... for the user

Configuration and Use of the MeterAssistant Option

Purpose

The MeterAssistant tool automatically submits meter reads to Xerox from networked devices, so that you do not need to manually collect and report these figures. This document describes how to set up the MeterAssistant and automatic email alerts to notify you when a meter read occurs.

Note: The configuration described in this document is unique to WC/WCP 232/238/245/255/265/275 devices. To use the MeterAssistant with other Xerox devices, access the SMart eSolutions page on www.xerox.com/smarteresolutions and follow the instructions.

This document applies to the **Xerox** products indicated in the table below. For some products, it is assumed that your device is equipped with the appropriate option to support this document.

x	WC 7655/7665
x	WC Pro 232/238/245/255/265/275
x	WC 232/238/245/255/265/275
	WC Pro C2128/C2636/C3545
	WC Pro 165/175
	WC M165/M175
	WC Pro 32/40 Color
	WC Pro 65/75/90
	WC Pro 35/45/55
	WC M35/M45/M55
	DC 555/545/535
	DC 490/480/470/460
	DC 440/432/425/420

Xerox Device Configuration

MeterAssistant configuration includes 3 activities:

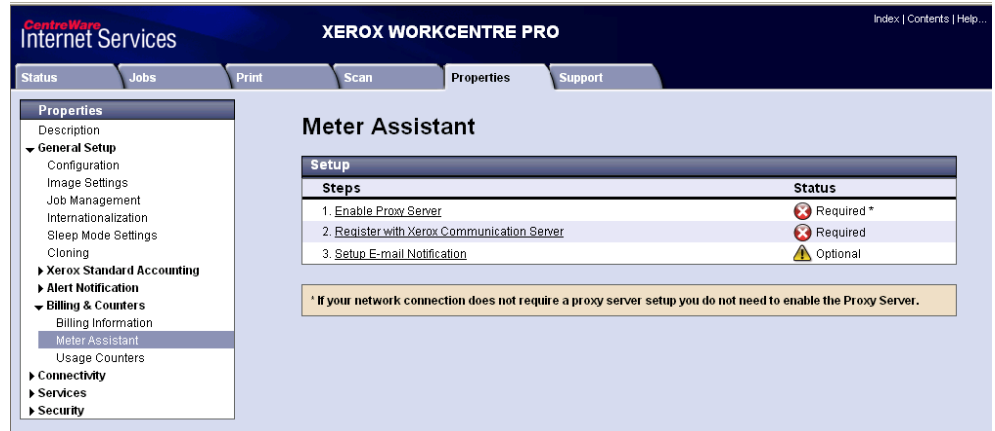

- Proxy Server Setup. A proxy server is used to enable communication through a firewall. If you do not use a proxy server, you must configure a DNS or WINS server.
- Register with the Xerox Communication Server. This activity establishes communication between the device and Xerox. You must make the connection before you can enable MeterAssistant on xerox.com. See "Registering for a Xerox Account and Setting Up Automatic Meter Reads," later in this document.
- Setup Email Notification (optional). This option sends an alert to the email addresses you provide. Alerts are available to report when the communication server receives the meter data and/or if registration with the communication server is cancelled. You must have SMTP set up and functioning to use the email notification (refer to the documentation you received with your device to configure SMTP).

The following sections contain configuration procedures to setup the MeterAssistant.

Proxy Server Setup

If you do not use an Internet proxy server in your network, skip this section and follow the instructions in the one of the following sections, “DNS Server Information” or WINS Server Information.

1. To access the MeterAssistant setup pages, enter your Xerox device’s IP address in a browser’s (for example, Internet Explorer or Netscape) **Address** field. On the device’s home page, select the **Properties** tab, expand **General Setup** and **Billing & Counters**, then select **Meter Assistant**.

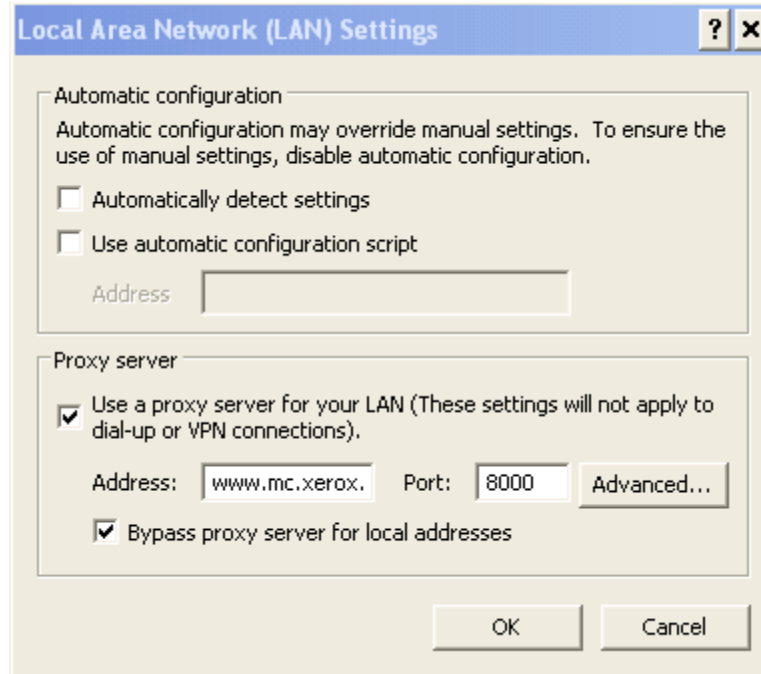

2. On the Meter Assistant page, select **Enable Proxy Server**.

Note: This procedure requires that you enter the IP address or hostname and a port number. If you use Netscape, ask your system administrator where to find the information. If you use Internet Explorer, do the following to determine this data:

- a. On the Internet Explorer menu select **Tools**.
- b. Select **Internet Options**.

- c. Select the **Connections** tab, then click **Lan Settings**. The proxy server IP address or host name and the port are located in the **Proxy server** section. Click in the **Address** field and scroll right/left to view the complete entry.

- d. Click **Cancel** when finished.
3. Select **Enabled** and choose **IP Address** or **Host Name**.
4. Enter the IP address or host name of the proxy server in your network. The default port is 8080. You can change the port number if necessary.
5. Click **Apply** when finished. The MeterAssistant page is displayed again.
6. If requested, enter the administrator **User name** and **Password**.

DNS Server Configuration

Use the information in this section if you do not have a proxy server in your network configuration and you use DNS. Skip this section if you already configured your proxy server. If you use a WINS server skip to the next section “WINS Server Configuration.”

DNS information is located in the TCP/IP page of a device’s Web UI. To access the TCP/IP page access the device’s Web UI and select **Properties>Connectivity>Protocols>TCP/IP**.

The screenshot displays the Xerox WorkCentre Web UI for configuring TCP/IP settings. The interface includes a top navigation bar with 'Status', 'Jobs', 'Print', 'Scan', 'Properties', and 'Support'. A left sidebar lists various configuration categories, with 'TCP/IP' selected. The main area is titled 'TCP/IP' and contains three sub-sections: 'General', 'Domain Name', and 'DNS Configuration'. The 'General' section has fields for Protocol (checked 'Enabled'), Physical Connection (Ethernet), Host Name (BABY), IP Address Resolution (DHCP), Machine IP Address (13.121.8.149), Subnet Mask (255.255.255.0), and Gateway Address (13.121.8.1). The 'Domain Name' section has a field for Domain Name (dssc.mc.xerox.com). The 'DNS Configuration' section has fields for Preferred DNS Server (13.121.11.9), Alternate DNS Server 1 (13.121.9.188), Alternate DNS Server 2 (13.135.0.11), and Dynamic DNS Registration (checked 'Enabled').

There are several ways to acquire the DNS information.

- If your DHCP server is configured to transfer DNS information:
 - DNS information may already be entered. If the **IP Address Resolution** field contains **DHCP** the DNS Configuration section is populated with as much information as the DHCP server has available.
 - If the **IP Address Resolution** field contains **STATIC**, select **DHCP** and click **Apply**. The Xerox device requests TCP/IP configuration information from the DHCP server. The DNS Configuration section is populated with as much information as the DHCP server has available.

Note: If you change from **STATIC** to **DHCP** the IP address assigned to the device can change. To access the device’s Web UI use the new IP address.

- To enter DNS information manually, in the **IP Address Resolution** select **STATIC**. After the information is entered, leave **STATIC** in the IP Address Resolution field, or change it to **DHCP** (which ever is appropriate for your network), and click **Apply**.

WINS Server Configuration

Use the procedure in this section if you do not have a proxy server in your network configuration and you use a WINS server. Skip this section if you already configured your DNS or proxy server.

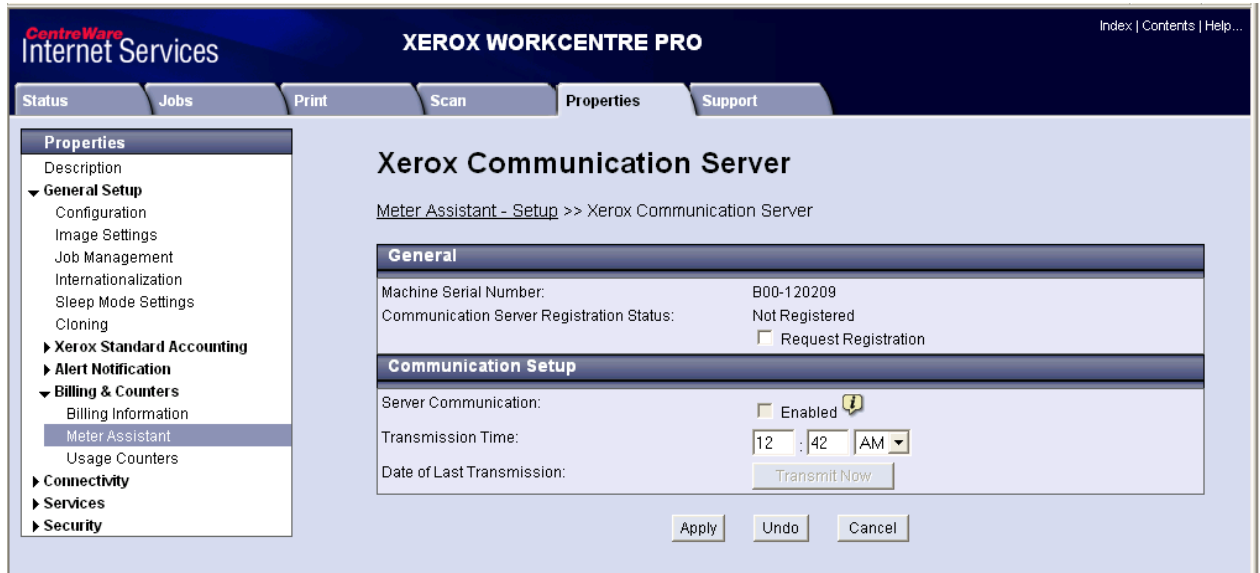

WINS information is located in the Microsoft Networking page of a device's Web UI. To access the Microsoft Networking page, access the device's Web UI and select **Properties>Connectivity>Protocols>Microsoft Networking**.

The screenshot displays the Xerox WorkCentre Web UI. The top navigation bar includes 'Status', 'Jobs', 'Print', 'Scan', 'Properties', and 'Support'. The left sidebar shows a tree view with 'Microsoft Networking' selected. The main content area is divided into two sections: 'Microsoft Networking' and 'WINS'. The 'Microsoft Networking' section has a 'Filing Destination' sub-section with fields for Protocol (checked 'Enabled'), Physical Connection (Ethernet), Transport (TCP/IP), Maximum Connections (30), Connection Timeout (600 seconds), Workgroup (WORKGROUP), SMB Host Name (BABY), and Share Name (PRINTER). The 'WINS' section has a 'Server Information' sub-section with fields for Protocol (checked 'enabled'), Primary Server IP Address and Port (13.151.32.32), and Secondary Server IP Address and Port (13.135.65.50). A note states: 'Note: If DHCP is configured, WINS IP Address(es) will be overridden.' At the bottom, there are 'Apply', 'Undo', and 'Default All' buttons.

1. If you are using a WINS server check the box to enable the **Protocol**.
2. To enter WINS Server Information:
 - If **IP Address Resolution** is set to **DHCP** on the TCP/IP page and the DHCP server is configured to transfer WINS information, the primary and secondary IP address and port fields are populated.
 - If **IP Address Resolution** is set to **STATIC** on the TCP/IP page, enter the primary and secondary IP address and port information manually. If the IP Address Resolution is changed to DHCP these settings are overridden.
3. Click **Apply**.

Registering with the Xerox Communication Server

1. On the MeterAssistant page, select **Register with Xerox Communication Server**.

2. If the **Communication Server Registration Status** is **Not Registered**, select the **Request Registration** box and click **Apply**.

Wait a few minutes while the device registers with the communication server at xerox.com. The following message appears when the registration is complete.

3. Click **OK** to return to the Xerox Communication Server page.
4. In the **Communication Setup** section, verify the **Enabled** box is checked. A random time appears in the **Transmission Time** fields. You can change this time if required. Click **Apply** when complete.
5. If requested, enter the administrator **User name** and **Password**.

Setup Email Notification (optional)

On the MeterAssistant page, select **Setup Email Notification** to display the Billing Meter Read Alerts page.

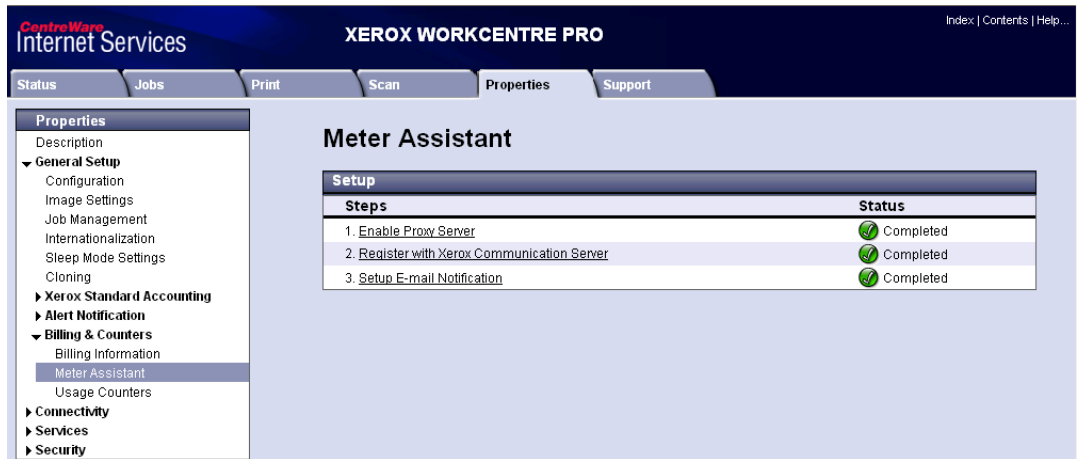

The screenshot shows the 'Billing Meter Read Alerts' page in the Xerox WorkCentre Pro interface. The left sidebar contains a 'Properties' menu with options like 'General Setup', 'Alert Notification', and 'Billing & Counters'. The main area is titled 'Billing Meter Read Alerts' and features a 'Recipient Group Addresses' section with a text input field for 'Billing Administrator E-mail Address:' and 'Add', 'Edit', and 'Delete' buttons. Below this is a 'Send Alert:' section with two checked checkboxes: 'When Billing Meter Reads are reported' and 'If registration with Xerox Communication Server is cancelled'. An 'Apply' button is at the bottom right.

1. Click **Add** to display the Meter Read Alert Addresses page.

The screenshot shows the 'Meter Read Alert Addresses' page in the Xerox WorkCentre Pro interface. The left sidebar is the same as in the previous screenshot. The main area is titled 'Meter Read Alert Addresses' and features a 'Billing Meter Reads Group' section. It includes an 'Add E-mail:' field with an 'Add' button, an 'E-mail Addresses:' list box containing 'meterassistant@xerox.com' and 'meterassistant2@xerox.com' with a 'Delete' button, an 'Edit E-mail:' field with a 'Replace' button, and a '"Reply to" E-mail Address:' field with the value 'printersupportteam@xerox.com'. A note at the bottom states: 'Note: This is a required field. This value will also be applied to the General Device Alerts "Reply To:" E-mail Address field.' 'Apply', 'Undo', and 'Cancel' buttons are at the bottom.

2. In the **Add E-mail** field, enter the valid email address of a recipient of the meter read alerts. Click **Add**. The address appears in the **E-mail Addresses** box. If others are to receive the meter read alerts, repeat this step.
3. Click **Delete** to remove a highlighted address from the **E-mail Addresses** box. To change an address, highlight an entry in the **E-mail Addresses** box, make changes to the address that appears in **Edit E-mail**, and click **Replace**.
4. In the **"Reply to" E-mail Address** field, enter an address that appears in the To line when alert recipients reply to an email alert.
5. When finished, click **Apply**.
6. If requested, enter the administrator **User name** and **Password**.

When all MeterAssistant setup is complete, the Meter Assistant page displays the status of each item.

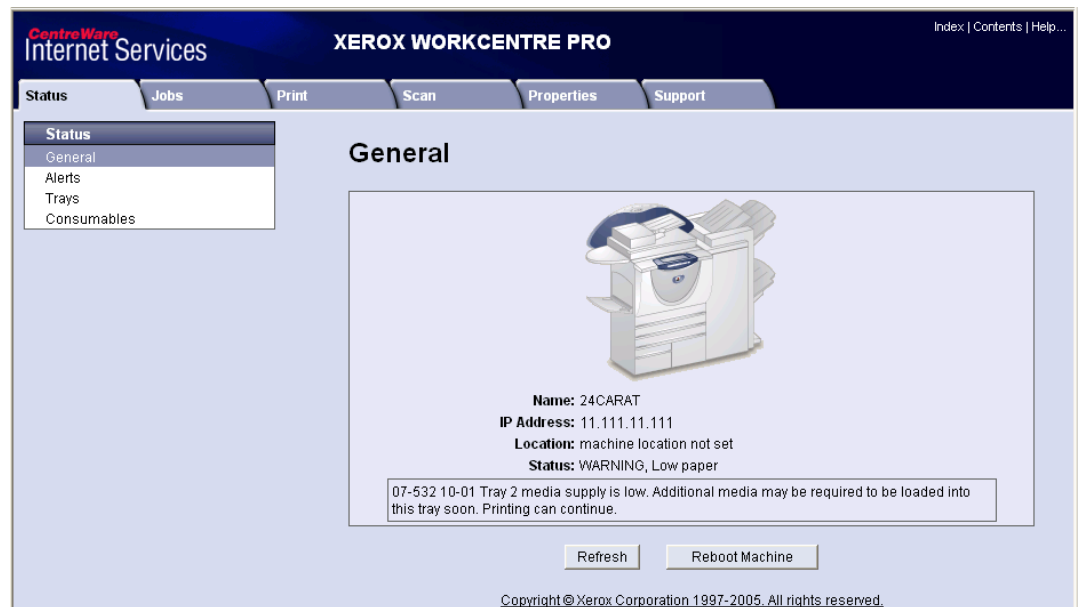

Steps	Status
1. Enable Proxy Server	Completed
2. Register with Xerox Communication Server	Completed
3. Setup E-mail Notification	Completed

Reboot Device to Apply All Settings

To verify that all settings are applied, reboot the device.

1. Select the **Status** tab at the top left side of the devices Internet Services page.

Name: 24CARAT
IP Address: 11.111.11.111
Location: machine location not set
Status: WARNING, Low paper

07-532 10-01 Tray 2 media supply is low. Additional media may be required to be loaded into this tray soon. Printing can continue.

2. Click **Reboot Machine**.

Registering for a Xerox Account and Setting Up Automatic Meter Reads

Processing communication server registration may take up to one hour before it appears in your account's list of devices. To use the MeterAssistant tool you must have an online Xerox account.

1. Access www.Xerox.com.
2. In the column on the left of the page under Customer Resources, select **Meter Reads**.

The screenshot shows the Xerox website interface. At the top, there is a navigation bar with the Xerox logo, a search bar, and links for "United States", "Change Country", and "Products A-Z Index". Below this is a secondary navigation bar with links for "Where to Buy", "Contact Us", "Log In/My Xerox", "Account Management", and "Shopping Cart". A main navigation bar contains categories: "Office Equipment", "Production Equipment", "Services & Outsourcing", "Supplies", and "Support & Drivers".

The main content area is divided into two columns. The left column has a section titled "Already have an account?" with a "Log in" link, and a section titled "New Users" with links for "Sign up for Meter Readings". The right column features a large banner for the "Meter Reads System" with the tagline "DYNAMIC. INTERACTIVE. EFFICIENT." and a sub-headline "Submit your meter reads online and experience the next level of office management efficiency." Below the banner, the text "POINT, CLICK, SUBMIT." is followed by a paragraph: "Enjoy the ease and efficiency of submitting meter readings online, including these features:"

- The ability to submit meter readings online for Xerox equipment
- Email notification when meter readings are due
- Three ways to report readings:
 - Our easy Web form
 - A personalized spreadsheet - download a listing of your equipment, enter meter readings, and upload the file to us
 - Automatically, from your equipment directly to Xerox, using our [SMart eSolutions](#) software or [prInteract solution](#)

Use the [Machine Eligibility Test](#) to determine if you can take advantage of SMart eSolutions capabilities.

3. If you already have an account, select **Log in**. If not, select **Sign up for Meter Reads**.

- When the Log in window appears, if you have an account, enter your email address in **What is your email address?**, then skip to step 6. If not, select **register** and continue with the next step.
