

# Transform Your Supply Chain Business Processes

Cloud computing is changing the way manufacturing organizations consume and use IT services – providing timely solutions to address industry and supply chain challenges

## SUPPLY CHAIN CLOUD - GROWING MOMENTUM

The use of cloud in the supply chain is well established as a way to deliver business applications

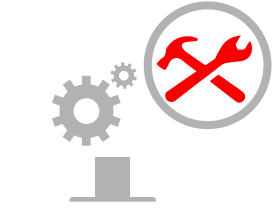

70% of manufacturing companies are using cloud applications somewhere in their supply chain

70%

25%

While another 25% are actively considering cloud

## PAIN COMPANIES EXPERIENCE TODAY WITH THEIR CURRENT SUPPLY CHAIN APPLICATIONS

### Customization

The ability to add new functionality and customize on-premise software implementations in a timely fashion is slow and expensive

### Cost

IT budgets are being reduced in parallel with climbing maintenance costs for traditional supply chain implementations

### Scalability

Providing the correct level of bandwidth and responding quickly to changes in demand is a huge issue for CIOs

### Security

Adequate levels of redundancy and security to ensure business continuity in the event of system failure

## BENEFITS OF MOVING TO THE CLOUD

### Rapid ROI

Lowest total cost of ownership with low upfront investment and subscription based pricing

### Greater Scalability

Greater IT flexibility and adaptability that allow for easier expansion and contraction

### Minimal Risk

Perceived adoption risks have been largely mitigated given equivalent functionality to on-premise alternatives

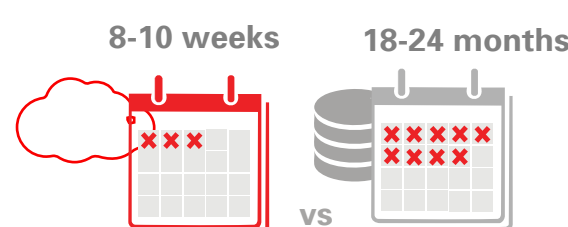

### Fewer IT Resources

Reallocate IT expenses towards resources better equipped to grow your business

### Fast and Easy Deployment

## SUPPLY CHAIN CLOUD GROWTH

The direction is clear, growth rates for cloud applications are more robust than on-premise alternatives

### Annual Growth Rate through 2019

### Cloud

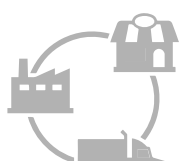

### On-premise

### Logistics

19.8%

4.8%

### Production Planning

16.4%

6.3%

### Inventory Management

26.5%

4.2%

## RECOMMENDATIONS FOR SUPPLY CHAIN ORGANIZATIONS

The best choices for Cloud solutions, in terms of functionality, safety, knowledge, and application history, come from traditional on-premise vendors

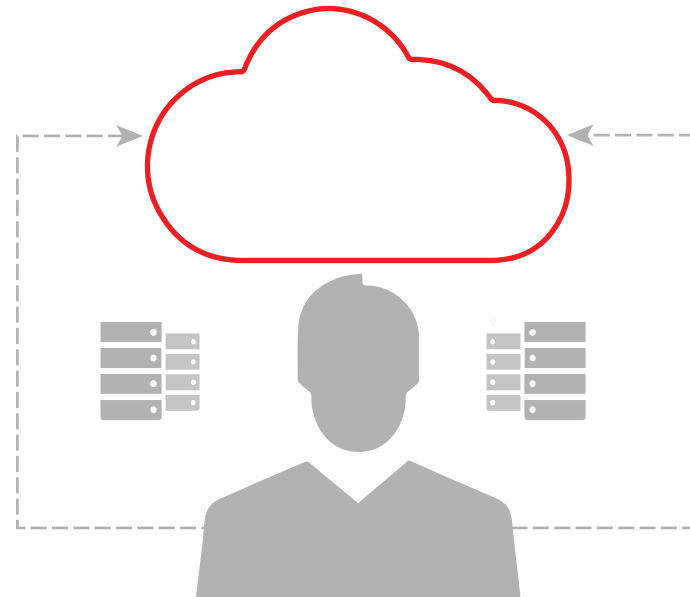

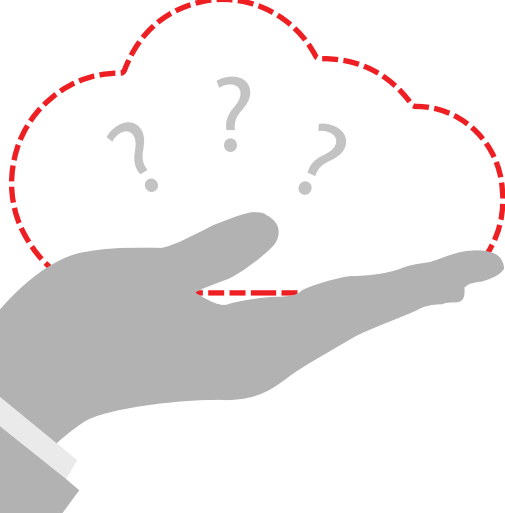

### Pure Play Cloud Vendors

Often do not have depth of knowledge of the supply chain

### Traditional Vendors

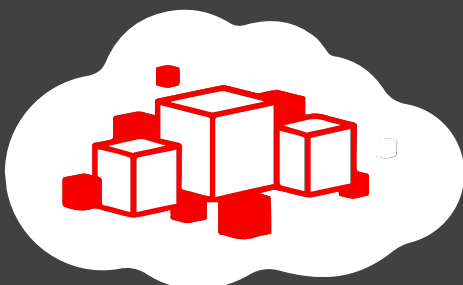

Offer the most prudent path to the Cloud

Vs

## Oracle Supply Chain Management Cloud

Best-In-Class. Fast. Secure. Scalable.
