1. New firmware updater – TCP client / server connections increased to 128 - EtherNet/IP driver included - Update backplane FW via USB
2. New firmware 2.10.2.0 – Support of Siemens TCP/IP industrial Ethernet (S7 & S5) – New Cyclic function GUI against overlapping – S7 1200 device profile added – Direct access to module's 30K database (AOI) – Dynamic triggering of cyclic functions using AOI – Variable IO and Status Connection sizes.
3. New firmware 2.11.0.0 – Open TCP/IP parameters (interval and number of TCP re-try) – Cyclic Function (CF) refresh period up to 10ms – New diagnosis information added into the FC diagnosis tool (visucyc.exe) – Possibility to duplicate equipment with its associated CF.
4. New firmware 2.12.1.0 - added support for AOP when using AOI. Minor improvement and bug fixing.
5. New firmware 2.14.0.0 - added support for Flow Computer Management (4 bytes for the address to access 32-Bit Float Input Registers, 32-Bit Integer registers and 32-Bit float registers) & Split database for Server/Slave mode (2 databases (32K Words and 32K Bits) are split into areas for function codes (Discrete (FC2), Coils (FC1, FC5, FC15), Input Register (FC4), Holding Register (FC3, FC6, FC16). Discrete and Coils are mapped to bit database. Holding Registers and Input Registers are mapped to the word database)
6. Includes SlavePassThru AOI, Activate Deactivate Slave AOI.
New firmware 2.15.1.0 – added support Inter-Message delay at network and device level for Ethernet and Serial Communication and New mode to stop both Read and Write cyclic functions mapped to I/O area when in Program mode. Outputs hold last state.

1. Delivered with firmware V1.1.0.0
2. Delivered with firmware V1.3.3.0 - New feature available such as :
 - Added Slave PassThru AOI
 - Server split database
 - EDS files
 - Inter-Message Delay (Network and Device Level)
 - Disable /Enable Slaves via CIP messaging
 - Flow Computer support
 - SIEMENS Industrial Ethernet TCP/IP Protocol support (SST-ESR2-CPX-P/S).
