The IoT Movement

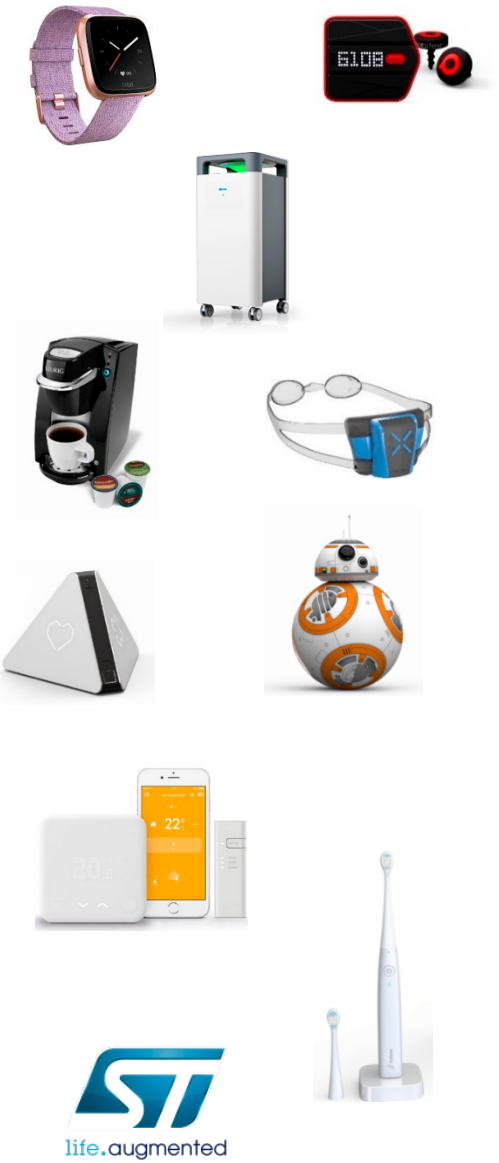

IoT is a movement where any system is able to leverage the Internet and its eco-system

Cloud computing – Low cost embedded computers – Explosion of reliable wireless connectivity – Rapid innovation of low cost sensors

life.augmented

IoT Devices Come in Many Form Factors

life.augmented

…but Their Needs are the Same

	Processing & Security	Sensing & Actuating	Connectivity	Signal Conditioning & Protection	Power & Energy Management
Smart Things	Ultra-Low Power to High Performance Scalable Security solutions	Full range of sensors and actuators	10 cm to 10 km	Nano Amps to Kilo Amps	Nano Watt to Mega Watt
Smart Home					
Smart City					
Smart Industry					

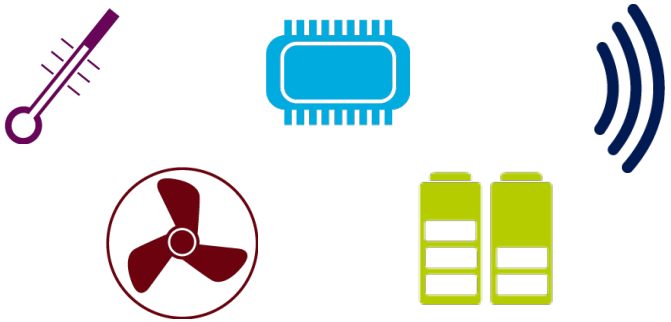

life.augmented

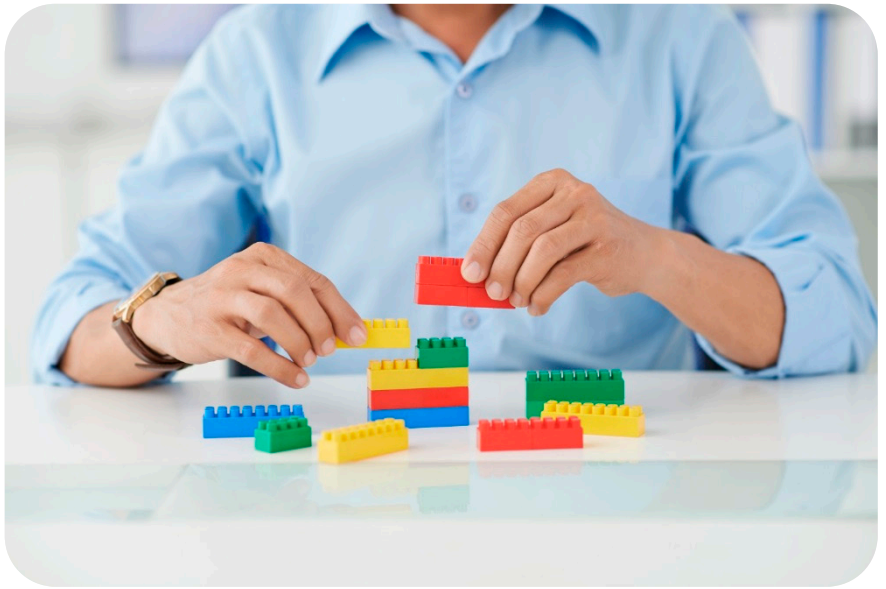

ST has all the building Blocks for the IoT

“Thing” you know how to build.

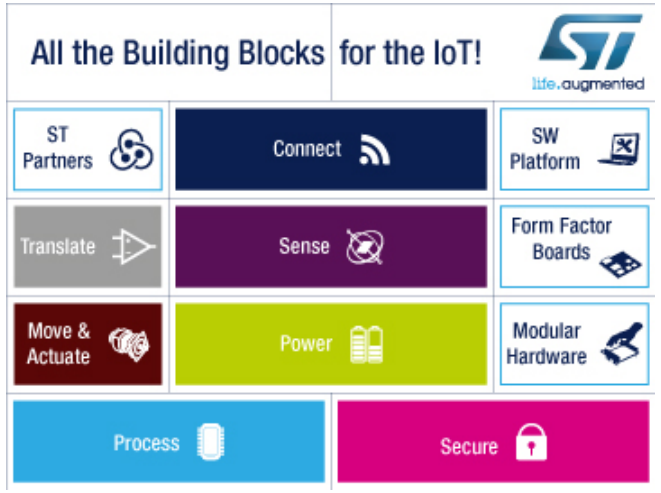

Plus what “Smart”?

Development Software Architecture

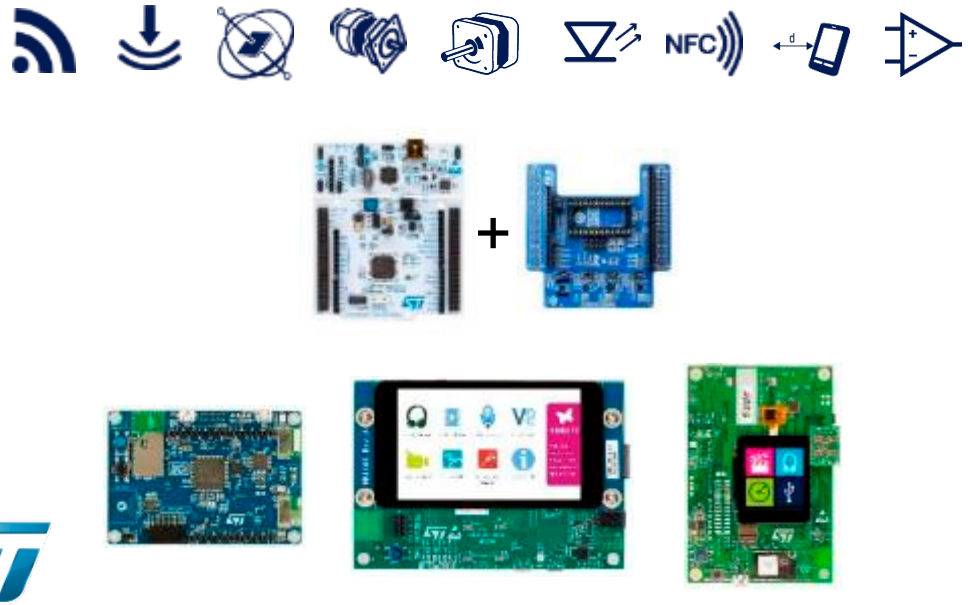

Simple vs Advanced Use Cases

Expansion SW (X-Cube) vs Function Pack

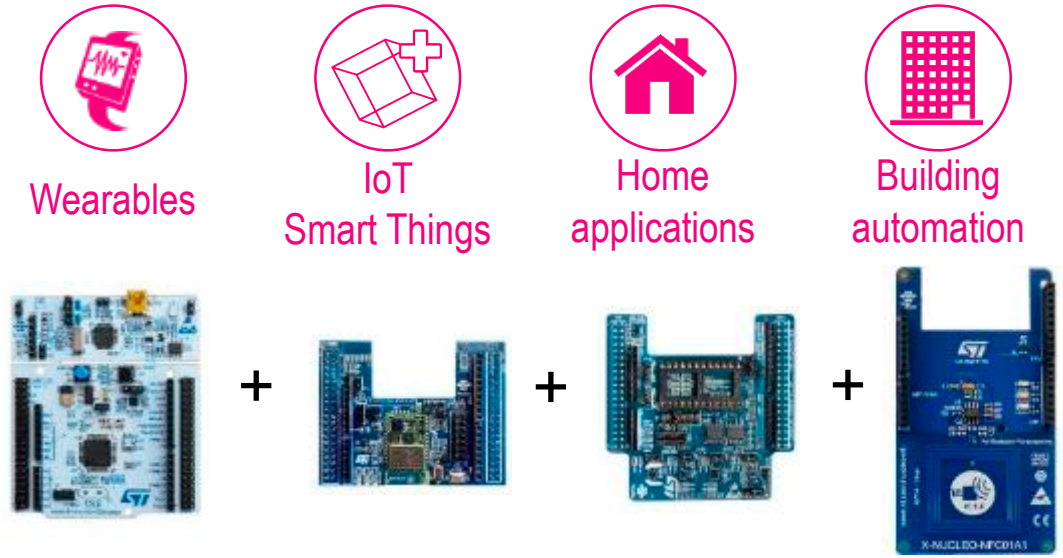

- Prototype with a single expansion board
- Expanded Functionality (e.g. Cloud Connectivity)

Sample applications

- Create advanced use cases based on multiple expansion boards (e.g. Device Management, Predictive Maintenance)

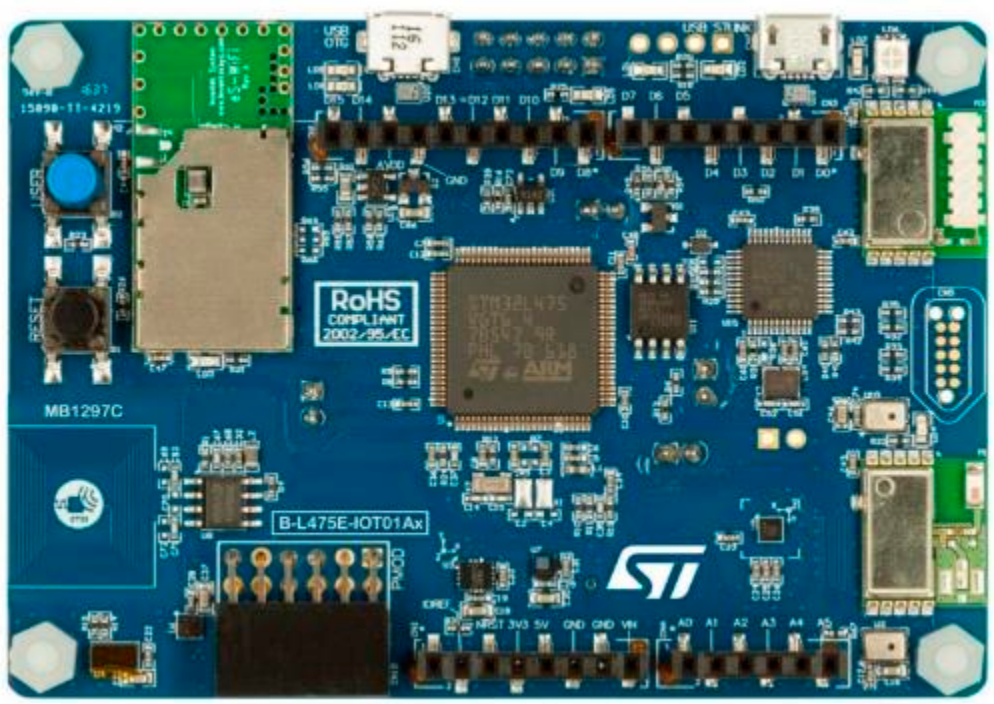

Pre-integrated application example

STM32L475 Discovery Kit IoT Node

B-L475E-IOT01A

- SW Libraries for STM32L4 MCU & Sensors
- Low-power long-range communication (SubGHz)
- Direct Wi-Fi connection to cloud servers
- Environmental awareness: humidity, pressure, temp
- Detection hub: motion, proximity, audio

Download and unzip the SW

Overview

Skill Level: Any Skill Level

All developers and system integrators

An STM32 modular sensor node integrates a combination of hardware boards and pre-built software to enable the fast prototyping of Internet of Things (IoT) applications.

Ingredients

STM32 Microcontroller: Nucleo-F401RE

Sensors board: X-NUCLEO-IKS01A2

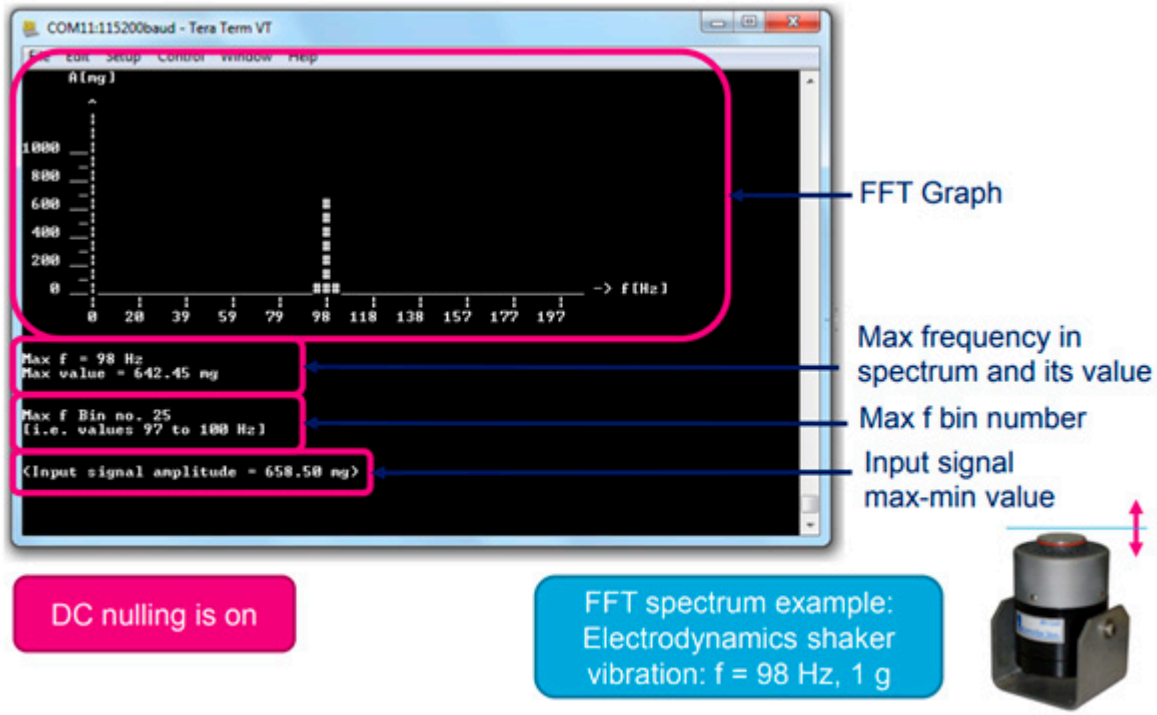

WiFi: X-NUCLEO-IDW01M1

life.augmented

FP-CLD-WATSON1 (2)

Vibration Analysis Feature

- Vibration Analysis (VA), applied in an industrial or maintenance environment aims to reduce maintenance costs and equipment downtime by detecting equipment faults
- To analyze vibrations, accelerometer time domain signal is transferred to frequency domain for more effective analysis. This is achieved with FFT (LSM303AGR or IIS2DH are needed)
- Output of the FFT library
  - Maximum frequency of detected vibration
  - Amplitude for the frequency
  - Motor Status (OK, warning, failure)

Please consult the Quickstart Guide and User Manual for detailed information

Overview

Skill Level: Any Skill Level

All developers and system integrators

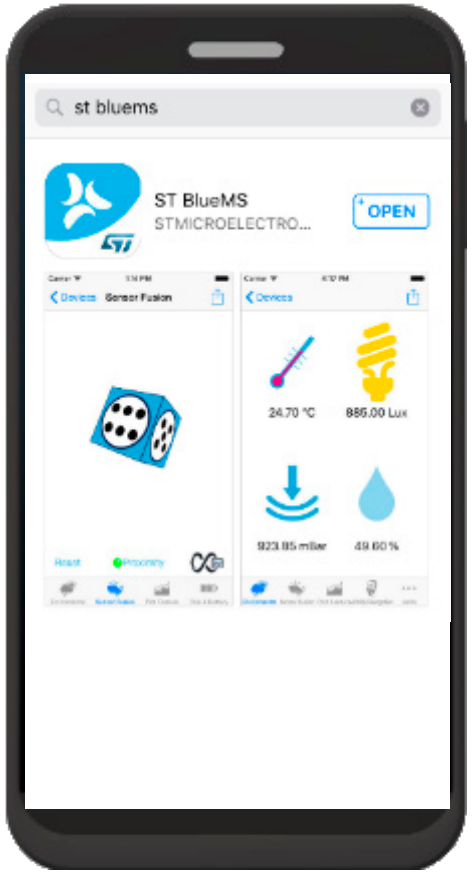

Connect the SensorTile platform to IBM Watson IoT cloud using a mobile phone as a gateway. SensorTile is a tiny, square-shaped module that can fit snugly in your IoT hub or sensor network node and become the core of your solution.

Ingredients

- SensorTile development kit (available on st.com: STEVAL-STLKT01V01). The SensorTile is a tiny, square-shaped IoT module that packs powerful processing capabilities leveraging an 80 MHz STM32L476JGY microcontroller and Bluetooth low energy connectivity based on BlueNRG network processor as well as a wide spectrum of motion and environmental MEMS sensors, including a digital microphone.

Takeaways

- ST has all the building blocks for IoT ready for the different needs of diverse applications
  - Processing and security
  - Sensing and actuating
  - Signal conditioning and protection
  - Wired and wireless connectivity
  - Power and energy management

- ST makes development of devices for the IoT fast and affordable and provides device kit and FW packages to connect to the major Cloud providers
