

# Lenovo B460e

User Guide v1.0

Read the safety notices and important tips in the included manuals before using your computer.

## Notes

- Before using the product, be sure to read *Lenovo Safety and General Information Guide* first.
- Some instructions in this guide may assume that you are using Windows® 7. If you are using other Windows operating system, some operations may be slightly different. If you are using other operating systems, some operations may not apply to you.
- The features described in this guide are common to most models. Some features may not be available on your computer and/or your computer may include features that are not described in this user guide.
- The illustrations in this manual may differ from the actual product. Please refer to the actual product.

## Regulatory Notice

- To refer to it, go to <http://consumersupport.lenovo.com/> and click **User guides and manuals**.

**First Edition (July 2011)**

# Chapter 1. Getting to know your computer

## ■ ■ Top view

**Note:** The illustrations in this manual may differ from the actual product. Please refer to the actual product.

### ⓘ Attention:

- Do NOT open the display panel beyond 130 degrees. When closing the display panel, be careful NOT to leave pens or any other objects in between the display panel and the keyboard. Otherwise, the display panel may be damaged.

## Chapter 1. Getting to know your computer

- 1 Integrated camera** Use the camera for video communication.
- 2 Wireless module antennas** The built-in antennas ensure optimal reception of wireless radio.
- 3 Computer display** The computer display with LED backlight provides brilliant visual output.
- 4 Speakers** The stereo speakers provide rich and powerful sound.
- 5 Power button** Press this button to turn on the computer.
- 6 OneKey Rescue system button** Press this button to start OneKey Rescue system when the computer is powered off.
- 7 System status indicators** For details, see “System status indicators” on page 15.
- 8 Built-in microphone** The built-in microphone (with noise reduction) can be used for video conferencing, voice narration, or simple audio recordings.
- 9 Touchpad** The touchpad functions as a conventional mouse.

**Note:** For details, see “OneKey Rescue system” on page 19.

**Note:** For details, see “Using the touchpad” on page 10.

## ■ ■ Left-side view

**1 Kensington slot** Attach a security lock (not supplied) here.

**Note:** For details, see “Attaching a security lock (not supplied)” on page 16.

**2 VGA port** Connects to external display devices.

**3 Fan louvers** Dissipate internal heat.

**Note:** Make sure that none of the fan louvers are blocked or else overheating of the computer may occur.

**4 RJ-45 port** This port connects the computer to an Ethernet network.

**Note:** For details, see “Wired connection” on page 17.

**5 USB port** Connects to USB devices.

**Note:** For details, see “Connecting USB devices” on page 13.

**6 Microphone jack** Connects to external microphones.

**7 Headphone jack** Connects to external headphones.

ⓘ **Attention:**

- Listening to music at high volume over extended periods of time may damage your hearing.

## ■ ■ Right-side view

---

**1 Optical drive** Reads/Burns optical disks.

**2 USB port** Connects to USB devices.

**Note:** For details, see “Connecting USB devices” on page 13.

**3 AC power adapter jack** Connect the AC adapter here.

**Note:** For details, see “Using AC adapter and battery” on page 9.

## ■ ■ Front view

---

- 1 Integrated wireless device switch** Use this switch to turn on/off the wireless radio of all wireless devices on your computer.
- 2 Fan louvers** Dissipate internal heat.

**Note:** Make sure that none of the fan louvers are blocked or else overheating of the computer may occur.

## ■ ■ Bottom view

- 1 Battery latch - manual** The manual battery latch is used to keep the battery pack secured in place.
- 2 Battery pack** For details, see “Using AC adapter and battery” on page 9.
- 3 Battery latch - spring loaded** The spring-loaded battery latch keeps the battery pack secured in place.
- 4 Hard disk drive (HDD) / Memory / Mini PCI Express Card slot compartment**

# Chapter 2. Learning the basics

## ■ ■ First use

---

### ■ Reading the manuals

Read the supplied manuals before using your computer.

### ■ Connecting to the power

The supplied battery pack is not fully charged at purchase.

To charge the battery and begin using your computer, insert the battery pack and connect the computer to an electrical outlet. The battery is automatically charged while the computer is running on AC power.

#### **Installing the battery pack**

Refer to the supplied *Setup Poster* to install the battery pack.

#### **Connecting the computer to an electrical outlet**

- ① Connect the power cord to the AC adapter.
- ② Connect the AC adapter to the AC power adapter jack of the computer firmly.
- ③ Plug the power cord into an electrical outlet.

### ■ Turning on the computer

Press the power button to turn on the computer.

### ■ Configuring the operating system

You may need to configure the operating system when it is first used. The configuration process may include the procedures below.

- Accepting the end user license agreement
- Configuring the Internet connection
- Registering the operating system
- Creating a user account

## Chapter 2. Learning the basics

### ■ Putting your computer into sleep state or shutting it down

When you finish working with your computer, you can put it into sleep state or shut it down.

#### Putting your computer into sleep state

If you will be away from your computer for only a short time, put the computer into sleep state. When the computer is in sleep state, you can quickly wake it to resume use, and bypass the startup process.

To put the computer into sleep state, do one of the following.

- Click  and select **Sleep** from the Start menu.
- Press **Fn + F1**.

**Note:** Wait until the power indicator light starts blinking (indicating that the computer is in sleep state) before you move your computer. Moving your computer while the hard disk is spinning can damage the hard disk, causing loss of data.

To wake the computer, do one of the following.

- Press the power button.
- Press any key on the keyboard.

#### Shutting down your computer

If you are not going to use your computer for a day or two, shut it down.

To shut down your computer, click  and select **Shut down** from the Start menu.

## ■ ■ Using AC adapter and battery

---

### ■ Checking battery status

You can determine the percentage of battery power remaining by checking the battery icon in the notification area.

**Note:** As each computer user has different habits and needs, it is difficult to predict how long a battery charge will last. There are two main factors:

- The amount of energy stored in the battery when you commence work.
- The way you use your computer: for example, how often you access the hard disk drive and how bright you make the computer display.

### ■ Charging the battery

When you find that the battery power is low, you need to charge the battery or replace it with a fully charged one.

You need to charge the battery in any of the following situations:

- When you purchase a new battery
- If the battery status indicator starts blinking
- If the battery has not been used for a long time

**Notes:**

- You are advised to insert the battery pack when using your computer to prevent small particles from entering the inside of your computer.
- To increase the life of the battery pack, the computer does not start recharging the battery immediately after it drops from fully charged.
- Charge the battery at a temperature between 50 °F and 86 °F (10 °C-30 °C).
- Full charge or discharge is not required.

### ■ Removing the battery pack

If you are not going to use the computer for an extended period of time, or if you need to send your computer to Lenovo for service, etc. remove the battery pack from the computer. Before removing the battery pack, make sure the computer has been shut down.

### ■ Handling the battery

If the rechargeable battery pack is replaced with an incorrect type, there may be danger of an explosion. The battery pack contains a small amount of harmful substances. To avoid possible injury and detriment to the environment, pay attention to the following points:

- Replace only with a battery of the type recommended by Lenovo.
- Keep the battery pack away from fire.
- Do not expose the battery pack to water or rain.
- Do not attempt to disassemble the battery pack.
- Do not short-circuit the battery pack.
- Keep the battery pack away from children.
- Do not put the battery pack in trash that is disposed of in landfills. When disposing of the battery, comply with local ordinances or regulations and your company's safety standards.

## ■ ■ Using the touchpad

**1 Touchpad**

To move the cursor on the screen, slide your fingertip over the pad in the direction in which you want the cursor to move.

**2 Left click button**

The function corresponds to that of the left mouse button on a conventional mouse.

**3 Right click button**

The function corresponds to that of the right mouse button on a conventional mouse.

**Notes:**

- You can enable/disable the touchpad using **Fn + F6**.
- When the touchpad indicator is lit, the touchpad is disabled.

## ■ ■ Using the keyboard

Your computer has a numeric keypad and function keys incorporated in its standard keyboard.

### ■ Numeric keypad

The keyboard has keys that, when enabled, work as a 10-key numeric keypad. To enable or disable the numeric keypad, press **Fn + F8**.

**Note:** The Num lock indicator will light on if the numeric keypad is enabled.

### ■ Function key combinations

Through the use of the function keys, you can change operational features instantly. To use this function, press and hold **Fn 1**; then press one of the function keys **2**.

## Chapter 2. Learning the basics

The following describes the features of each function key.

|                    |   |
|--------------------|---|
| <b>Fn + Esc:</b>   | Turn on/off the integrated camera.                                    |
| <b>Fn + F1:</b>    | Enter sleep mode.   |
| <b>Fn + F2:</b>    | Turn on/off the backlight of the LCD screen.                          |
| <b>Fn + F3:</b>    | Open the interface for switching the display mode.                    |
| <b>Fn + F4:</b>    | Open the interface for display resolution settings.                   |
| <b>Fn + F5:</b>    | Open the interface for integrated wireless devices settings (on/off). |
| <b>Fn + F6:</b>    | Enable/Disable the touchpad.  |
| <b>Fn + F8:</b>    | Enable/Disable the numeric keypad.                                    |
| <b>Fn + F9:</b>    | Activate the pause function.  |
| <b>Fn + F10:</b>   | Activate the break function.  |
| <b>Fn + F11:</b>   | Enable/Disable the scroll lock.                                       |
| <b>Fn + F12:</b>   | Activate the insert function.   |
| <b>Fn + PrtSc:</b> | Activate the system request.  |
| <b>Fn + ↑ / ↓:</b> | Increase/Decrease display brightness.                                 |
| <b>Fn + → / ←:</b> | Increase/Decrease sound volume.                                       |

## ■ ■ Connecting external devices

Your computer has a wide range of built-in features and connection capabilities.

### ■ Connecting USB devices

You can connect a USB device to your computer by inserting its USB plug (Type A) into the USB port on your computer.

| Model | Number of USB port |
|-------|--------------------|
| B460e | 3                  |

The first time you plug a USB device into a particular USB port on your computer, Windows automatically installs a driver for that device. After the driver is installed, you can disconnect and reconnect the device without performing any additional steps.

**Note:** Typically, Windows detects a new device after connecting it, and then installs the driver automatically. However, some devices may require you to install the driver before connecting. Check the documentation provided by the device's manufacturer before connecting the device.

Before disconnecting a USB storage device, make sure your computer has finished transferring data by that device. Click the **Safely Remove Hardware** icon in the notification area of Windows to remove the device before disconnecting.

**Note:** If your USB device uses a power cord, connect the device to a power source before connecting it. Otherwise, the device may not be recognized.

## ■ ■ Special keys and buttons

---

### ■ OneKey Rescue system button

- When the computer is powered-off, press this button to start Lenovo OneKey Rescue system.
- In Windows operating system, press this button to start Lenovo OneKey Recovery system.

**Note:** For details, see “OneKey Rescue system” on page 19.

## ■ ■ System status indicators

These indicators inform you of the computer status.

- 1** Hard disk drive indicator 
- 2** Scroll lock indicator 
- 3** Caps lock indicator 
- 4** Power status indicator 
- 5** Battery status indicator 
- 6** Wireless communication indicator 
- 7** Touchpad indicator 
- 8** Num lock indicator 

### ■ ■ Securing your computer

---

This section provides information about how to help protect your computer from theft and unauthorized use.

#### ■ Attaching a security lock (not supplied)

You can attach a security lock to your computer to help prevent it from being removed without your permission. For details on installing the security lock, please refer to the instructions shipped with the security lock that you have purchased.

Refer to the “Left-side view” on page 3 for the location of the Kensington slot.

**Notes:**

- Before purchasing any security product, verify that it is compatible with this type of security keyhole.
- You are responsible for evaluating, selecting, and implementing the locking devices and security features. Lenovo offers no comment judgement or warranty regarding the function, quality or performance of locking devices and security features.

#### ■ Using passwords

Using passwords helps prevent your computer from being used by others. Once you set a password and enable it, a prompt appears on the screen each time you power on the computer. Enter your password at the prompt. The computer cannot be used unless you enter the correct password.

**Note:** This password can be from one to seven alphanumeric characters in any combination.

For details about how to set the password, see the Help to the right of the screen in BIOS setup utility.

**Note:** To enter BIOS setup utility, press **F2** when the Lenovo logo appears on the screen while the computer is starting up.

# Chapter 3. Connecting to the Internet

As a global network, the Internet connects computers worldwide, providing services such as e-mailing, information searching, electronic commerce, Web browsing and entertainment.

You can connect the computer to the Internet in the following ways:

**Wired connection:** use physical wiring to connect.

**Wireless network technology:** connect without wiring.

## ■ ■ Wired connection

Wired connections are a reliable and safe way to connect the computer to the Internet.

|       |   |
|-------|---|
| Cable | Cable Internet services use a cable modem connected to the residential cable TV line.   |
| DSL   | DSL is a family of related technologies that bring high-speed network access to homes and small businesses over ordinary telephone lines. |

## ■ Hardware connection

### Cable

### DSL

\* Not supplied.

**Note:** The above diagrams are for reference only. Actual connection method may vary.

## ■ Software configuration

Consult your Internet Service Provider (ISP) for details on how to configure your computer.

### ■ ■ Wireless connection

Wireless connections provide mobile access to the Internet, allowing you to stay online anywhere the wireless signal covers.

Divided by the signal scales, wireless connection to the Internet can be built based on the following standards.

|       |  |
|-------|--|
| Wi-Fi | Wi-Fi networks cover a small physical area, like a home, office, or small group of buildings. An access point is necessary for the connection. |
|-------|--|

**Note:** Your computer may not support all wireless connection methods.

### ■ Using Wi-Fi

#### Enabling wireless connection

To enable wireless communications, do the following:

- 1 Slide the integrated wireless device switch from  to .
- 2 Press **Fn + F5** to make configuration.

#### Hardware connection

\* Not supplied

#### Software configuration

Consult your Internet Service Provider (ISP) and search Windows Help and Support Center for details on how to configure your computer.

# Chapter 4. OneKey Rescue system

## ■ ■ OneKey Rescue system

---

### ■ Introduction

The Lenovo OneKey Rescue system is an easy-to-use program that can be used to back up the data on your system partition (C drive) for easy restore when required. You can run Lenovo OneKey Recovery under the Windows operating system, and the OneKey Rescue system without starting the Windows operating system.

#### ⦿ **Attention:**

In order to utilize the features of the OneKey Rescue system, your hard disk already includes a hidden partition by default to store the system image file and OneKey Rescue system program files. This default partition is hidden for security reasons and is the reason the available disk space is less than it claims. The exact available hard disk space depends on the file size of the mirror image file (based on the size of operating system and preinstalled software).

### ■ Using Lenovo OneKey Recovery (within Windows operating system)

In Windows operating system, double click the OneKey Recovery system Icon on the desktop to launch Lenovo OneKey Recovery.

Within the program, you can back up the system partition on the hard disk drive, other storage devices, or by creating recovery discs.

#### **Notes:**

- The backup process and creation of recovery discs may take some time, connect the AC adapter and battery pack to your computer.
- After the recovery discs are burned, please number them so that you can use them in the correct order.
- Computers without an integrated optical drive support the creation of recovery discs; however an appropriate external optical drive is needed to physically create the recovery discs.

**For more instructions, see the Help file of Lenovo OneKey Recovery.**

### ■ Using Lenovo OneKey Rescue system (without Windows operating system)

In the event that the operating system cannot be loaded, follow the steps below to access OneKey Rescue system.

- Shut down your computer.
- Press the  key to launch OneKey Rescue system.

Within the program, you can choose to restore your system partition to the original factory status, or to a previously generated backup.

**Note:** The recovery process is irreversible. Make sure to back up any critical data before using the recovery feature.

## Chapter 4. OneKey Rescue system

### ■ Creating a recovery disc(s)

Your computer does not ship with a recovery disc. You can use Lenovo OneKey Recovery system to create a recovery disc(s), which can be used to start and restore your computer in case of a system failure.

To create a recovery disc(s):

- Insert a recordable disc into the optical drive on your computer.

**Note:** If your computer does not come with an integrated optical drive or if the integrated optical drive does not support disc creating, connect an appropriate external optical drive to your computer.

- In Windows, press the OneKey Rescue system button to launch Lenovo OneKey Recovery system.

- On the main screen, click **Create Recovery Disc**.
- Choose the type of recovery disc(s). You can create three types of recovery disc(s): recovery disc(s) with existing backup image, recovery disc(s) from the current system partition, and factory default recovery disc(s). Select the type of recovery disc you want to create and follow the on-screen instructions.
- Insert additional recordable disc(s) when prompted.

**Notes:**

- The estimated number of discs needed will be displayed before the process of creating the recovery disc(s) begins. To minimize the number of discs needed, use recordable DVDs as the media. Also make sure your optical drive is compatible with the disc intended for use.
- After recovery disc creation, number the discs appropriately for use in their correct order. The first disc created will be used to start the computer in the case of a system failure.

# Chapter 5. Troubleshooting

## ■ ■ Frequently asked questions

---

This section lists frequently asked questions and tells where you can find detailed answers. For details about each publication included in the package with your computer, see *Lenovo B460e Setup Poster*.

### **What safety precautions should I follow when using my computer?**

See "Chapter 1. Important safety information" of *Lenovo Safety and General Information Guide*.

### **How can I prevent problems with my computer?**

See "Chapter 2. Use and care Information" of *Lenovo Safety and General Information Guide*.

### **What are the main hardware features of my computer?**

More information can be found in Chapter 1 and 2.

### **Where can I find the detailed specifications for my computer?**

See <http://consumersupport.lenovo.com>.

### **I need to upgrade a device or I need to replace one of the following: the hard disk drive, memory, or the keyboard.**

See "Appendix. CRU instructions" on page 27 of this guide.

### **Where are the recovery discs?**

Your computer did not come with a recovery disc. For an explanation of the alternative recovery methods offered by Lenovo, see "Chapter 4. OneKey Rescue system" on page 19.

### **How can I contact the customer support center?**

See "Chapter 3. Getting help and service" of *Lenovo Safety and General Information Guide*.

### **Where can I find warranty information?**

For the warranty applicable to your computer, including the warranty period and type of warranty service, see the *Lenovo limited warranty* flyer that came with your computer.

### **How can I install the device drivers?**

A compatible device driver is a requirement to ensure correct operation and performance of each component in your computer. If your computer is pre-installed with an operating system, Lenovo provides all drivers that you need in your hard disk.

### **What can I do if the backup process fails?**

If you can start the backup feature without a problem, but it fails during the backup process, please try the following steps:

- ❶ Close other applications, then restart the backup process.
- ❷ Check if the destination media is damaged, try to select another path and then try again.

## Chapter 5. Troubleshooting

### **When do I need to restore the system to the factory status?**

You can use this feature when your system fails or you need to re-install your operating system. This will restore your computer back to the initial status when you first booted up your computer after receiving it from the store. If there is critical data on your current partition, back it up before you run this recovery feature.

## ■ ■ Troubleshooting

If you do not find your problem here, see Chapter 2. The following section only describes problems that might negate the need to refer to the more comprehensive information in Chapter 2.

### Display problems

When I turn on the computer, nothing appears on the screen.

- If the screen is blank, make sure that:
  - The battery is installed correctly.
  - The AC adapter is connected to the computer and the power cord is plugged into a working electrical outlet.
  - The computer power is on. (Press the power button again for confirmation.)
  - The memory is installed correctly.
- If these items are properly set, and the screen remains blank, have the computer serviced.

When I turn on the computer, only a white cursor appears on a blank screen.

- Restore backed-up files to your Windows environment or the entire contents of your hard disk to the original factory contents using OneKey Recovery. If you still see only the cursor on the screen, have the computer serviced.

My screen goes blank while the computer is on.

- Your screen saver or power management may be enabled. Do one of the following to exit from the screen saver or to resume from sleep or hibernation mode:
  - Touch the touchpad.
  - Press any key on the keyboard.
  - Press the power button.
- Press **Fn + F2** to confirm whether the LCD screen has been turned off.

### A Password problem

I forgot my password.

- If you forget your user password, you must take your computer to a Lenovo authorized servicer or a marketing representative to have the password changed.
- If you forget your HDD password, a Lenovo authorized servicer cannot reset your password or recover data from the hard disk. You must take your computer to a Lenovo authorized servicer or a marketing representative to have the hard disk drive replaced. Proof of purchase is required, and a fee will be charged for parts and service.
- If you forget your supervisor password, a Lenovo authorized servicer cannot reset your password. You must take your computer to a Lenovo authorized servicer or a marketing representative to have the system board replaced. Proof of purchase is required, and a fee will be charged for parts and service.

### Keyboard problems

A number appears when you enter a letter.

- The numeric lock function is on. To disable it, press **Fn + F8**.

## Chapter 5. Troubleshooting

### Sleep or hibernation problems

The critical low-battery error message appears, and the computer immediately turns off.

- The battery power is getting low. Connect the AC adapter to the computer, or replace the battery with a fully charged one.

The computer enters sleep mode immediately after Power-on self-test (POST).

- Make sure that:
  - The battery is charged.
  - The operating temperature is within the acceptable range. See “Chapter 2. Use and care Information” of *Lenovo Safety and General Information Guide*.

**Note:** If the battery is charged and the temperature is within range, have the computer serviced.

The computer does not return from sleep mode and the computer does not work.

- If the computer does not return from sleep mode, it may have entered hibernation mode automatically because the battery is depleted. Check the power indicator.
- If your computer is in sleep mode, connect the AC adapter to the computer, then press any key or the power button.
- If your computer is in hibernation mode or power-off state, connect the AC adapter to the computer, then press the power button to resume operation.

**Note:** If the system still does not return from sleep mode, your system has stopped responding, and you cannot turn off the computer; reset the computer. Unsaved data may be lost. To reset the computer, press and hold the power button for 4 seconds or more. If the computer is still not reset, remove the AC adapter and the battery.

### Computer screen problems

The screen is blank.

- Do the following:
  - If you are using the AC adapter, or using the battery, and the battery status indicator is on, press **Fn + ↑** to make the screen brighter.
  - If the power indicator is in blinking, press the power button to resume from the sleep mode.
  - If the problem persists, follow the solution in the following problem “The screen is unreadable or distorted.”
  - Press **Fn + F2** to confirm whether the LCD screen has been turned off.

The screen is unreadable or distorted.

- Make sure that:
  - The display device driver is installed correctly.
  - The screen resolution and color quality are correctly set.
  - The monitor type is correct.

Incorrect characters appear on the screen.

- Did you install the operating system or application program correctly? If they are installed and configured correctly, have the computer serviced.

### Sound problems

No sound can be heard from the speaker even when the volume is turned up.

- Make sure that:
  - The Mute function is off.
  - The headphone jack is not used.
  - Speakers are selected as the playback device.

### Battery problems

Your computer shuts down before the battery status indicator shows empty.

-or-

Your computer operates after the battery status indicator shows empty.

The operating time for a fully charged battery is short.

The computer does not operate with a fully charged battery.

The battery does not charge.

- Discharge and recharge the battery.
- For details, see “Handling the battery” in Chapter 2.
- The surge protector in the battery might be active. Turn off the computer for one minute to reset the protector; then turn on the computer again.
- For details, see “Handling the battery” in Chapter 2.

### A hard disk drive problem

The hard disk drive does not work.

- In the **Boot** menu in BIOS setup utility, make sure that the hard disk drive is included in the **Boot priority order** correctly.

### A startup problem

The Microsoft® Windows operating system does not start.

- Use the OneKey Rescue system to help solve or identify your problem. For details about OneKey Rescue system, see “Chapter 4. OneKey Rescue system” on page 19.

### OneKey Rescue system problems

Backup cannot be made.

Fail to restore system partition to factory default.

- You are not currently using a Windows operating system.
- There is not enough space to store the backed up data. You will need to free more hard disk space on your system partition (C drive).
- The system partition, such as the partition size or the drive capacity of C, has been modified.

## Chapter 5. Troubleshooting

### Other problems

- Your computer does not respond.
- To turn off your computer, press and hold the power button for 4 seconds or more. If the computer still does not respond, remove the AC adapter and the battery.
  - Your computer might lock when it enters sleep mode during a communication operation. Disable the sleep timer when you are working on the network.
- The computer does not start from a device you want.
- See the **Boot** menu of the BIOS setup utility. Make sure that the **Boot priority order** in the BIOS setup utility is set so that the computer starts from the device you want.
  - Also make sure that the device from which the computer starts is enabled. In the **Boot** menu in the BIOS setup utility, make sure that the device is included in the **Boot priority order** list.
  - Press **F12** when the Lenovo logo appears on the screen while the computer is starting up to select the device you want the computer starts from.
- The connected external device does not work.
- Do not connect or disconnect any external device cables other than USB while the computer power is on; otherwise, you might damage your computer.
  - When using a high power consumption external devices such as an external USB optical disk drive, use external device power adapter. Otherwise, the device may not be recognized, or system shut down may result.

# Appendix. CRU instructions

## ■ ■ Replacing the battery

**Note:** Use only the battery provided by Lenovo. Any other battery could ignite or explode.

To replace the battery, do the following:

- 1 Turn off the computer, or enter hibernation mode. Disconnect the AC adapter and all cables from the computer.
- 2 Close the computer display, and turn the computer over.
- 3 Unlock the manual battery latch **1**. Holding the spring-loaded battery latch in the unlocked position **2**, remove the battery pack in the direction shown by the arrow **3**.

- 4 Install a fully charged battery.
- 5 Slide the manual battery latch to the locked position.
- 6 Turn the computer over again. Connect the AC adapter and the cables to the computer again.

### ■ ■ Replacing the hard disk drive

---

You can increase the storage capacity of your computer by replacing the hard disk drive with one of greater capacity. You can purchase a new hard disk drive from your reseller or Lenovo marketing representative.

**Notes:**

- Replace the hard disk drive only if you upgrade it or have it repaired. The connectors and bay of the hard disk drive were not designed for frequent changes, or drive swapping.
- The preinstalled software are not included on an optional hard disk drive.

#### **Handling a hard disk drive**

- Do not drop the drive or subject it to physical shocks. Put the drive on a material, such as soft cloth, that absorbs the physical shock.
- Do not apply pressure to the cover of the drive.
- Do not touch the connector.

The drive is very sensitive. Incorrect handling can cause damage and permanent loss of data on the hard disk. Before removing the hard disk drive, make a backup copy of all the information on the hard disk, and then turn the computer off. Never remove the drive while the system is operating, in sleep mode, or in hibernation mode.

To replace the hard disk drive, do the following:

- ❶ Turn off the computer; then disconnect the AC adapter and all cables from the computer.
- ❷ Close the computer display, and then turn the computer over.
- ❸ Remove the battery pack.
- ❹ Remove the Hard disk drive (HDD)/Memory/Mini PCI Express Card slot compartment cover.
  - a. Loosen the screws that secure the compartment cover ❶.
  - b. Remove the compartment cover ❷.

## Appendix. CRU instructions

- 5 Remove the frame fixing screws 3.

- 6 Pull the tab in the direction shown by arrow 4.

- 7 Take out the hard disk drive secured in a metal frame **5**.

- 8 Remove the screws and detach the metal frame from the hard disk drive.
- 9 Attach the metal frame to a new hard disk drive and tighten the screws.
- 10 Put the hard disk drive gently into the hard disk drive bay with the tab facing upwards and the connectors facing each other; then push it firmly into space.
- 11 Reinstall the frame fixing screws.
- 12 Reinstall the compartment cover and tighten the screws.
- 13 Reinstall the battery pack.
- 14 Turn the computer over again. Connect the AC adapter and the cables to the computer again.

## ■ ■ Replacing memory

You can increase the amount of memory in your computer by installing a double-data-rate three synchronous dynamic random access memory (DDR3 SDRAM)-available as an option-in the memory slot of your computer. DDR3 SDRAMs are available in various capacities.

**Note:** Use only the memory types supported by your computer. If you incorrectly install optional memory, or install an unsupported memory type, a warning beep will sound when you try to start the computer.

To install a DDR3 SDRAM, do the following:

- ❶ Touch a metal table or a grounded metal object to reduce any static electricity in your body, which could damage the DDR3 SDRAM. Do not touch the contact edge of the DDR3 SDRAM.
- ❷ Turn off the computer. Disconnect the AC adapter and all cables from the computer.
- ❸ Close the computer display, and turn the computer over.
- ❹ Remove the battery pack.
- ❺ Remove the Hard disk drive (HDD)/Memory/Mini PCI Express Card slot compartment cover.
  - a. Loosen the screws that secure the compartment cover ❶ .
  - b. Remove the compartment cover ❷ .

- 6 If two DDR3 SDRAMs are already installed in the memory slot, remove one of them to make room for the new one by pressing out on the latches on both edges of the socket at the same time. Be sure to save the old DDR3 SDRAM for future use.

- 7 Align the notch of the DDR3 SDRAM with the protrusion of the socket and gently insert the DDR3 SDRAM into the socket at a 30-45° angle.
- 8 Push the DDR3 SDRAM inward toward the socket until the latches on both edges of the socket are pushed into the closed position.

- 9 Reinstall the compartment cover and tighten the screws.
- 10 Reinstall the battery pack.
- 11 Turn the computer over again. Connect the AC adapter and the cables to the computer again.

## Appendix. CRU instructions

**Note:** If only one DDR3 SDRAM is used on the computer you are servicing, the card must be installed in SLOT-0 (**a**: lower slot), but not in SLOT-1 (**b**: upper slot).

To make sure that the DDR3 SDRAM is installed correctly, do as follows:

- 1 Turn the computer on.
- 2 Hold **F2** during startup. The BIOS setup utility screen opens. The **System Memory** item shows the total amount of memory installed in your computer.

## ■ ■ Removing the optical drive

To remove the optical drive, do the following:

- 1 Remove the screw shown in the illustration 1.
- 2 Gently pull the optical drive out 2.

The following table provides a list of CRUs (Customer Replaceable Units) for your computer, and informs you of where to find replacement instructions.

|                           | Setup Poster | User Guide |
|---------------------------|--------------|------------|
| AC adapter                | ○            |            |
| Power cord for AC adapter | ○            |            |
| Battery                   | ○            | ○          |
| Bottom access doors       |              | ○          |
| Hard disk drive           |              | ○          |
| Memory                    |              | ○          |
| Optical drive             |              | ○          |
