

Samsung HA59x Series

Leverage advanced and integrated hospitality technology for IP environments

Highlights

- Provide a superior guest visit and true multimedia experience with a stylish hospitality display
- Integrate guests' mobile devices into the in-room experience wirelessly with Soft AP and AllShare®
- Customize important hotel content using the brand new Samsung LYNK™ SINC 3.0 solution over an Internet Protocol (IP) network
- Cut costs and enhance security with Samsung LYNK™ Digital Rights Management (DRM) technology
- Operate multiple displays conveniently and easily by assigning up to ten different groups of displays to designated remote controllers
- Reduce operating expenses with energy-saving features
- Cut costs and enhance security with Samsung LYNK™ Digital Rights Management (DRM) technology

Create an enhanced in-room entertainment experience

Owners and managers of premium hotels want to provide the superior quality in-room experience that sophisticated travelers expect. Yet, the cost of IP-based equipment and interactive solutions can be prohibitive. In addition, many premium TVs on the market provide a varied selection of features, but include an interface that is difficult to use.

Samsung HA59x Series displays are integrated, high-performing TVs that include many desirable features and an interface designed for

ease of use. The displays contribute to a pleasant room ambiance and superior viewing experience because of their slim, streamlined design. With smart connectivity features, the screens offer myriad entertainment options for guests. Hotel staff members can customize the welcome menu with a straightforward interface. Additionally, hotels can stay on budget with affordable content-streaming options and other cost-saving features. HA59x can be used to enrich the guest experience by integrating the in-room TV with an IP environment. The solution is a technological initiator to an IP environment at a reasonable cost.

Figure 1. HA59x Series display contributes to a pleasant room ambiance and superior viewing experience with slim, streamlined design

Offer a superior hotel guest experience with a wide range of entertainment options

Integrate guests' mobile devices into the in-room experience wirelessly with Soft AP and AllShare

HA59x Series displays transform the guest experience by providing an in-room, multi-device entertainment hub with the following features:

AllShare

AllShare technology, powered by the Digital Living Network Alliance (DLNA), gives guests the flexibility to play personal content through a wireless connection on their in-room TVs. Content includes movies, photos and music.

Soft AP

Soft AP provides a software access point (AP) or hotspot. Up to four devices can connect wirelessly to the AP, Hotel managers can change the signal level and channel of the Soft AP to suit the connectivity environment of different rooms. In addition, hotels that provide access to the internet can make the internet connection available to guests through the display's Soft AP

Tailor the in-room display as an information and entertainment hub with a highly customizable content management solution

With the LYNK SINC 3.0, hotels can provide a customized display menu for guests. For example, the menu can offer Hotel Info, Hotel Services, Local Info and Events sections. LYNK SINC includes three user interface (UI) templates so hotel personnel can choose the one that works best for the clientele. The UI is highly flexible, with transparency and background images. The LYNK SINC application offers the following features:

- Customized service for groups or individuals
- TV monitoring and management
- Internet protocol TV (IPTV) live multicast

The application also supports Samsung Smart Hub, which enables hotels to download widgets and deliver customized content to guests.

LYNK SINC helps reduce total cost of ownership (TCO) because no set-top box (STB) is needed and the solution is not dependent on a system integrator (SI). Guests can use the simplified system to access tourist guidance, weather and other useful information. They can also access popular social media sites, such as Facebook®, Twitter® and YouTube™.

Figure 2. With LYNK SINC 2.0, hotels can provide a customized display menu for guests

Provide personalized service to each guest with multicode remote controller

Enhance content protection with a pure software DRM solution

Samsung LYNK DRM technology provides hotel facility managers and owners with a safeguarded and cost-effective alternative to traditional hardware-based content protection systems. The technology allows encrypted content to pass safely and display on hospitality screens.

A software-only implementation, Samsung LYNK DRM technology provides quicker recovery for Conditional Access System (CAS) problems. Enhanced functions include a support for a video-on-demand (VoD) system. To help ensure reliability, the technology also supports additions to cable head-end equipment.

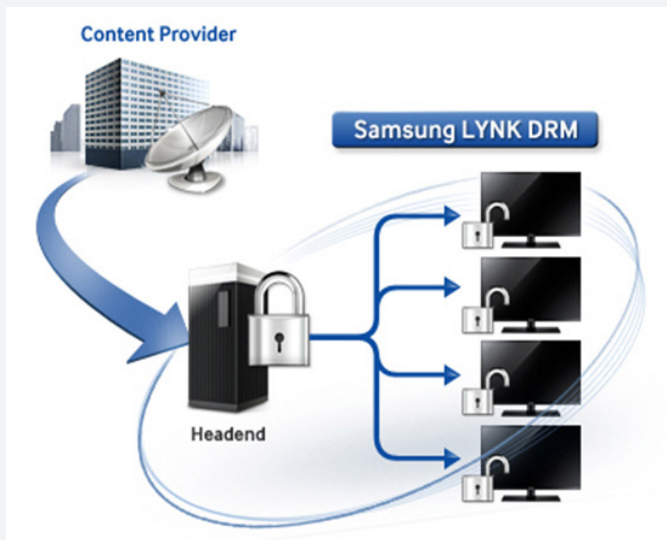

Figure 3. LYNK DRM technology allows encrypted content to pass safely and display on hospitality screens

Dedicate the remote controller for up to ten different groups of displays for easy control

HA59x Series displays feature a multicode remote controller that can be dedicated to a specific group of displays. A hotel manager can combine up to ten groups, and then dedicate the remote controller to one specific group. After the remote controller is designated to a group, the control only affects the displays in the group. In areas such as gyms where multiple displays show numerous channels, this feature minimizes the entanglement of remote controller signals and provides a comfortable and personalized service to each guest.

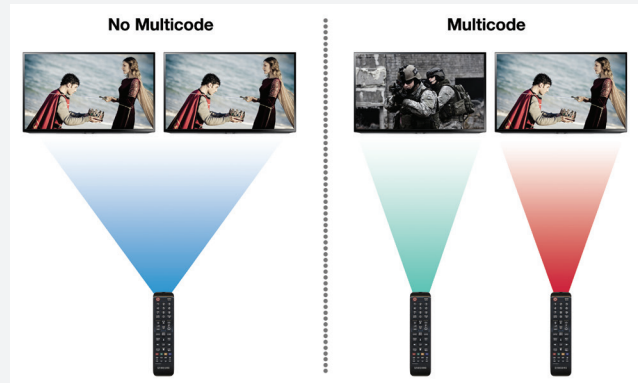

Figure 4. Multicode remote controllers for targeted display control;

Minimize overall TCO with simplified device management and optimized resource management

Samsung Hospitality Displays provide centralized management from a control room, and the convenient and efficient management features provided default also reduce trips to the rooms for display maintenance. Being connected to the hotel's network infrastructure, each in-room display can be monitored and even have the content grouping policy and EPG deployed instantaneously from the control room. The simplified configuration of having just the display that delivers similar convenience without the complexity of an additional set-top box (STB) provides hotels the benefit of one less device to worry about.
