## Part 1 - Comparing Ratios

In this problem set, you will compare ratios with different denominators. Use the <, >, and = signs under the [TEST] menu ([2nd MATH). Identify which is the better deal.

1. Boxes of Cereal:

Box 1: $\$ 3.50$ for 24 ounces
Box 2: $\$ 2.40$ for 16 ounces
Answer: $\qquad$
2. Containers of Juice:

Jug 1: \$2.99 for 18 ounces
Jug 2: $\$ 4.29$ for 64 ounces
Answer: $\qquad$

Enter each ratio as a fraction and insert one of the comparisons between. In this example, press ALPHA [F1] ENTER $3 \square 50$ 2 4 then [2nd [TEST] and choose the $<,>$, or $=$, and then ALPHA [F1] ENTER 2 40 ( 0 6. Press ENTER. The resulting 1 means the statement is true. A 0 result would mean the statement is false.

3. Tortillas:

Package 1: $\$ 1.99$ for 15 tortillas
Package 2: $\$ 2.49$ for 20 tortillas
Answer: $\qquad$

## Part 2 - Writing Equivalent Ratios

In Problems 4-6, you will rewrite equivalent ratios to have comparisons with the same denominators. Write the equivalent ratio for each and then compare. Identify which is the better deal.
4. Boxes of Cereal:

Box 1: $\$ 3.50$ for 24 ounces = $\qquad$
Box 2: $\$ 2.40$ for 16 ounces = $\qquad$
Answer: $\qquad$

Find an equivalent ratio using the LCM for each of the ratios. This shows confirmation that you have found an equivalent ratio.

$\qquad$
5. Ears of corn:

Option 1: $\$ 1.50$ for 3 ears $=$ $\qquad$
Option 2: $\$ 2.00$ for 8 ears = $\qquad$
Answer: $\qquad$
6. Chips:

Bag 1: $\$ 2.90$ for 18 ounces = $\qquad$
Bag 2: $\$ 4.00$ for 36 ounces = $\qquad$
Answer: $\qquad$
7. When would you likely use equivalent ratios to find common denominators?

## Part 3 - Writing Unit Rates

Find the unit rate for each item using division. Then identify which option is a better deal.
8. Cheese:

Bag 1: $\$ 2.89$ for 15 ounces = $\qquad$
Bag 2: $\$ 3.29$ for 19 ounces = $\qquad$
Answer: $\qquad$
10. Movie Passes:

Sale 1: $\$ 28$ for 3 tickets = $\qquad$
Sale 2: $\$ 40$ for 5 tickets = $\qquad$
Answer: $\qquad$
9. Canned Tomatoes:

Can 1: $\$ 0.89$ for 13 ounces = $\qquad$
Can 2: $\$ 1.99$ for 29 ounces = $\qquad$
Answer: $\qquad$
11. Socks:

Bag 1: $\$ 8.99$ for 5 pair = $\qquad$
Bag 2: $\$ 17.29$ for 9 pair = $\qquad$
Answer: $\qquad$
12. When would you prefer to use unit rates instead of finding like denominators to compare prices?
$\qquad$
$\qquad$
