

## **Adobe ® RoboHelp® 9.0.1 ReadMe**

Welcome to Adobe RoboHelp 9.0.1 readme. This document contains information about major changes that are included with this update.

### **List of major issues resolved in this update.**

1. RoboHelp does not recognize 64-bit Word installation in 64-bit mode
2. Printed Documentation output doesn't honor a CBT applied on multilevel lists if another Word Template list style overrides it
3. CBT gets applied randomly in topic content on switching between the HTML view and the Design view in certain scenarios
4. CBT gets removed from UDV on inserting another UDV in the same paragraph
5. Language and encoding options are saved only for WebHelp and AIR output
6. While using DUCC output, the Use Lowercase File Names setting isn't honored due to difference in the capitalization of ContentList.xml in whtbar.js
7. RoboHelp crashes on generating output if the project has PDF baggage files with invalid font information
8. RoboHelp crashes on accessing the TOC or Index pod after loading a workspace
9. Non-UTF-8 and high ASCII characters get corrupted in the WebHelp output for topics created or edited outside RoboHelp
10. ePub output does not show the TOC if the RoboHelp project name has spaces
11. Duplicate content appears in the ePub output in case of certain TOC references
12. Duplicate index and glossary entries are shown in AIR Help output for merged projects
13. TOC of child project doesn't appear in the merged browser-based AIR Help output
14. Some of the list items are not temporarily shown in the Design editor on deleting any line that is not part of the paragraph list

15. List gets duplicated in the source topic on accessing an invalid bookmark link to the same topic during preview
16. Some of the links for resources aren't properly maintained after importing comments from PDF in the review workflow.
17. Search doesn't find PDF baggage files in output generated through command-line compilation
18. Search highlighting issues in Firefox, Safari, Chrome, and AIR Help if the topic content has hard line break
19. A span tag is introduced in the HTML view of topic content (with style and CBT applied) when you switch from the Design view
20. Style mapping of FrameMaker content containing certain special characters in xrefs not honored in RoboHelp
21. Server settings in the Publish pane of the WebHelp SSL dialog box are cleared when you make changes to other pane and don't view the server settings after that

**Important:**

- After installing the patch, copy the updated *ePub Generator.jsx* script from *[InstallDir]/RoboHTML/presets/scripts/* to the following location:

On Windows XP:

*[USER]/Application Data/Adobe/RoboHTML/9.00/Scripts/Sample Scripts/*

On Windows 7:

*[USER]/AppData/Roaming/Adobe/RoboHTML/9.00/Scripts/Sample Scripts/*

- Uninstalling Adobe RoboHelp 9 from Add/Remove Programs removes RoboHelp 9.0.1 also.
