Move into Cloud with PeopleSoft Managed Cloud Service

ORACLE®
MANAGED CLOUD SERVICES

"Oracle Managed Cloud Services has delivered exceptional value to Carlson. We completed our first migration a month ahead of schedule and cut planned downtime in half, while improving application performance upwards of 50% for some systems."

BRIAN KRAFT
DIRECTOR, FINANCIAL AND HR SYSTEMS
CARLSON COMPANIES

KEYBUSNIESS BENEFITS

• Integrated, comprehensive package
• High availability due to proprietary tooling
• Optimized global labor delivery
• Easier upgrades and cloud adoption
• Greatly reduced TCO

Running and maintaining software in-house can create ongoing challenges, from balancing system operations with making software investments to meeting a plethora of business-user needs. In addition to these challenges enterprises have to come up with a strategy and plan to adopt cloud applications such as Taleo and HCM Cloud. Moving your current version of Oracle PeopleSoft (PSFT) to Oracle's managed private cloud can help alleviate many of these challenges.

Oracle PeopleSoft Managed Cloud Service

Oracle Managed Cloud Services employs a two phase process to save you time, money and resources. First we "protect" your software investment by migrating your current version of Oracle PSFT to our modern managed cloud platform. You get the latest hardware and platform innovations, secure and consistent data management practices and Oracle experts running and maintaining your Oracle PSFT in a private managed cloud. Then as a second phase, when you are ready, you can ask Oracle Managed Cloud Services to help "evolve" your business to the latest software innovations available in the latest release of Oracle PSFT or public cloud application. Oracle Managed Cloud experts will oversee that software upgrade to evolve your business to the latest PSFT release when you are ready.

Oracle Managed Cloud Services is a critical and proven part of Oracle's broader cloud offerings and enables organizations to leverage their Oracle investments to extend into the cloud with greater value, choice and confidence. For more than fifteen years, millions of end users have used Oracle Managed Cloud Services to increase their productivity and gain competitive advantage. Oracle delivers enterprise-grade, end-to-end managed cloud services across its broad portfolio of business applications, middleware, database, and hardware technologies.

• **Minimize Business Disruption**. By operating in Oracle Private Cloud, you will benefit from improved patching times, higher availability and faster issue resolution. This will allow your IT to focus on your core business innovation and leave the backend to us

• **Decrease Risk by Moving to Cloud**. Moving to Cloud reduces your risk along multiple fronts – vulnerability, network protection, physical security, standard security practices etc for the entire stack

• **Plan for Public Cloud Adoption**. Because we adopt Oracle standard practices for running applications in private cloud, it becomes easier to adopt Public Cloud applications and integrate them to existing PSFT applications. Customers benefit from better security, cloud integration capabilities and functional services for PSFT as they adopt cloud applications over few years

ORACLE®

Minimize Business Disruption

Oracle PeopleSoft Managed Cloud Service makes it easier to upgrade and migrate to the cloud. Staffing efficiencies result by having PeopleSoft experts manage PeopleSoft implementation and upgrades to the cloud. Many IT organizations want to leverage the benefits of the cloud for their existing Oracle applications. Oracle Managed Cloud Services removes the burden of tactical work, and allows your IT team to focus on strategic business projects to move your organization forward.

In developing the PeopleSoft Managed Cloud Service offering, Oracle has leveraged its global presence to move the work offshore. This optimized global staffing and a high level of automation helps drive costs down. With fees spread over several years, it becomes easier to plan and budget your IT costs.

The Oracle PeopleSoft Managed Cloud Service offering includes the following benefits:

- Greatly reduced system downtime managing to strict SLAs

- Functional Testing -- includes applying Oracle's expertise to assist you in updating your PSFT test scripts; and also third-party application support will be considered

- Near-zero downtime can be achieved during transition to the cloud. Transaction data and other data can be quickly replicated using Oracle GoldenGate® technology.

- Run and Maintain Services – Oracle Managed Cloud Services runs more instances of Oracle Applications than any other provider in the industry. This produces an enormous scale advantage and the ability to apply knowledge gained in running environments most effectively. Oracle Managed Cloud Services also has a direct line into PSFT product development, and feeds any issues directly to engineering. The fixes then benefit all PeopleSoft customers

Decrease Risk by Moving to Cloud

With Oracle Managed Cloud Services, your systems and data are secured and protected at every layer. Oracle has built cross-functional teams spanning product developers, cloud experts, and seasoned field consultants to create many new tools and methods for migrating and upgrading your applications, modifications and data in the fastest, lowest risk, most economical way possible. These tools include proprietary CEMLI tools, cloud project spaces, and other functional tooling.

Oracle also reduces risk by leveraging the experience gained from years of managed services in the cloud to refine a Go-Live Center, with dedicated teams focused only on bringing customers live successfully. This dedicated Go-Live Center has helped reduce the number of post-live issues by 54%.

Plan for Public Cloud Adoption

Cloud integrations represent the biggest hurdle to realizing the benefits of adopting a cloud delivery model. Integration know-how, ability to meet ongoing demands for regular maintenance, monitoring, reporting and management activities such as patching are key required areas of expertise to avoid potential cost overruns. Managed Cloud Integration Service has been designed to help enterprises overcome challenges in adopting public cloud applications such as integrating Oracle HCM Cloud with PSFT. Customers benefit from cross-cloud business transaction monitoring and the Cloud Automation Platform (CAP) capabilities.

Oracle Managed Cloud Services

Oracle Managed Cloud Services (OMCS) is a key pillar of Oracle's strategy for Cloud. OMCS builds and manages private clouds for customers who want to leverage the existing investments in Oracle applications such as E-Business Suite, PeopleSoft. OMCS is the On Ramp to public cloud for Oracle customers.
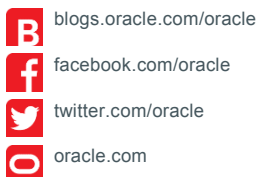

- **Expertise**. With over fourteen years of experience securely managing customer environments in Oracle datacenters, partner datacenters and at customer's premises, Oracle has developed a strong expertise in helping customers implement Oracle security products.

- **Layered In-depth Security**. Security is ingrained in all activities at OMCS. Starting with certified configurations that define the specific configurations for the entire technology stack to the multiple layers of security including SIEM, encryption, auditing, sensitive data obfuscation and data loss prevention solutions.

- **Breadth and Depth of Service Portfolio**. OMCS has a very broad portfolio of services. Services are designed to help customers meet industry compliance requirements and minimize security risks, enable use of cloud services and integrate with external service providers. Service portfolio includes Enhanced Security Services, managed database security services available both at an Oracle datacenter and on Customer's premises, and managed identity services

Hardware and Software, Engineered to Work Together

Oracle is committed to developing practices and products that help protect the environment
