If complexity keeps you from using virtual desktop infrastructure (VDI), look no further. Cisco HyperFlex™ Systems deliver the adaptive VDI environments you need.

Implementing VDI environments is turning out to be more complicated than many companies expected. The high initial costs, ineffective scaling, and unpredictable performance of network storage often inhibit the adoption of VDI technology and keep you from benefiting from desktop efficiency. Cisco HyperFlex Systems adapt to your evolving environment. With simplicity, rapid deployment, and flexible scaling, you can start small and grow your VDI deployments with ease.

cable routing, helping it adapt quickly to changes in hardware configuration. You can move a node from the loading dock and add it to your cluster simply by plugging in network and power cables–no manual node configuration is required. Cisco Unified Computing System™ (Cisco UCS®) service profiles prepare every aspect of a
