Solving Systems by Graphing

## Move to page 1.2.

Questions 1-3 refer to the system of equations graphed in the TI-Nspire document:

$$
\begin{aligned}
& f 1(x)=x+1 \\
& f 2(x)=-x+3
\end{aligned}
$$

Move the point that is on the $x$-axis to the left or right as needed.

1. Move the point so that $x=-2$ in both sets of coordinates. Is either of these ordered pairs a solution to the given system of equations? Justify your answer.
2. Move the point so that $x=3$ in both sets of coordinates. Is either of these ordered pairs a solution to the given system of equations? Justify your answer.
3. What is the solution to the system pictured? Explain how you know.

4. Jean told the class that she knew of another system that had the same solution as the system pictured in the graph. Her system is

$$
\begin{aligned}
& f 1(x)=x+1 \\
& f 3(x)=4 x-2
\end{aligned}
$$

Bryan argued that he thought that the system with the same solution as the system pictured in the graph was the following:

$$
\begin{aligned}
& f 2(x)=-x+3 \\
& f 4(x)=2 x
\end{aligned}
$$

Who is right? Explain your reasoning.
5. Find the solution to the following system graphically. Show the necessary work to check the solution.

$$
\begin{aligned}
& f 1(x)=x+1 \\
& f 2(x)=-x-3
\end{aligned}
$$

6. Find the solution to the following system graphically. Show the necessary work to check the solution.

$$
\begin{aligned}
& f 1(x)=-x+3 \\
& f 2(x)=-x-3
\end{aligned}
$$

7. How does the solution to the system in problem 6 compare to the solution of the system in the previous problems? Justify your answer.
