Retail Point of Sale

***An end-to-end retail
management solution***

FOR MID-MARKET ORGANISATIONS

Retail point of sale systems, where customer credit or debit cards are swiped for payment, are one of the most frequently used computing systems in the developed world. With so many options available you may find it difficult to decide on one. We've developed our Retail Point of Sale module with the retail business environment in mind, keeping your security concerns a top priority. Our module tracks your sales, payments, returns, inventory, lay-bys and cash with a capability to run more complex scenarios too. It's fast, easy to use and scalable.

Key Features and Benefits

- Our Retail POS solution can be configured to cater for a single store or multiple stores (branches) to provide a decentralised or centralised view of your operations.
- It offers seamless integration with Sage Evolution allowing the till users to have real time access to live product quantity, prices and customer information.
- The module offers touch screen compatibility with a customised onscreen keyboard to create a user friendly environment for daily sales operations.
- The promotional pricing feature is a flexible yet enticing feature to attract consumer spending through various discount and value offers.
- Definable user access rights aid in the control of how retail transactions are processed. Make use of user logon via biometrics' and electronic card devices to provide further control.
- Control daily cash ups that ensure accountability and responsibility amongst the till operators and makes the reconciliation process a breeze.

Other Features

- Tracking of serial and lot items
- Barcode scanning
- Variable barcode scanning
- Line and docket discounts by value or percentage
