The Kennisnet educational community cloud serves two purposes. First, it supports Kennisnet education services such as video sharing (Teleblik), federation (Kennisnet Federatie), content sharing (Edurep), Wi-Fi (eduroam), and online communities and portals such as Leraar24 and Mediawijzer.net. Second, the organization's 120 employees rely on the cloud every day for their office, finance, and document management and other IT applications. Kennisnet owns the fully virtualized cloud, and it is managed and hosted by Vancis.

## **The results**

Cisco technology is helping Kennisnet deliver an educational community
