Installing the Quick Fix

Important: This quick fix must be installed on a system with LiveCycle ES 8.0.1 SP2 already installed. This quick fix addresses and issue that occurs during the upgrade from LiveCycle 7.x to LiveCycle ES, ensure this quick fix is installed before running the upgrade steps.

To install the quick fix:

1. Stop the Application Server.
2. Extract the archive file to your hard drive.
3. In the directory named according to the operating system that you are using, open adobe_livecycle_8_0_qf.bin or adobe_livecycle_8_0_qf.exe. This launches an install wizard that guides you through the installation.
4. Select the language to use in the install wizard and click **OK**.
5. On the Welcome panel, click **Next**.
6. Either accept the default Adobe LiveCycle ES product directory or click **Browse** to select a different location, and then click **Next**.
7. Read the Quick Fix Summary information and click **Next**.
8. Read the additional Quick Fix Summary information and click **Install**.
9. When the installation is complete, click **Next** to apply the quick fix updates to your installed files.
10. When the quick fix installation is complete, click **Finish** to exit the wizard.
11. Navigate to the `[LiveCycleES root]/configurationManager/bin` directory and invoke `configurationManager.bat/sh` to launch LiveCycle Configuration Manager.
12. In the wizard, ensure "Upgrade from LiveCycle 7.x" is selected. When "Upgrade from LiveCycle 7.x" is selected, you are presented with 3 sub options. Ensure you select only the first of the three sub options: "Apply LiveCycle 7.x configuration to LiveCycle ES". If your system has not been upgraded from LiveCycle

7.x, then you can leave "Upgrade from LiveCycle 7.x" unselected.

13. Follow the wizard instructions to complete the configuration, ensuring to select "Custom" install and do not select the task in LCM for initializing the database.
