the criteria "easier". Firstly, the field test demonstrated that iXBRL reporting demands additional technological competence from issuers that is not yet widely available. Secondly, if iXBRL was chosen the ESEF issuers would not only have to follow the permanent amendments to the International Financial Reporting Standards but also the corresponding changes of the XBRL taxonomies. The experience in the USA has shown evidence of this complexity, where mandatory XBRL reporting

required extensive EDGAR filer manuals. As such, the field test was not a realistic simulation regarding an expected application of the ESEF. An initial preparation of a tagging in one and a half day in Paris was possible only with the very helpful support of designated iXBRL experts or consultants. In practice – with no such support - it will take significantly more time to answer questions or to solve technical iXBRL problems. Generally we wonder if the field test was considering entirely the criteria mentioned in the EU Transparency Directive, because it was not tested for the benefits or expectations of the investors and competent authorities.

- Familiarize with the ESEF taxonomy, Familiarize with a new software (different than the one we already use for the US GAAP), Nerworking with ESEF members
- This is mandatory. One goal is to create visibility for companies and attract investors. One other goal is to get data across companies more comparable.
- It was very nice to see, it worked without problems, well prepared from your IT. Big wow for that. Now I see it won't be that hard. But prepare hot-line for questions when the time comes;)
- We hope that after this exercise it would be easier to implement new requirements.
- The unconcern of knowing that specific extensions have been created and it cover the needs of our company.
- The convenience of promoting an internal Project as soon as possible.
- There are many question marks, e.g. Who will be responsible for the assurance (auditors?), Shall the financial statements be in the xbrl format in both languages (national, English?), Shall the financial statements in the xbrl format be disclosed together with the annual report or with some delay?,…
- mainly an estimation of effort needed on target, the complexity of exercise and an insight on tools available
- In general we are close to the standard structure. However in detail it sometimes proved tricky to do the mapping
- 1/ I got a chance to work with a software to see how the tagging works, 2/ it was a chance to better familiarise myself with the whole xbrl/esef concept
