Complete  
Asset  
Management

## One Suite Solution

Save time. Increase profits.  
Empower your team today.

## HandiAsset

Asset management has never been easier

HandiAsset is a feature-rich asset management package that simplifies the setup, tracking and depreciation of assets. Asset purchase, sale and depreciation journals automatically transfer into HandiLedger.

HandiAsset manages and tracks assets, recording: serial numbers, location, photo ID, insurance details, service history and maintenance reminders. HandiAsset integrates with HandiLedger, making it the perfect asset management package for your clients' businesses.

The screenshot displays three overlapping windows from the HandiAsset software:

- Asset Classifications:** Shows a tree view of depreciation schedules. Under 'Motor Vehicles', there are sub-categories for 'Sydney' and 'Melbourne'. A table lists assets with columns for ID and Description:

ID	Description
2	Ford Falcon
3	Holden Commodore
4	Toyota Corolla
5	Forklift
- Depreciation Comparison Report:** A dialog box with tabs for 'General', 'Classifications', and 'Method'. It includes fields for 'Period range' (From 1 to 12), 'Classification Order' (ID selected), and 'Asset Order' (ID selected).
- Asset:** A detailed view for a 'Forklift' asset. It shows 'Description 5: Forklift', 'Historical Cost: 17,850.00', and 'Historical Date: 20/05/2010'. It also includes fields for 'Depreciation Schedule' (Motor Vehicles), 'Location' (Sydney), 'Disposal Amount' (0.00), and 'Disposal Date'. A 'More' sidebar on the right lists various asset-related actions like Depreciation, Physical, Purchase, Repairs, Insurance, etc.

HandiAsset can operate independently from the rest of the HandiSoft suite, making it particularly effective for medium and large companies requiring a comprehensive asset management system.

### Key features:

- New assets can be entered in seconds using the asset setup wizard. This guides you through the creation of an asset and allows you to enter details pertaining to the asset's repairs and service, insurance, physical description, etc.
- HandiLedger depreciation schedules may be converted into HandiAsset.
- HandiAsset includes default depreciation rates set by the ATO.
- An unlimited number of depreciation methods may be set up for each asset, allowing you to forecast or simulate depreciation.
- You can calculate depreciation over varying periods (e.g. weekly, quarterly, monthly, annually, or more).
- Uses prime cost or diminishing value depreciation methods.
- You can create multiple depreciation schedules. Journal entries can automatically be created in HandiLedger to record addition, disposal and depreciation details of the assets.
- Depreciation may be apportioned for private usage.
- HandiAsset prints customised asset labels displaying the precise information you need.
- Digital photographs of assets can be attached to asset records.
- HandiAsset can issue reminders when asset insurance premiums are due, when assets are due for service, or prior to the expiry of warranties.
- You can create your own hierarchical customised asset classification systems.

### One Suite Solution

- Client Relationship Management
- Document Management
- Taxation & ELS
- Billing & Practice Management
- Client Accounting
- Online Business Accounting
- SMSF Compliance
- Jobflow Management
- Payroll Processing
- Trust Bank Accounting
