## Other Unity Connection Features

Users can live reply to a message using the touchstone conversation or the voice-recognition conversation. Consider informing users when you enable this feature, because even when it is enabled, the live reply option is not mentioned in the main phone menus for some phone conversation types.

The following points to be considered for live reply to users:

-

# CHAPTER 4

## Users

---

### Introduction

If you do not see the user alias listed in

Step 4

- If the user account that you are deleting is for a user who is listed as a caller in a personal call transfer

# CHAPTER 5

## Contacts

---

Contacts are similar to users without mailboxes; however, they have a phone extension, but no voicemail or administrative rights on Cisco Unity Connection and frequently communicates with the users.

If a Voice Profile for Internet Mail (VPIM) user is

Step 4

- **Play Oldest Message First:** This indicates the order in which broadcast messages are presented to users. By default, the check box is checked that plays the oldest message first. To play the newest message first, uncheck the check box.

## Integrated Messaging

The model of messaging in which there are separate user accounts handle the voicemails and emails for a user is known as integrated messaging. The emails for a user are managed through the user mailbox on

- Configure the corporate email address of each user as an SMTP proxy address for the user. When setting up the Unity Connection IMAP account on us

The **Import Users** tool is used to add new Unity Connection users by importing the user data from an LDAP directory. For more information, see the [Creating Unity Connection Users from](#)

## Filtering LDAP Users

- To extend the SpeechView functionality, users who want to transcribe the voice messages left on their personal number must configure their personal phones to forward calls to Unity Connection

- If the server is going to access transcription services through another location that is digitally networked, do the given steps:
  - a. Select **Access Transcription Service Directly** field.
  - b. In the

## CHAPTER

### SMS Message Length Limitations

The acceptable message length for an SMS message varies depending on the service provider, the character set used to compose the message text, and the specific characters used in the message text.

Character sets available include:

- Default alphabet (GSM 3.38), 7-bit characters
-

## Setting Up an SMPP Provider

- 
- Step 1** In Cisco Unity Connection Administration, expand **System Settings > Advanced**, then select **SMPP Providers**.
  - Step 2** On the Search SMPP Providers page, select **Add New**.
  - Step 3** Enable the new provider and enter the Name, System ID and Hostname of the provider and **Save**. For more information on settings, select **Help > This Page**.
  - Step 4** On the Edit SMPP Provider page, enter the **Port**, which is the TCP port number that is used by the SMSC to listen for incoming connections.

---

**Note** The port number should be in range of >100 and <=99999.

---

## Setting Up HTML Message Notification

The HTML notification is triggered based on the HT

## Configuring the Authenticated and Non-Authenticated Mode

If the administrator has created a template that includes images, icons, or status items, then the **authentication mode** ensures that the user authenticates with the Unity Connection credentials before the images are displayed in an email notification.

The **non-authentication mode** does not prompt user for credentials and the embedded images or icons

## User Template Basics

The Edit User Template Basics page allows you to specify the settings, such as alias and first name associated with a particular user template.

## User Basics

The Edit User Basics page allows you specify the settings, such as alias and first name associated with a particular user account.

Consider the following points while changing the alias of a user:

- If you change the alias for a user, Unity Connection automatically creates an SMTP proxy address for the previous alias. This allows the other Unity Connection users to reply to the messages that were sent from the previous alias but the replies automatically reach to the new alias of the user.
- When Unity Connection is integrated with an LDAP directory, the Alias field cannot be changed for
