

At the heart of the solution is a robust Cisco network underground, which enables the firm to track people and equipment at all times. This solution helps Goldcorp respond to emergencies immediately, locate equipment, and manage its energy usage and costs with ventilation on demand.

"We now have the ability to obtain information from pretty much every piece of equipment we have in the mine," says Morin. "It's much different than in the past, when we might have to wait 30 days to obta
