

Cisco Ransomware Defense: Keep Ransomware at Bay

What if you could stay safer from ransomware, however it may attempt to get in? Only Cisco gives you the security products and architecture to do so.

Overview

Files and information are the lifeblood of an organization. Keeping this information—and your organization's productivity—intact and secure is nonnegotiable.

But in comes ransomware, malicious software, or malware, that locks up the information on a individual's or an organization's computer like

.
