

*Fast Innovation  
requires Fast IT*

# Building the Internet of Things

# It's Huge, but What Is It?

# IoT World Forum Architecture Committee

---

# Basic Premises

---

## Devices

send and receive data interacting with the

## Network

where the data is transmitted, normalized, and filtered using

## Edge Computing

before landing in

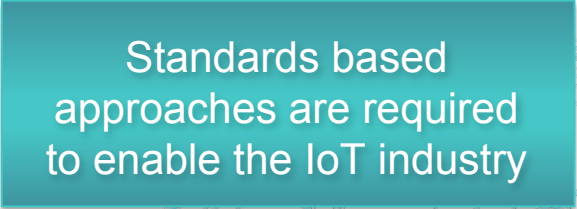

## Data storage / Databases

accessible by

## Applications

which process it and provide it to people who will

## Act and Collaborate

Standards based approaches are required to enable the IoT industry

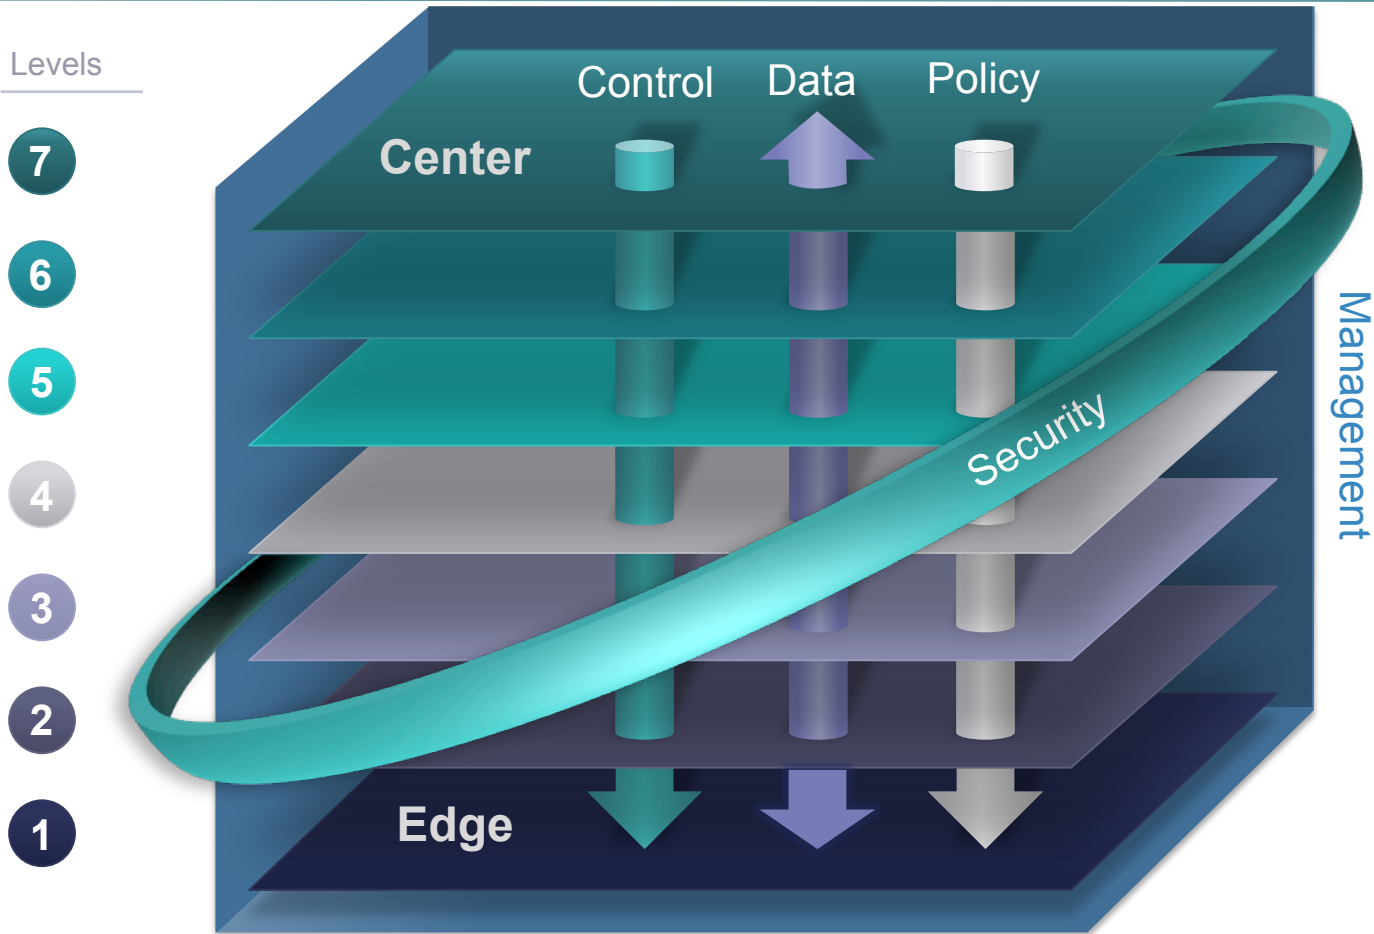

# Internet of Things Reference Model

## Levels

- 7 Collaboration & Processes**  
(Involving People & Business Processes)
- 6 Application**  
(Reporting, Analytics, Control)
- 5 Data Abstraction**  
(Aggregation & Access)
- 4 Data Accumulation**  
(Storage)
- 3 Edge Computing**  
(Data Element Analysis & Transformation)
- 2 Connectivity**  
(Communication & Processing Units)
- 1 Physical Devices & Controllers**  
(The “Things” in IoT)

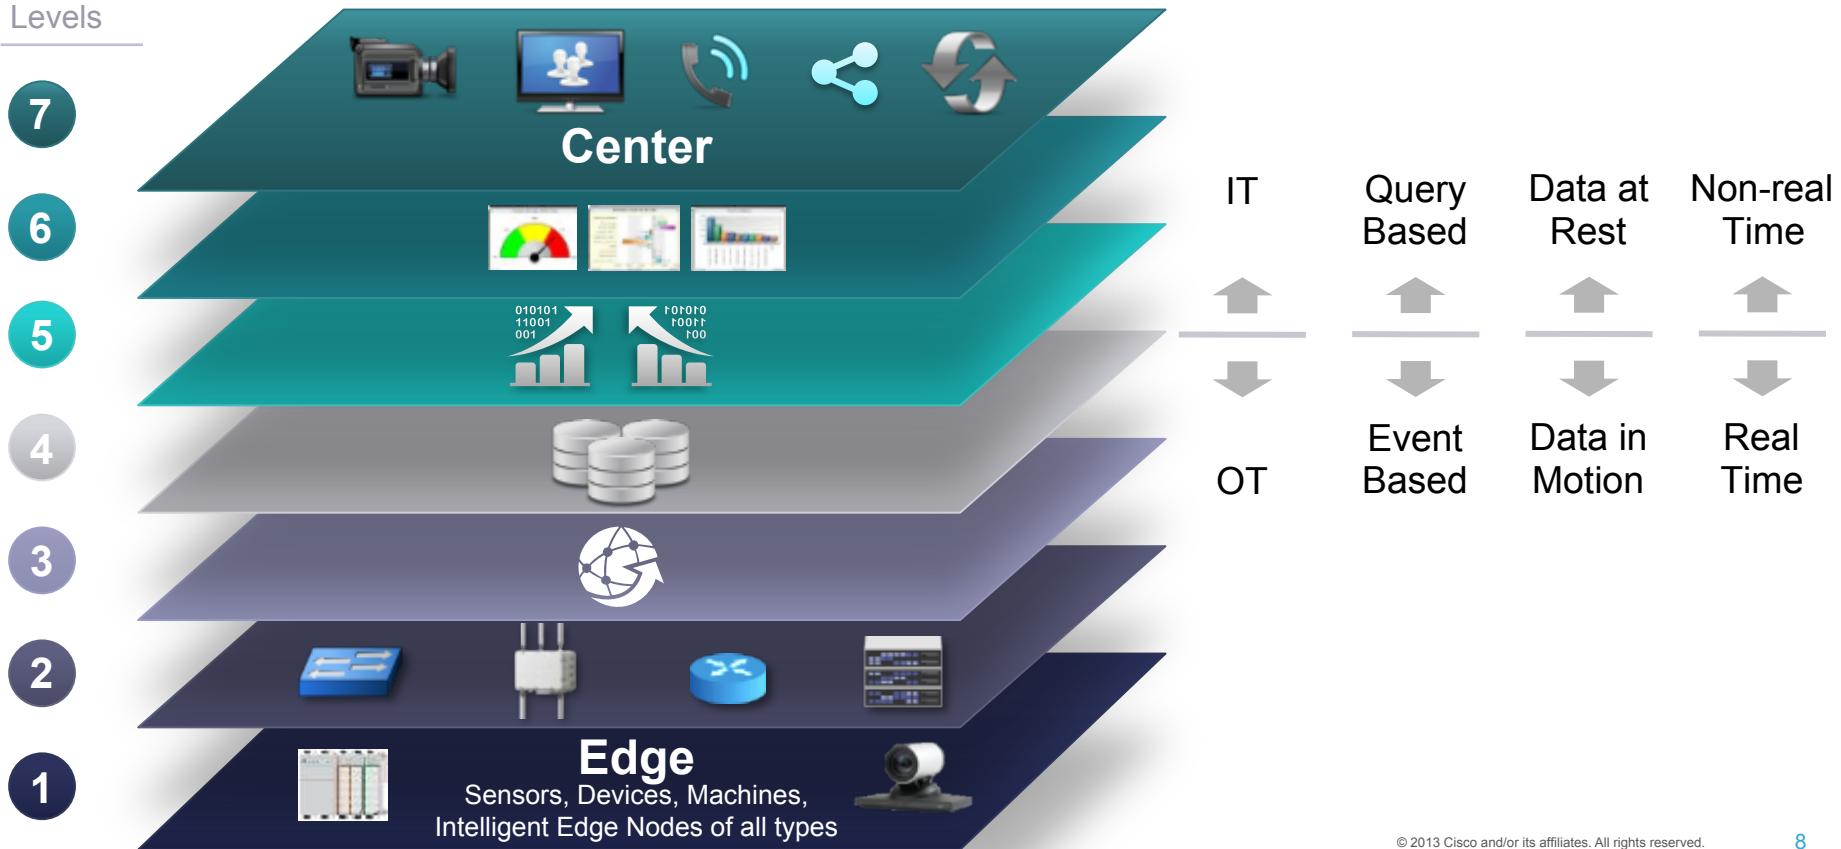

# Internet of Things Reference Model

The model  
is based on  
“Information  
Flow”

# Internet of Things Reference Model Objectives

# Bridging IT and OT

Levels

Edge

Sensors, Devices, Machines,  
Intelligent Edge Nodes of all types

Key Point:  
IT – OT

# Bridging IT and OT: Introducing IoT “Edgeware”

## Device Control

- Configure (from the device provider)
- Status (from the device provider)

## Device Interactions

- Discovery
- Addressing
- Protocol conversion

## Middleware

- Listeners (Zigbee), brokers (MQTT)
- Event grouping / batch interactions

## Data

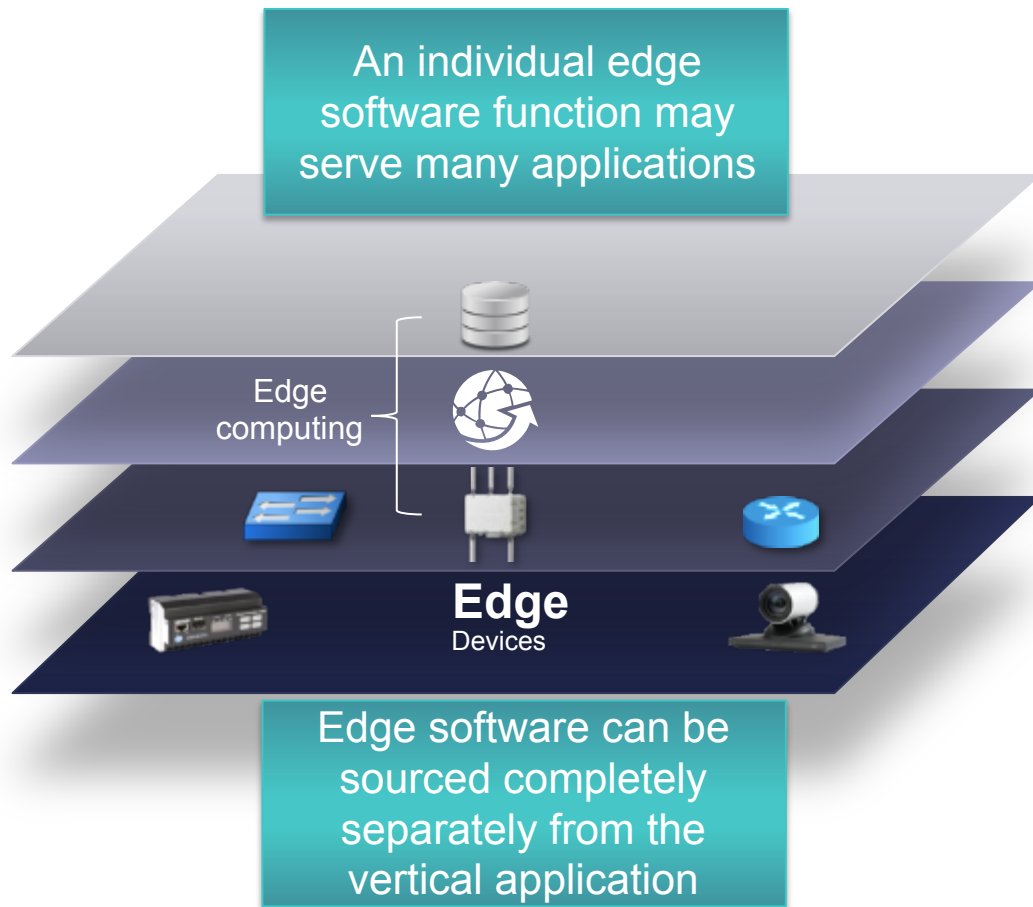

- Normalize (standardize codes for the app)
- Filter (against pre-set criteria from the app)
- Expand (decode/expand cryptic codes)
- Aggregate (generate statistics)
- Notify/alert (to the app)

## Combine the functions above

- Schedule (when to comm with the device)
- BPM (when multiple steps are needed)

## Security

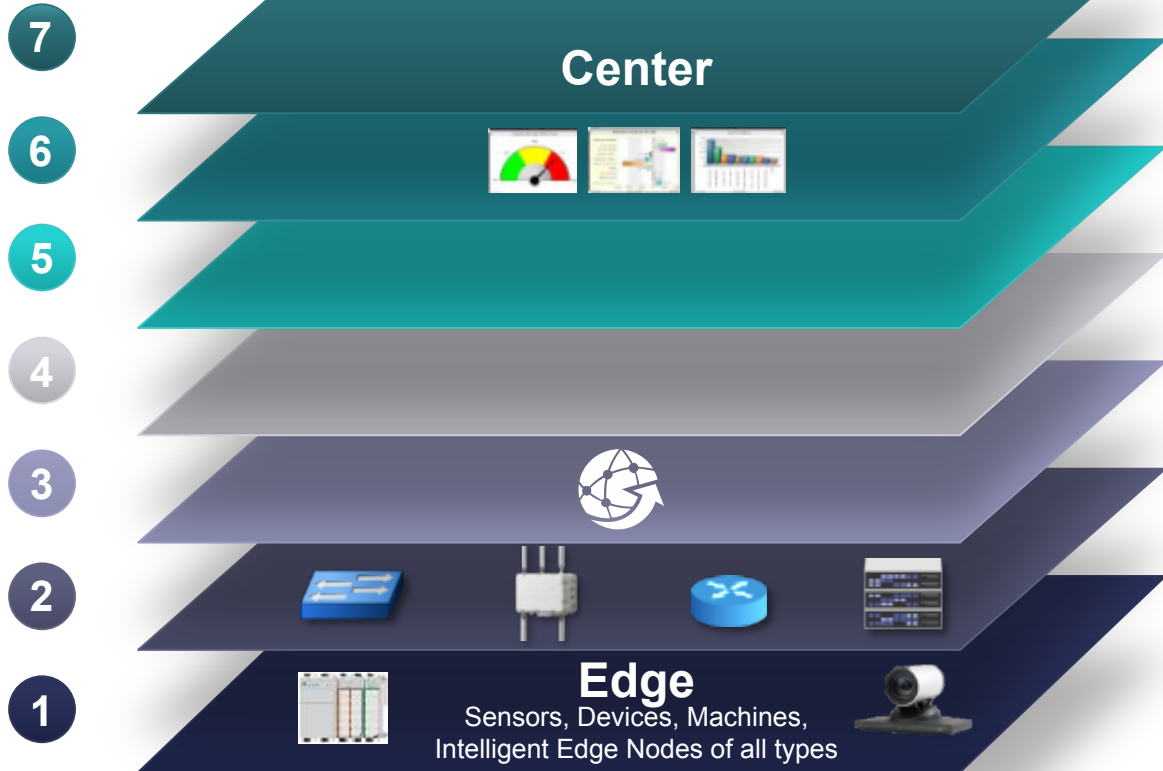

- Roles
- Privileges

# Bridging IT and OT: Handling the Volume of Data

Levels

Issue: Devices may generate data faster than apps can ingest it

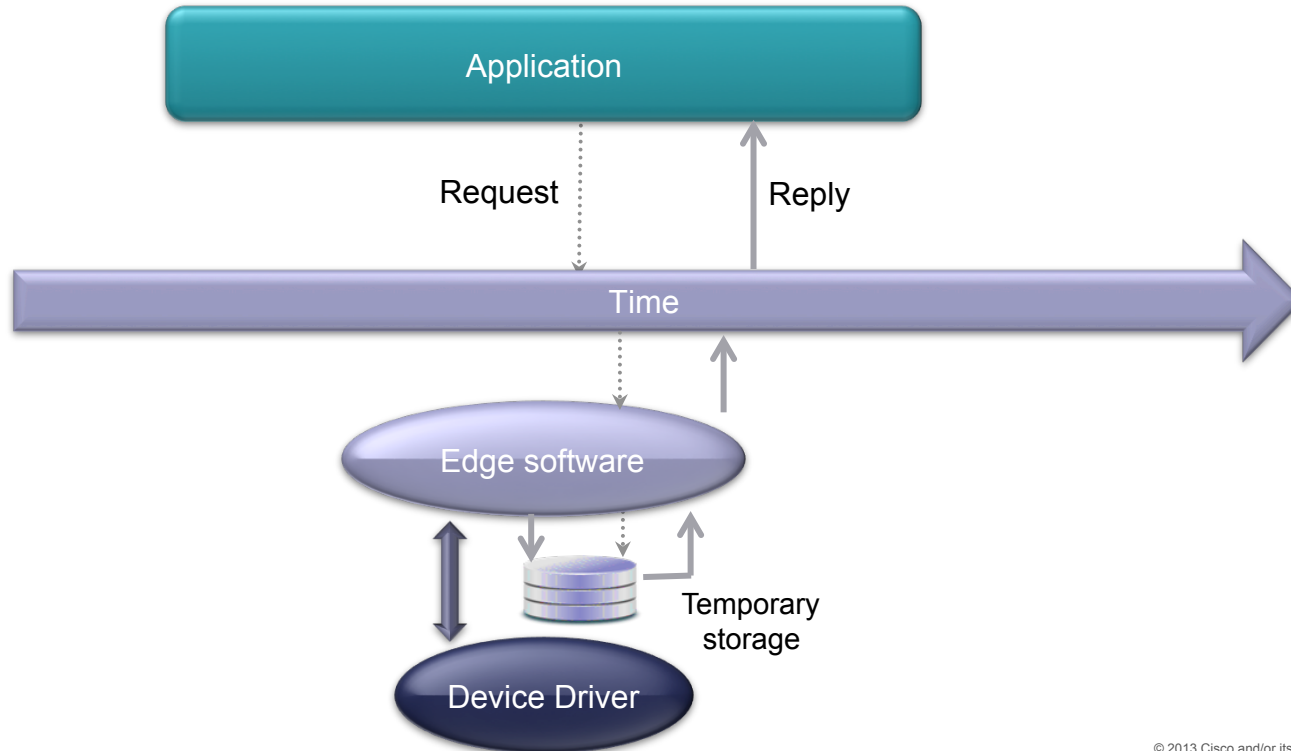

Apps

Devices

# The “Cache and Batch” Sequence Pattern (decouple the application from the data capture)

---

# Interoperability: Enable Edgware and Applications from Different Vendors

Levels

- Key Points:
- IT – OT
  - Decoupling
    - Scalability
    - Agility
  - Interoperability

# Acknowledgement to the IoT “Edge” Software Vendors

---

# Interoperability: The Next Step is Defining Interfaces, Prototyping, and Testing

# Embracing Legacy Applications

Levels

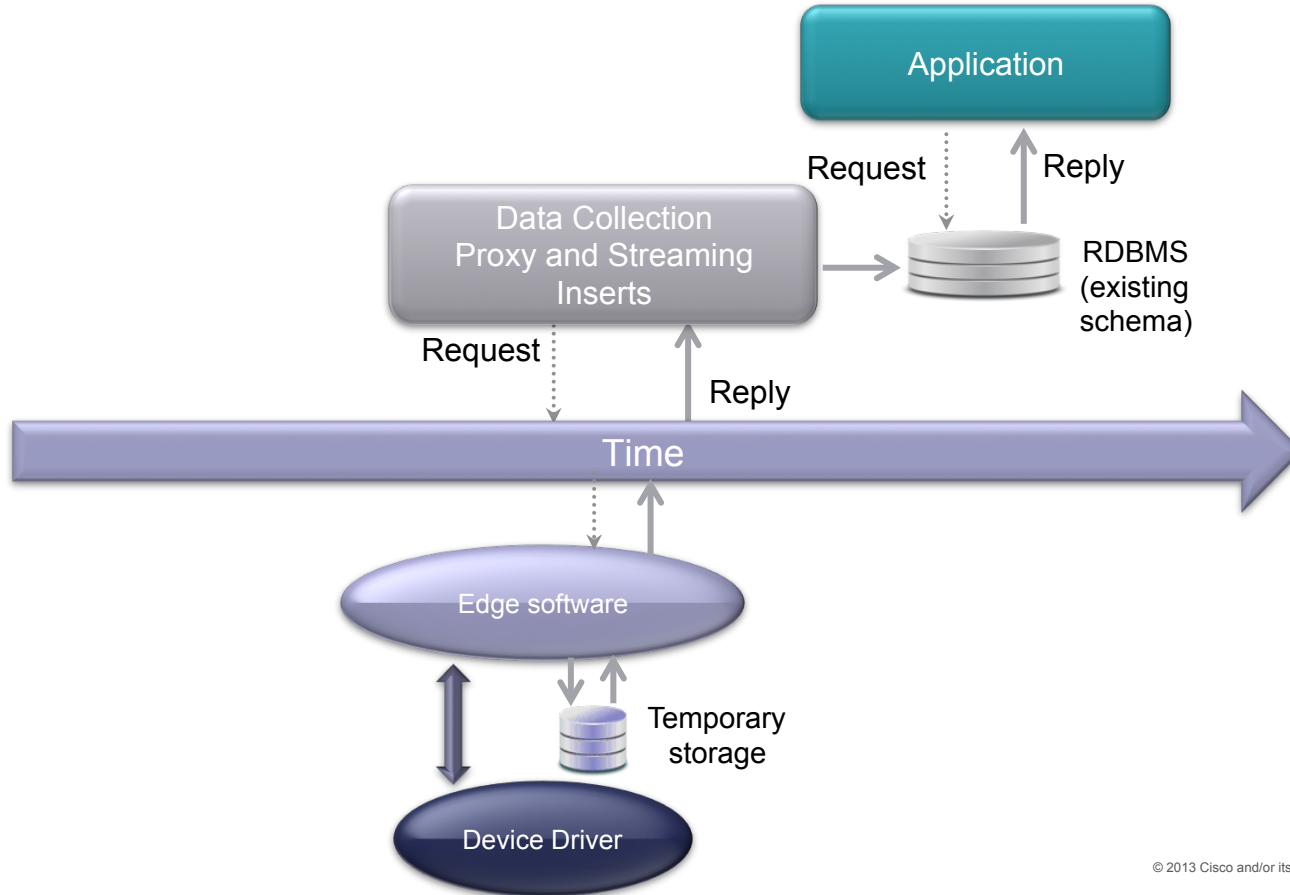

Key Point:

- IoT Enablement of Legacy Applications

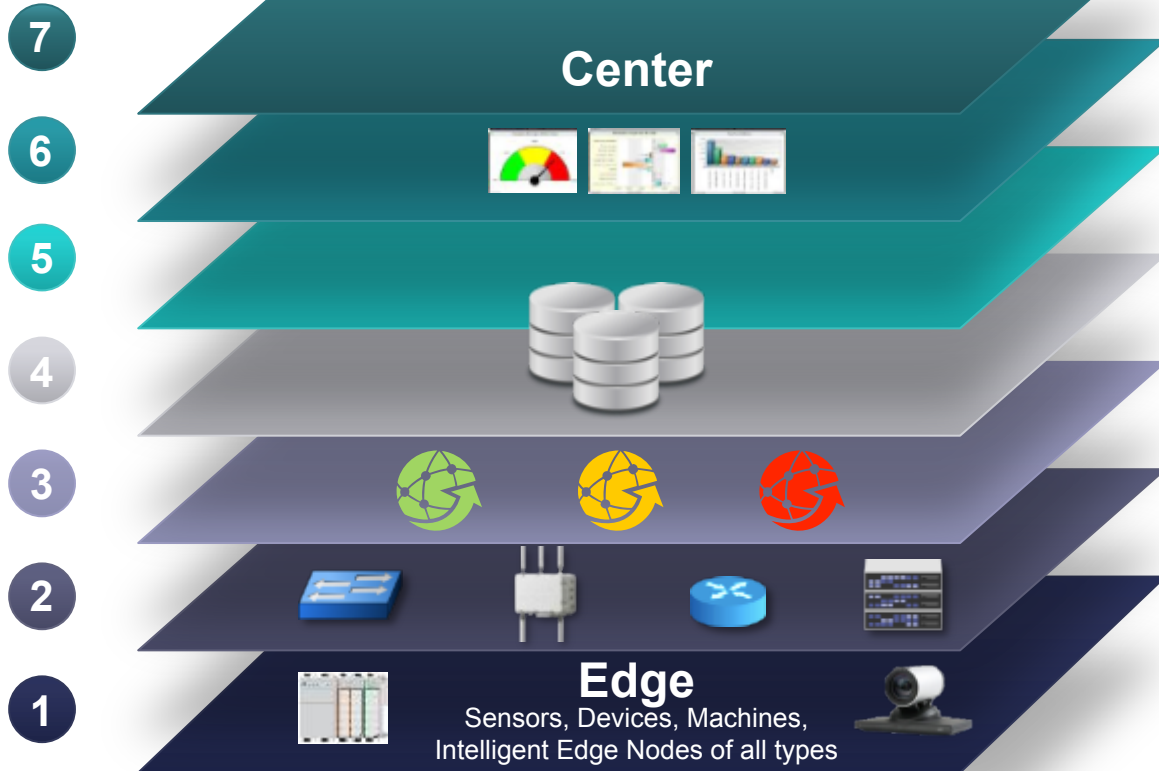

# The Legacy Application Compatibility Sequence Pattern (use the existing DB and schema)

# Internet of Things Reference Model

Levels

## Key Points:

- IT – OT
- Decoupling
  - Scalability
  - Agility
- Interoperability
- Legacy Compatibility

# The Internet of Things and Analytics

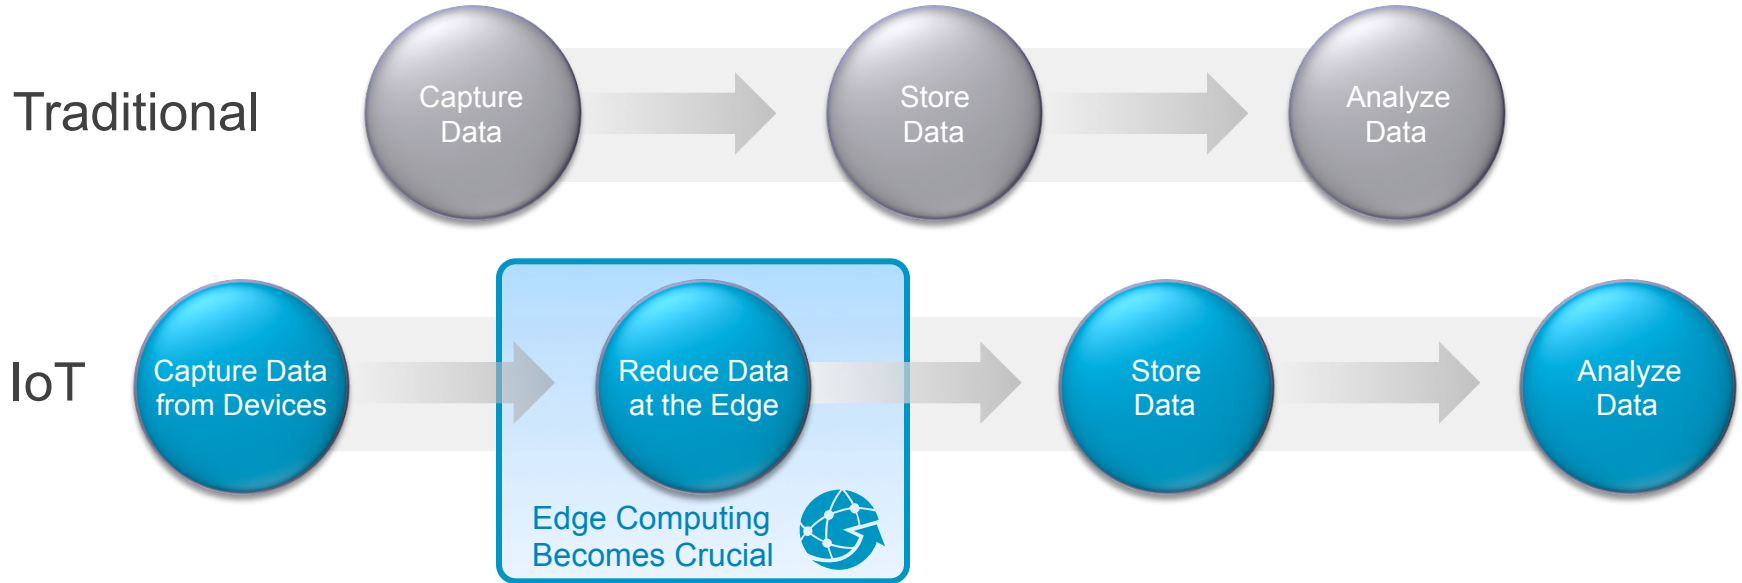

Levels

Key Point:

- Enabling IoT Analytics

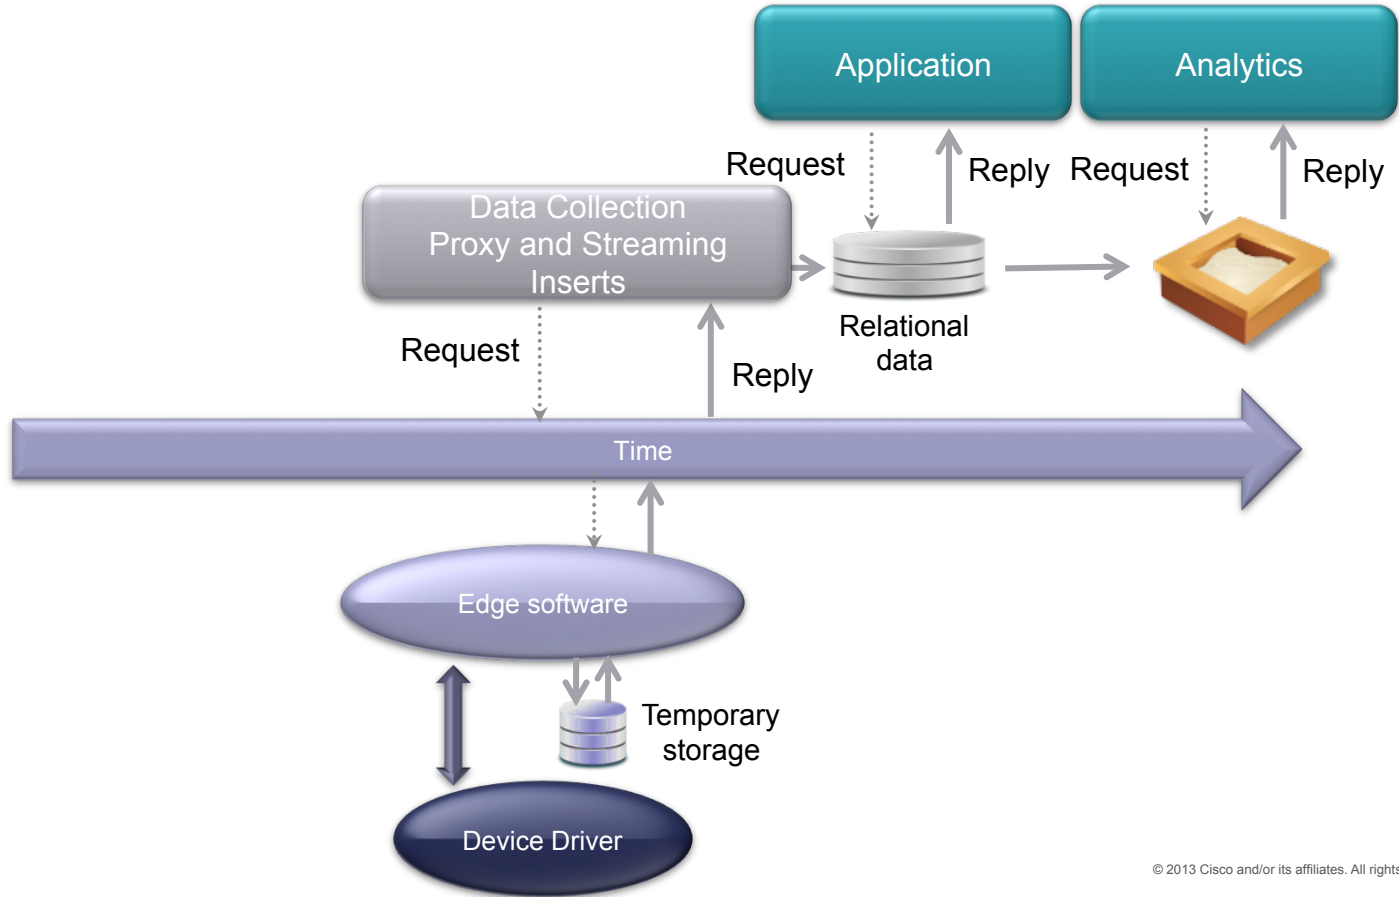

# IoT Analytics Introduces New Complexities to Analytics

## Key Issues:

- The velocity and volume of data may be huge
- In some cases, most of the data is unimportant

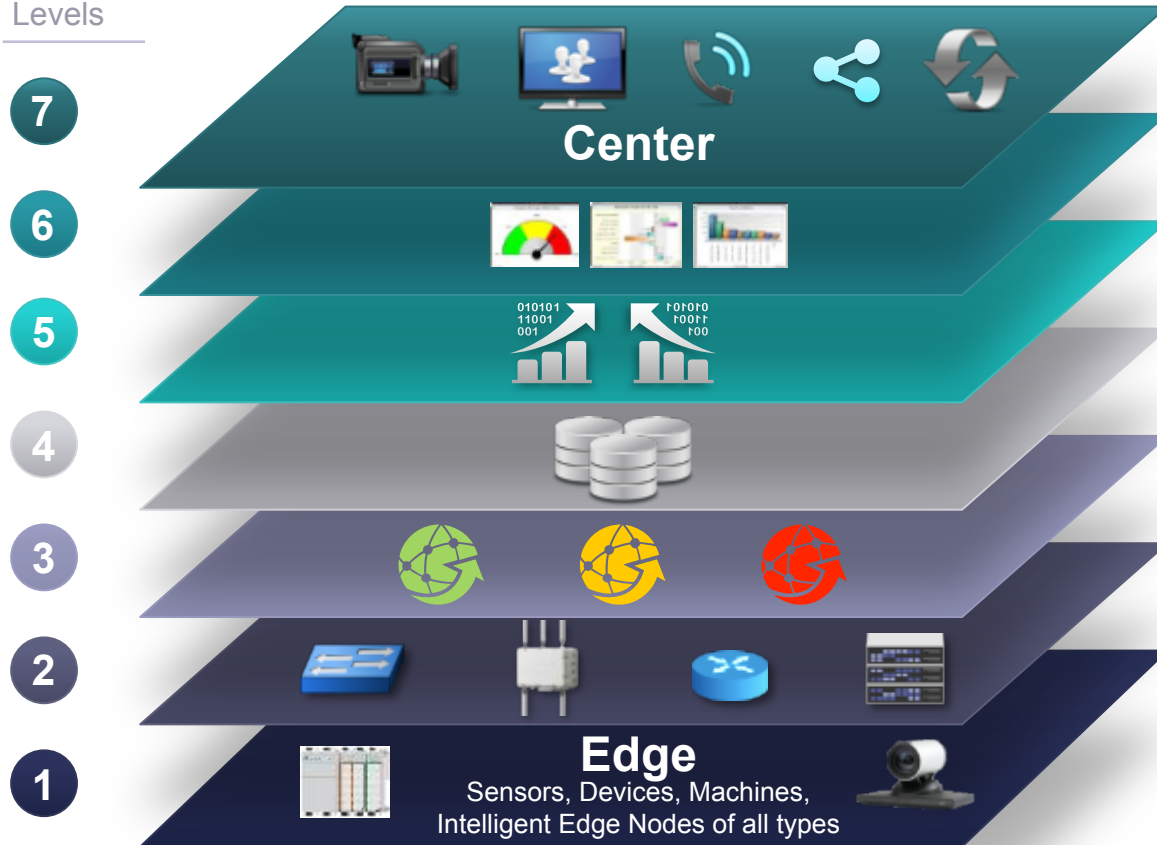

# Sampling and Analytics Sequence Pattern

# Analytics Using Both OT and IT Data

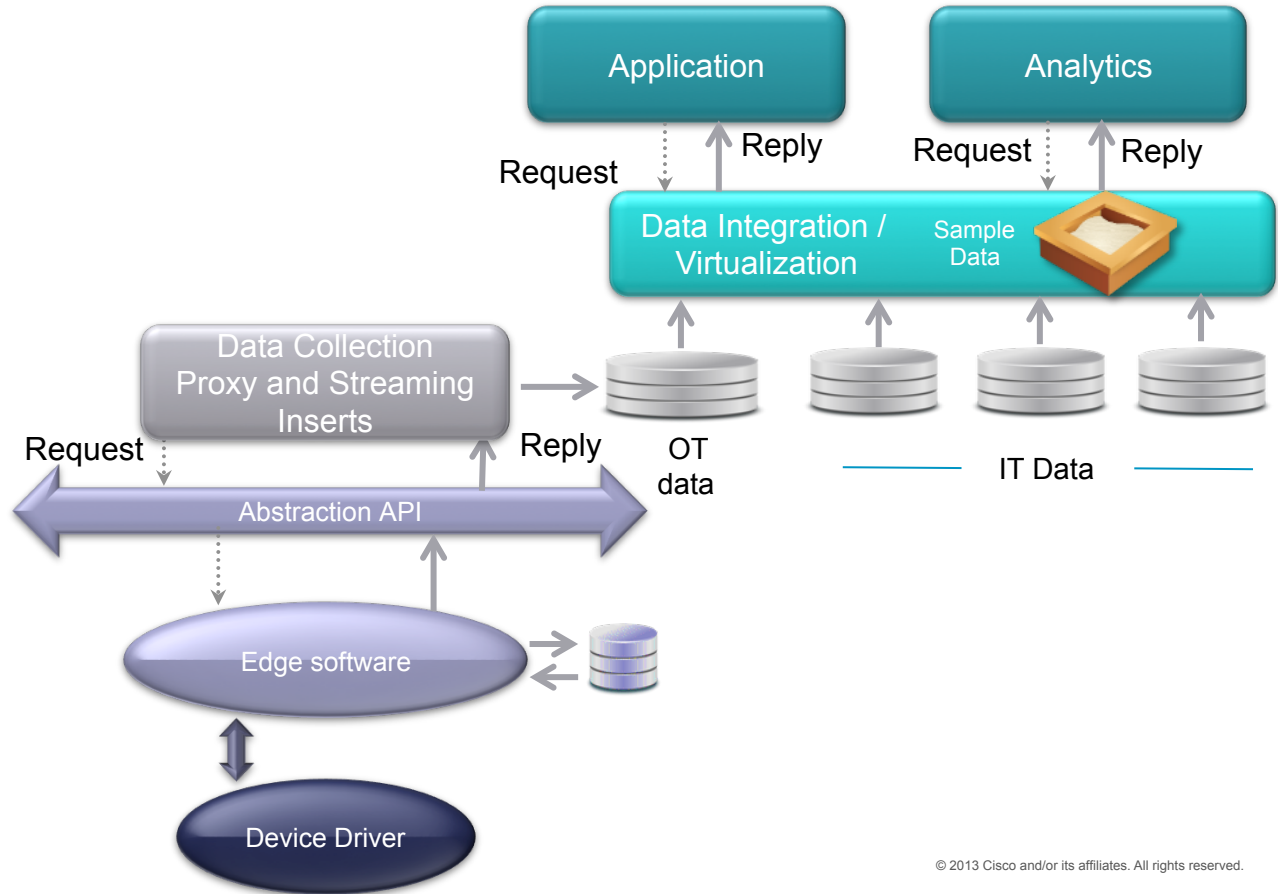

Levels

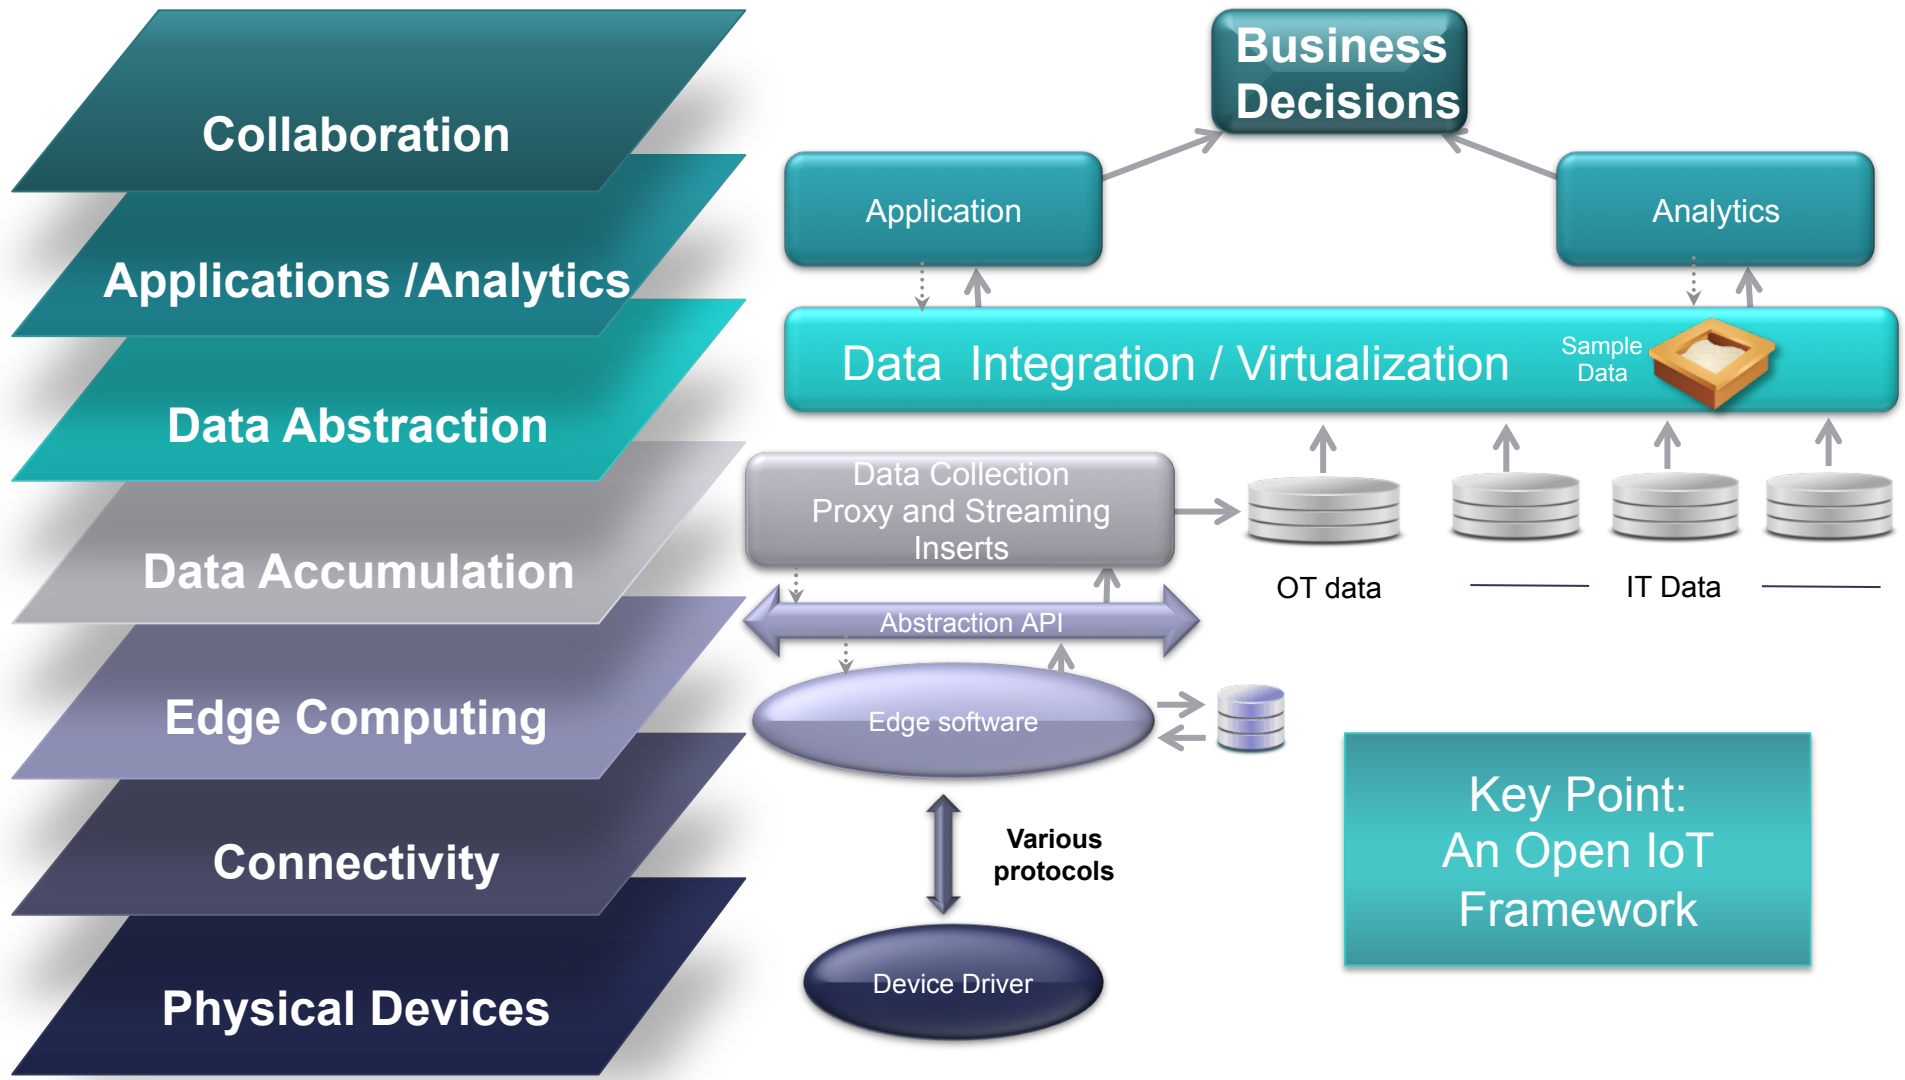

Key Point:

- Integration with the Enterprise

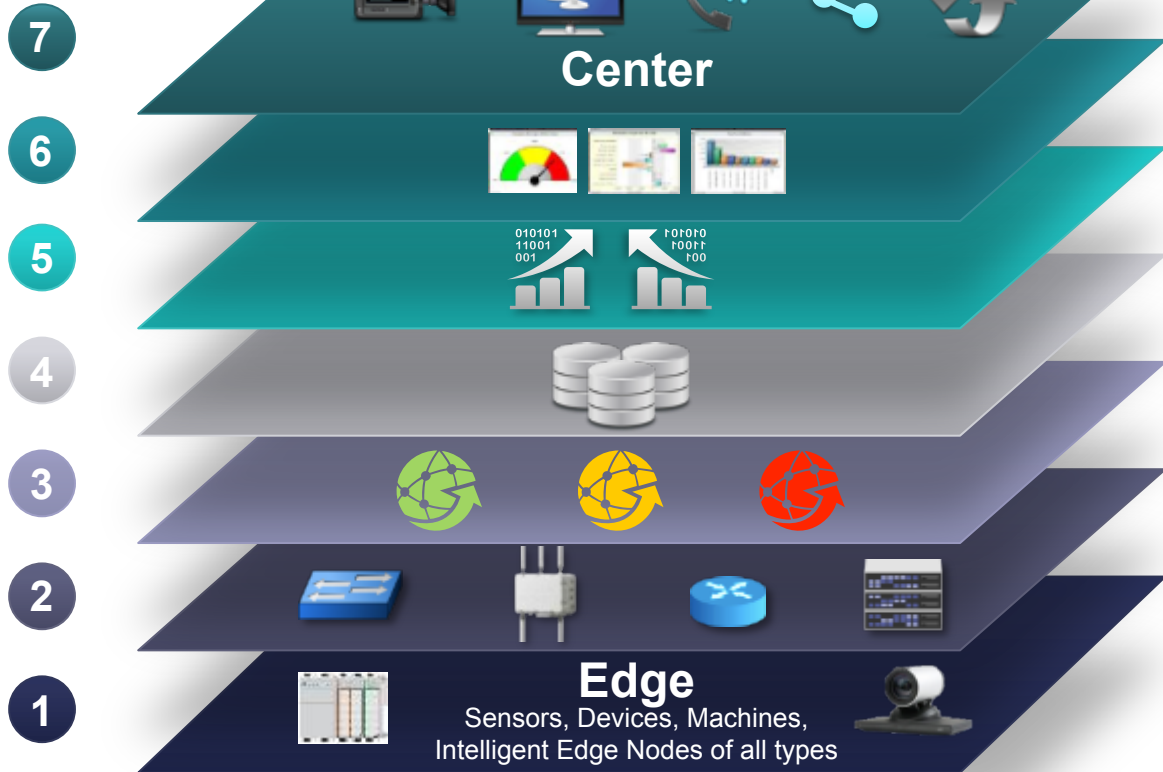

# These “Sequence Patterns” Help Us Define the “Abstraction API”

# The Complete IoT System

Levels

## Key Points:

- IT – OT
- Decoupling
  - Scalability
  - Agility
- Interoperability
- Legacy Compatibility
- Analytics
- Integrated with the Enterprise

*Thank you.*
